

BANCO SANTANDER CHILE
INTERIM CONSOLIDATED FINANCIAL STATEMENTS
For the periods ending on June 30, 2026, and 2025 and
December 31, 2025

INDEPENDENT AUDITOR'S REVIEW REPORT

Santiago, July 28, 2026

To the Shareholders and Directors
Banco Santander-Chile

Introduction

We have reviewed the accompanying interim consolidated statement of financial position of Banco Santander-Chile and subsidiaries as of June 30, 2026, and the related interim consolidated statements of income and other comprehensive income for the three- and six-month periods ended June 30, 2026, the interim consolidated statements of changes in equity and of cash flows for the six-month period then ended, and the notes to the interim consolidated financial statements, including information on significant accounting policies. Management is responsible for the preparation and fair presentation of this consolidated financial information in accordance with the accounting standards and instructions issued by the Financial Market Commission. Our responsibility is to express a conclusion on this interim consolidated financial information based on our review.

Scope of the review

We have conducted our review in accordance with the Standard on Review Engagement 2410 "Review of interim financial information performed by the independent auditor of the entity". A review of interim financial information consists mainly of making inquiries with those responsible for financial and accounting matters, as well as applying analytical procedures and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Generally Accepted Auditing Standards in Chile, and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Consequently, we do not express an audit opinion.

Conclusion

Based on our review, we have not become aware of any matter that causes us to believe that the accompanying interim consolidated financial information does not present fairly, in all material respects, the interim consolidated financial position of the entity as of June 30, 2026, its results for the three- and six-month periods ended June 30, 2026, and its cash flows for the six-month period then ended, in accordance with the accounting standards and instructions issued by the Financial Market Commission.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 01 - CORPORATE INFORMATION

Banco Santander-Chile is a banking corporation organized under the laws of the Republic of Chile, supervised by the Financial Market Commission (FMC). It is also subject to the regulations of the Securities and Exchange Commission of the United States of America (SEC), considering the Bank is listed on the New York Stock Exchange (NYSE) through an American Depositary Receipt (ADR) program.

Banco Santander Spain controls Banco Santander Chile through its shareholdings in Teatinos Siglo XXI Inversiones S.A. and Santander Chile Holding S.A., both subsidiaries controlled by Banco Santander Spain. As of June 30, 2026, Banco Santander Spain directly or indirectly owns 99.8% of Santander Chile Holding S.A. and 100% of Teatinos Siglo XXI Inversiones S.A., which allows Banco Santander Spain control over 67.18% of the Bank's shares.

The Bank provides its clients with a wide range of general banking services, from individuals to large corporations. In addition, Banco Santander-Chile and its affiliates (collectively referred to as 'Bank' or 'Santander-Chile' hereafter) offer consumer and commercial banking services, as well as other services, including factoring, collections, leasing, securities and insurance brokerage, brokerage of mutual and investment fund and investment banking.

The Bank's legal address is Calle Bandera No 140 Santiago de Chile, and its website is www.santander.cl.

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

1. Preparation basis

These Interim Consolidated Financial Statements have been prepared following the Compendium of Accounting Standards for Banks (CASB), in its version applicable as of January 2022, as well as the instructions issued by the FMC. The FMC, under Law No 21,000, provides in numeral 6 of article 5 that the Financial Market Commission may set the rules for the preparation and presentation of the annual reports, balance sheets, statements of financial position and other financial statements of the supervised entities and determines the principles according to which companies must keep their accounts. Regarding all matters that are not covered by this regulation, if they do not conflict with its instructions, then they must adhere to generally accepted accounting criteria corresponding to the technical standards issued by the Chilean Association of Accountants AG, which coincide with the International Financial Reporting Standards (IFRS) agreed by the International Accounting Standards Board (IASB). In case of discrepancies between the accounting principles and the accounting criteria issued by the FMC in its Compendium of Accounting Standards for Banks and instructions, the latter shall prevail.

The Bank uses certain currency terms and conventions for these Interim Consolidated Financial Statements. Thus, 'USD' stands for 'US dollar', 'EUR' stands for 'euro', 'CNY' stands for 'Chinese yuan', 'JPY' stands for 'Japanese yen', 'CHF' stands for 'Swiss franc', 'AUD' stands for 'Australian dollar' and 'UF' stands for 'Unidad de Fomento de Chile'.

The notes in the Interim Consolidated Financial Statements contain information in addition to that presented in the Interim Consolidated Statements of Financial Position, Interim Consolidated Statements of Income, Interim Consolidated Statements of Other Comprehensive Income, Interim Consolidated Statement of Change in Equity and Interim Consolidated Statement of Cash Flows. They provide narrative descriptions or disaggregation of such states in a clear, relevant, reliable and comparable manner.

2. Preparation of the Interim Consolidated Financial Statements

The Interim Consolidated Financial Statements as of June 30, 2026, and 2025, and December 31, 2025 incorporate the individual financial statements of the Bank and its controlled entities (affiliates) and include the adjustments, reclassifying and eliminations necessary to comply with the accounting and measurement criteria established by IFRS 10 'Consolidated Financial Statements'. Control is achieved when the Bank:

- i. Has power over the investee (that is, it has rights that grant it the present capacity to manage the relevant activities of the investee);
- ii. Has exposure or rights to variable returns from its involvement with the investee; and
- iii. Has the ability to use its power over the investee to influence the amount of the investor's returns.

The Bank reassesses whether it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control listed above. For example, when the Bank has less than most of the voting rights in an investee, but those voting rights are sufficient to have the ability to direct the relevant activities, then it is concluded that the Bank has control. The Bank considers all relevant facts and circumstances in assessing whether the Bank's voting rights in an investee are sufficient to give it power. These include:

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

- The size of the Bank's holding of voting rights relative to the size and dispersion of holdings of the other vote holders.
- The potential voting rights held by the Bank, other vote holders or other parties.
- The rights arising from other contractual agreements.
- Any additional facts and circumstances that indicate that the Bank has or does not have the current ability to direct the relevant activities when decisions need to be made, including voting patterns at previous shareholders' meetings.

Consolidation of a subsidiary begins when the Bank obtains control of the subsidiary and ceases when the Bank cedes control. Specifically, the income and expenses of a subsidiary acquired or disposed of during the period are included in the Interim Consolidated Statements of Income and Interim Consolidated Statements of Other Comprehensive Income from the date the Bank gains control until the date the Bank ceases to control the subsidiary.

Profit or loss alongside each component of the Interim Consolidated Statements of Other Comprehensive Income is attributed to the Bank's holders and non-controlling interest. The total comprehensive income of subsidiaries is attributed to the owners of the Bank and the non-controlling interests, even if this results in the non-controlling interests having a deficit in certain circumstances. When necessary, adjustments are made to the financial statements of the subsidiaries to ensure their accounting standards are consistent with the Bank's accounting standards. All balances and transactions between consolidated entities are eliminated.

Changes in the consolidated entities' participation that do not result in the loss of control are accounted for as equity transactions. Accordingly, the book value of the Bank's equity holders and the non-controlling interests are adjusted to reflect the changes in participation over subsidiaries. Any difference between the amount by which the non-controlling interests are adjusted and the fair value of the consideration being paid or received is recognized directly in equity and attributed to the equity owners of the Bank.

The non-controlling interest represents the participation of third parties in the Bank's consolidated equity, which is presented in the Interim Consolidated Statement of Change in Equity. Their share of the result for the year is shown as 'Profit attributable to non-controlling interest' in the Interim Consolidated Statements of Income.

The following table shows the composition of the entities over which the Bank can exercise control and, therefore, form part of the consolidation perimeter:

i. Entities controlled by the Bank through participation in equity

	Main Activity	Place of Incorporation and operation	% of ownership								
			As of June 30, 2026			As of December 31, 2025			As of June 30, 2025		
			Direct	Indirect	Total	Direct	Indirect	Total	Direct	Indirect	Total
Santander Corredora de Seguros Limitada	Insurance brokerage	Santiago, Chile	99.75	0.01	99.76	99.75	0.01	99.76	99.75	0.01	99.76
Santander Corredores de Bolsa Limitada	Brokerage of financial instruments	Santiago, Chile	50.59	0.41	51.00	50.59	0.41	51.00	50.59	0.41	51.00
Santander Consumer Leasing Limitada (*)	Leasing	Santiago, Chile	99.03	-	99.03	99.03	-	99.03	99.03	-	99.03
Santander S.A. Sociedad Securitizadora	Acquisition of loans and issuance of debt securities	Santiago, Chile	99.64	-	99.64	99.64	-	99.64	99.64	-	99.64
Santander Consumer Finance Limitada	Automotive financing	Santiago, Chile	51.00	-	51.00	51.00	-	51.00	51.00	-	51.00

(*) The corporate purpose and corporate name have been modified – Refer to Note 5, Significant Events.

Details of non-controlling interests are shown in Note 28 Equity letter g) non-controlling interest (minority interests).

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued**ii. Entities controlled by the Bank through other considerations and Associates**

The following companies have been consolidated based on the fact that the Bank determines their relevant activities (these are companies complementary to the banking sector) and, therefore, over which the Bank exercises control:

- Santander Gestión de Recaudación y Cobranza Limitada: its exclusive activity is administering and collecting loans.
- Multiplica SpA: its primary purpose is the development of incentive programs that encourage the use of payment cards.

An associate is an entity over which the Bank can exercise significant influence but not control or joint control. This capacity is usually manifested in a 20% or more interest in the entity's voting rights and is accounted for using the equity method in accordance with IAS 28 'Investments in Associates and Joint Ventures'.

The following entities in which the Bank has an interest and are recognized using the equity method are considered 'associates':

Name of associated entity	Main Activity	Place of incorporation and operation	% of ownership		
			As of June 30, 2026	As of December 31, 2025	As of June 30, 2025
Redbanc S.A.	ATM service	Santiago, Chile	33.43	33.43	33.43
Transbank S.A.	Debit and credit card service	Santiago, Chile	25.00	25.00	25.00
Centro de Compensación Automatizado S.A.	Electronic funds transfer and compensation services	Santiago, Chile	33.33	33.33	33.33
Sociedad Interbancaria de Depósito de Valores S.A.	Repository of publicly offered securities	Santiago, Chile	29.29	29.29	29.29
Cámara Compensación de Alto Valor S.A.	Payment clearing	Santiago, Chile	13.72	13.72	13.72
Administrador Financiero del Transantiago S.A.	Administration of smart cards for public transportation	Santiago, Chile	20.00	20.00	20.00
Servicios de Infraestructura de Mercado OTC S.A.	Administration of the infrastructure for the financial market of derivative instruments	Santiago, Chile	12.48	12.48	12.48

In the case of Cámara Compensación de Alto Valor S.A. and Servicios de Infraestructura de Mercado OTC S.A., Banco Santander-Chile has a representative on the Board of Directors, which is why the Administration has concluded that it exercises significant influence.

iii. Share or rights in other companies

Entities over which the Bank has no control or significant influence are presented in this category. These equity instruments must be measured at fair value in compliance with IFRS 9 'Financial Instruments'. Nevertheless, the Bank may consider the cost an appropriate fair value estimate in concrete circumstances. This may be the case if the most recently available information is insufficient to measure the fair value or if a wide range of possible fair value measurements and the cost involved represents the best estimate of fair value within that range.

Additionally, the Bank may make an irrevocable decision to present subsequent changes to the fair value in other comprehensive income during its initial recognition. Subsequent changes in this valuation shall be recognized in 'Accumulated other comprehensive income - Items that will not be reclassified to profit or loss'. Dividends received from these investments are recorded in the Interim Consolidated Statements of Income under 'Result from investments in companies'. These instruments are not subject to the IFRS 9 'Financial Instruments' impairment model.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued**3. Non-controlling interest**

Non-controlling interest represents the portion of net income and net assets the Bank does not own, either directly or indirectly. It is presented separately in the Interim Consolidated Statements of Income and separately from the equity in the Interim Consolidated Statements of Financial Position .

In the case of entities controlled by the Bank through other considerations, profits and equity are presented as a non-controlling interest. This is because the Bank controls them, but has no percentage ownership in them.

4. Reporting segments

The Bank's operating segments are those units whose operating results are reviewed regularly by the highest level of management regarding decision-making. Accordingly, two or more operating segments can be added into one only when the aggregation is consistent with the basic principle under the IFRS 8 'Operating Segments' and if the segments have similar economic characteristics and are alike in each one of the following aspects:

- i. The nature of the products and services.
- ii. The nature of production processes.
- iii. The type of customer category for which its products and services are intended.
- iv. The methods used to distribute their products or provide services.
- v. If applicable, the nature of the regulatory framework, e.g., banking, insurance, utilities.

The Bank reports separately for each operating segment that meets any of the following quantitative thresholds:

- i. Its reported revenues from ordinary activities, including both sales to external clients and inter-segment sales or transactions, equal or exceed 10% of the combined revenues from all operating segments' ordinary internal and external activities.
- ii. The amount of its reported results is, in absolute terms, equal to or greater than 10% of the greater of (i) the combined profit reported by all operating segments that have not reported a loss; and (ii) the combined loss reported by all operating segments that have reported a loss.
- iii. Its assets equal or exceed 10% of the combined assets of all operating segments.

Operating segments that do not meet any of the quantitative thresholds may be considered reportable segments. The information must be disclosed separately if management believes it would be helpful to Interim Consolidated Financial Statements users.

Concerning the above, the Bank's segments were obtained under the consideration that an operating segment is a component of an entity that:

- i. Engages in business activities from which it may earn revenues and incur expenses (including revenues and expenses from transactions with other elements of the same entity).
- ii. Whose operating results are regularly reviewed by the entity's chief executive officer, who makes decisions about resources allocated to the segment and assesses its performance.
- iii. For which separate financial information is available

5. Functional and presentation currency

The Bank, in according to IAS 21 'The Effects of Changes in Foreign Exchange Rates', has defined the Chilean Peso as its functional and presentation currency, as this is the currency of the primary economic environment in which the Bank operates, as well as the currency that influences the cost and revenue structure. Therefore, all balances and transactions denominated in currencies other than the Chilean Peso are considered 'foreign currency'.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued**6. Transaction in foreign currencies**

The Bank conducts transactions in amounts denominated in foreign currencies, mainly US dollars. The assets and liabilities denominated in foreign currencies held by the Bank and its affiliates are translated into Chilean Pesos at the market exchange rate corresponding to the end of the reported month (spot rate), which amounts to \$921.09 per US\$1 for June 2026 and \$931.50 per US\$1 for June 2025 and \$900.69 per US\$1 for December 31, 2025. For all other currencies, an external pricing provider is used.

The net foreign exchange gain and loss includes recognizing the effects of exchange rate changes on assets and liabilities denominated in foreign currencies and the profit and loss on foreign exchange spot and forward transactions undertaken by the Bank.

7. Cash and cash equivalents

The indirect method is used to prepare the Interim Consolidated Statement of Cash Flows, starting with the Bank's consolidated pre-tax income, and then incorporating non-cash transactions, cash-flow-related income, and expense of activities classified as investments or financing.

The following items are taken into consideration in the preparation of the Interim Consolidated Statement of Cash Flows:

- i. Cash flows: inflows and outflows of cash and cash equivalents, defined as balances in items such as deposits with the Central Bank of Chile, deposits in domestic banks and deposits abroad.
- ii. Operating activities: these are the normal activities carried out by banks alongside other activities that cannot be classified as investments or financing.
- iii. Investing activities: these correspond to the acquisition, sale or disposal by other means of long-term assets and other investments not included in cash and cash equivalents.
- iv. Financing activities: those that result in changes to the size and composition of equity and liabilities that are not part of operating or investing activities.

8. Definitions, classification and measurement of financial assets/liabilities**i. Definitions**

A 'financial instrument' is any contract that gives rise to a financial asset in an entity and a financial liability or equity instrument in another entity.

A 'financial asset' is any asset that is: (a) cash; (b) an equity instrument of another entity; (c) a contractual right to receive cash or another financial asset from another entity or to exchange financial assets or financial liabilities with another entity under conditions that are potentially favorable to the entity; or (d) a contract that will or may be settled using the entity's own equity instruments.

A 'financial liability' is any liability that is: (a) a contractual obligation to deliver cash or another financial asset to another entity or to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavorable to the entity; or (b) a contract that will or may be settled using the entity's equity instruments.

An 'equity instrument' is any contract that evidences a residual interest in the assets of the issuing entity after deducting all of its liabilities.

A 'financial derivative' is a financial instrument whose value fluctuates in response to changes concerning an observed market variable (such as an interest rate, a foreign exchange rate, a financial instrument's price, or a market index, including credit ratings), whose initial investment is minimal compared with other financial instruments with a similar response to changes in market factors, and which is generally settled at a future date.

'Fair value' is the price that would be received to sell an asset or paid to transfer a liability in a transaction between market participants at the measurement date.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

ii. Initial recognition

The Bank shall recognize a financial asset or financial liability only when it becomes part of the contractual terms of the instrument (rights and obligations).

A conventional purchase or sale of financial assets shall be recognized using the accounting contract date or settlement date.

iii. Classification of financial assets/liabilities

Classification of financial assets

Financial assets shall be classified into measurement categories based on the entity's business models for managing the financial assets and the contractual cash flow characteristics of said assets.

The business model refers to how the Bank manages its financial assets to generate cash flows. In other words, the entity's business model determines whether the cash flows will come by obtaining contractual cash flows, selling financial assets, or both.

Assessing the contractual flow characteristics (SPPI test) requires determining whether the asset's contractual flows are solely payments of principal on specified dates and interest on the principal outstanding amounts in the currency in which the financial asset is denominated. The principal is the fair value of the financial asset at initial recognition. Nevertheless, the principal amount may change over the life of the financial asset (if there are principal repayments). Interest is the compensation received for the time value of money and the credit risk related to the principal amount owed over a specified period, alongside other risks and administrative costs, and a profit margin.

For the assessment, the Bank conducts a test evaluating whether the contractual flows meet the criteria for a core lending arrangement. The Bank uses its professional assessment and considers relevant factors such as currency, interest rate (fixed or variable) and the period it sets.

The assessment of business models is not an instrument-by-instrument ranking approach but at a higher level of aggregation and considers all relevant evidence: model performance, risks affecting performance, and how managers are rewarded, among others.

According to the above, the objectives of the business models are:

- To hold assets to collect cash flows – through management that produces cash flows by collecting contractual payments throughout the instrument's life. Models with this goal allow for sales if they are infrequent (even if significant in value) or insignificant in value both individually and in aggregate (even if frequent), and even more so if they result from a substantial increment in risk or the risk management of credit concentration.
- To maintain financial assets for collection and sale. Per this objective, the entity's key management personnel have decided that the supply of contractual cash flows and the sale of financial assets are essential to achieve the business model's goal. Therefore, there is a higher frequency and value of sales for this purpose.
- Other models - financial assets are measured at fair value through profit or loss if they are not held within a business model whose objective is to hold the assets to collect contractual cash flows or if their objective is achieved by obtaining contractual cash flows and selling financial assets. Assets are managed on a sales basis, and decisions are made on a fair value basis.

In accordance with the above, the Bank will classify its financial assets based on whether they are subsequently measured at amortized cost, at fair value through other comprehensive income, or at fair value through profit or loss.

Additionally, an irrevocable election may be made at the time of initial recognition of investments in equity instruments to present subsequent changes in fair value in other comprehensive income.

Classification of financial liabilities

An entity shall classify all financial liabilities as subsequently measured at amortized cost, except for derivative liabilities which shall be measured at fair value through profit or loss.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued*Reclassifications*

Reclassifying financial assets only occurs only when the business model for managing financial assets has changed. These changes are determined by top management due to external or internal changes. Financial liabilities are not reclassified.

iv. Measurement of financial assets/liabilities*Initial measurement*

Financial assets and liabilities are initially measured at fair value (transaction price), plus or minus transaction costs in the case of a financial asset or financial liability that is not carried at fair value through profit or loss.

Subsequent measurement of financial assets

A financial asset shall subsequently be measured according to the following:

1. Amortized cost

A financial asset is measured at amortized cost if the financial asset is held within a business model whose objective is to hold financial assets to earn cash flows, and the contractual terms of the financial asset give rise, at specified dates, to cash flows that are solely payments of principal and interest on the outstanding principal amount.

Interest income shall be calculated using the effective interest method. This method applies to financial assets and liabilities measured at amortized cost (interest income and interest expense). The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial asset or financial liability to the gross carrying amount of the financial asset or the amortized cost of a financial liability.

2. Fair value through other comprehensive income

A financial asset is measured at fair value through other comprehensive income if the financial asset is held within a business model in which the objective are to obtain the contractual cash flows, to sell financial assets, and if the contractual terms of the financial asset give rise, at specified dates, to receive cash flows that are solely payments of principal and interest on the outstanding principal amount.

3. Fair value through profit or loss

A financial asset is measured at fair value through profit or loss unless measured at amortized cost or fair value through other comprehensive income.

4. Irrevocable election to measure at fair value with changes in other comprehensive income

Upon the initial recognition of Investments in equity instruments, a determination may be held to present subsequent changes in fair value in other comprehensive income that would otherwise be measured at fair value through profit or loss when not held for trading, except for dividend income, which is recognized in profit or loss for the period. Gains or losses arising from the derecognition of these equity instruments are not transferred to profit or loss.

Subsequent measurement of financial liabilities

Financial liabilities are subsequently measured at amortized cost, except for derivatives measured at fair value through profit or loss.

v. Derecognition of financial assets/liabilities

A financial asset shall be derecognized when and only when:

- (i) The contractual rights to the cash flow from the financial asset expire, or
- (ii) The contractual rights to receive the cash flows of a financial asset are transferred, or it retains the contractual rights to receive the cash flows of a financial asset but assumes a contractual obligation to pay them to one or more recipients. In this sense, if the risks and rewards of ownership of the financial asset are substantially transferred, the financial asset is derecognized.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

In the case of unconditional sales, sales under repurchase agreements at fair value at the date of repurchase, sales of financial assets with a purchased call option or a written put option that is deeply out of the money, uses of assets where the transferor does not retain subordinated financing nor grants any credit enhancement to the new owners, and other similar cases, the transferred financial asset is recognized from the Interim Consolidated Statements of Financial Position with simultaneous recognition of any rights or obligations retained or created as a result of the transfer.

In the case of sales of financial assets: (i) under fixed-price repurchase agreements or using the sale price plus interest, (ii) of securities lending agreements in which the borrower must return the same or (iii) similar assets and in other akin cases, the transferred financial asset is not recognized from the Interim Consolidated Statements of Financial Position and continues to be measured using the same criteria as before the transfer.

A financial liability is derecognized when and only when it is extinguished – that is, when the obligation specified in the contract is paid for, cancelled or expired. In the case of loans, the FMC requirements for recognition applies. See letter o), VIII.

vi. Offsetting a financial asset with a financial liability

A financial asset and a financial liability shall be offset and presented by their net amount in the Interim Consolidated Statements of Financial Position when, and only when, there is a legally enforceable right to set off the recognized amounts and an intention to settle the net amount or to realize the asset and settle the liability, simultaneously. As of June 30, 2026, and 2025, and December 31, 2025, the Bank has no financial asset/liability that offset.

9. Financial derivatives and hedge accounting

Derivatives are classified as either trading instruments or hedging instruments. The Bank uses financial derivatives for the following purposes:

- i. To provide such instruments to customers who request them to manage their market and credit risks.
- ii. To use them for the risk management of the proprietary position of the Bank's entities and their assets and liabilities ('hedging derivatives').
- iii. To benefit from changes in the value of these derivatives (trading derivatives).

Trading derivatives are measured at fair value through profit or loss and are presented as assets/liabilities according to their positive or negative fair value. Derivatives that do not qualify as hedging instruments are accounted for as trading instruments.

Hedge accounting aims to reflect in the financial statements the effect of an entity's risk management activities that use financial instruments to manage exposures arising from specific risks that could affect profit or loss for the period or other comprehensive income.

During the 2025 financial year, the Bank began applying the requirements established in IFRS 9- *Financial Instruments* for hedge accounting relationships. The main impacts of this change on hedge accounting are primarily related to:

- the incorporation of credit risk dominance analysis and the economic relationship in effectiveness assessment
- the updating of formal hedge documentation
- the recognition of a hypothetical derivative representing the portion of the mark-to-market (MTM) corresponding to the risk being hedged in the hedged item for micro cash flow hedges. The hypothetical derivative replaces the previously recognized fictitious derivative

For a hedging relationship to meet the requirements established in IFRS 9- *Financial Instruments*, it must comply with the following conditions:

- Eligible hedging instruments: All derivative financial instruments or non-derivative financial instruments measured at fair value through profit or loss, or combinations thereof. In the case of foreign exchange risk hedges, any type of non-derivative financial instrument may also be designated, regardless of its measurement criteria.
- Eligible hedged items: Recognized assets or liabilities, firm commitments, highly probable forecast transactions, and net investments in foreign operations.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

- Documentation: At the inception of the hedge, a formal designation and documentation of the hedging relationship must be prepared, including the entity's risk management objective and strategy, identification of the hedging instrument and hedged item, the nature of the hedged risk, the methodology for measuring effectiveness (including analysis of sources of ineffectiveness), and the hedge ratio.

The main sources of ineffectiveness based on the hedged risk are:

- Interest rate risk: mismatches in time horizons, principal amounts, repricing and payment dates, time value of options, and modifications to the hedged item or hedging instrument.
- Foreign exchange risk: in addition to the above, differences between the interest rates of the two currencies representing the net cost or benefit of exchanging cash flows between currencies with different interest rates.
- Effectiveness: The hedging relationship must be effective, which requires the existence of an economic relationship between the hedged item and the hedging instrument, that credit risk does not dominate value changes, and that the hedge ratio is consistent with that used in the entity's risk management.

The implementation of IFRS 9- *Financial Instruments* for hedging relationships designated prior to December 31, 2024, did not have a material impact on the Interim Consolidated Statement of Financial Position or the Interim Consolidated Statement of Income. As of December 31, 2025, the impact on profit or loss amounted to Ch\$2,401 million.

The Bank assesses these effectiveness requirements through:

- Demonstrating the economic relationship between the hedged item and the hedging instrument through a qualitative test, and, if not met, through quantitative tests comparing the market value of the hedged items (for the hedged risk) and the hedging instruments. Prospectively, a quantitative analysis of changes in market values is also performed.
- Calculating the hedge ratio based on the quantity of hedged items actually hedged and the quantity of hedging instruments actually used.
- Assessing credit risk dominance through analysis of the credit exposure of both hedged items and hedging instruments.

Hedge accounting derivatives are classified and recognized based on the type of risk they hedge, in accordance with the following criteria:

Fair value hedges: These hedge exposures to changes in the fair value of a hedged item attributable to a specific risk.

Gains or losses arising from both the hedging instruments and the hedged items (for the hedged risk) are recognized directly in the Interim Consolidated Statements of Income.

When a fair value hedge is discontinued, previously recognized adjustments to the hedged item are amortized to profit or loss using the recalculated effective interest rate from the date hedge accounting ceases and must be fully amortized by maturity.

In accordance with paragraph 6.1.3 of IFRS 9- *Financial Instruments*, the Bank continues to account for fair value macro-hedges under IAS 39. Accordingly, gains or losses on hedging instruments are recognized directly in the Interim Consolidated Statements of Income, while gains or losses arising from changes in the fair value of the hedged amount (attributable to the hedged risk) are recognized in profit or loss with a corresponding entry in "Changes in the fair value of hedged items" of a portfolio hedge of interest rate risk (asset or liability), as appropriate.

Cash flow hedges: These hedge exposures to variability in cash flows attributable to a specific risk associated with the hedged item.

The effective portion of changes in the value of the hedging instrument is temporarily recognized in equity, under "Other comprehensive income – Items that may be reclassified to profit or loss – Hedging derivatives. Cash flow hedges (effective portion)" until the hedged item affects profit or loss.

At that point, it is recognized in the Interim Consolidated Statements of Income in the same period as the hedged item, unless it is included in the cost of a non-financial asset or liability, or when forecast transactions result in the recognition of non-financial assets or liabilities.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

When cash flow hedges are discontinued, the cumulative gain or loss recognized in equity (while the hedge was effective) continues to be recognized there until the hedged transaction occurs, at which point it is recognized in profit or loss, unless the transaction is no longer expected to occur, in which case it is recognized immediately in profit or loss.

The Bank discontinues hedge accounting when the hedging instrument expires, is sold, or when the hedging relationship becomes ineffective because it is no longer aligned with the risk management objective. In such cases, the derivative is thereafter accounted for as a trading derivative.

If a hedging relationship ceases to meet effectiveness requirements but the risk management objective remains unchanged, the Bank will assess whether to rebalance or adjust the hedge ratio to meet effectiveness requirements again without discontinuing the hedging relationship.

A hedging instrument is generally designated in its entirety, as the factors contributing to its fair value are interdependent. However, IFRS 9 allows certain components to be excluded from designation:

1. Separating the intrinsic value and time value of an option and designating only the intrinsic value as the hedging instrument (mandatory if intrinsic value is designated);
2. Separating the forward element and spot element of a forward contract and designating only the spot element as the hedging instrument (determined per hedging relationship); and
3. Separating the foreign currency basis spread of a currency derivative and excluding it from designation (determined per hedging relationship).

Separating these components improves hedge effectiveness and allows alternative accounting treatment for excluded components, whereby changes in value are recognized in "Accumulated other comprehensive income – Non-designated items" and subsequently recognized in profit or loss depending on the nature of the hedged item, either over time or when the hedged transaction occurs.

Additionally, if the entity manages the credit risk of all or part of a financial instrument using credit derivatives, it may designate a credit exposure at fair value through profit or loss, provided that the derivative matches the name and seniority of the instrument being hedged. This designation may be made at initial recognition or subsequently, with proper documentation. From designation onward, all fair value changes (not only those related to credit risk) are recognized in the Interim Consolidated Statements of Income.

Embedded derivatives in hybrid financial instruments

"Embedded derivatives" are a component of a hybrid contract that simultaneously includes a non-derivative host contract together with a financial derivative that is not separately transferable and has the effect that some of the cash flows of the hybrid contract vary in the same manner as the embedded derivative would if considered on a stand-alone basis. As of June 30, 2026, and 2025, and December 31, 2025, Banco Santander-Chile maintains embedded derivatives in its portfolio within contracts known as Dual Currency, which are accounted for as options within the trading derivatives portfolio.

10. Fair value of financial assets and liabilities

No transaction costs are deducted when financial assets and liabilities are measured at fair value. Assets and liabilities subsequently measured at amortized cost are not required to be measured at fair value.

'Fair value' is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal market at the measurement date under current market conditions (i.e., an exit price) regardless of whether that price is directly observable or estimated using another valuation technique. Fair value measurement is for a specific asset or liability. Therefore, in measuring fair value, the Bank considers the characteristics of the asset or liability in the same way that market participants would consider in pricing the asset or liability at the measurement date. In addition, the fair value measurement assumes that the transaction of selling the asset or transferring the liability takes place either: (a) in the principal market for the asset or liability or (b) in the absence of a principal market, the most advantageous market for the asset or liability.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

When there is no market price for a given financial instrument, its fair value is estimated based on the price established in recent transactions involving similar instruments or, in the absence thereof, based on valuation models sufficiently contrasted by the international financial community, considering the specific peculiarities of the instrument to be valued and especially, the different types of risk related to the instrument.

When valuation techniques are used, they maximize the use of the relevant observable input data and minimize that of unobservable input data. For example, when an asset or a liability measured at fair value has a bid price and an asking price, the price within the bid-ask spread that is most representative of fair value in the circumstances shall be used to measure fair value regardless of where the input is categorized within the fair value hierarchy.

Although average prices are allowed as a practical resource to determine the fair value of an asset or a liability, the Bank makes an adjustment (FVA or fair value adjustment) when there is a gap between the purchase and sale price (close-out cost).

All derivatives are recorded in the Interim Consolidated Statements of Financial Position at fair value from the trade date. If their fair value is positive, they shall be recorded as an asset; if their fair value is negative, they shall be recorded as a liability. In the absence of evidence to the contrary, the trade date's fair value is deemed the transaction price. Changes in the fair value of derivatives from the trade date are recognized with a balancing entry in the Interim Consolidated Statements of Income under "Profit/(loss) on financial assets/liabilities held for trading at fair value through profit or loss".

Specifically, the fair value of financial derivatives included in trading portfolios is based on their daily market quotation and, if for exceptional reasons a market quotation cannot be determined on a given date, valuation techniques similar to those used for derivatives contracted in over-the-counter (OTC) markets are applied. The fair value of these derivatives is determined as the sum of the future cash flows arising from the instrument, discounted to the valuation date ("present value" or "theoretical close"), using valuation methodologies recognized in the financial markets, including "net present value" and option pricing models, among other methods. In addition, the fair value of derivatives includes valuation adjustments reflecting the credit risk of the transaction, whether the Bank's own credit risk (DVA) or that of the counterparty (CVA), with the objective that the fair value of each instrument incorporates both counterparty credit risk and the Bank's own credit risk. Counterparty Credit Risk (CVA) is a valuation adjustment applied to derivatives contracted in over-the-counter markets as a result of exposure to counterparty credit risk. Liquidity Valuation Adjustment (LVA) has also become a key component in the management of valuation adjustments, reflecting the funding cost of uncollateralized derivatives. LVA represents the additional cost incurred when a bank enters into uncollateralized derivative transactions that require funding, incorporating the liquidity premium associated with obtaining funding for these positions. LVA hedging aims to mitigate the financial impact of funding costs associated with uncollateralized exposures.

The CVA is calculated considering the potential exposure to each counterparty in future periods. The Debit Valuation Adjustment (DVA) is a valuation adjustment similar to CVA, but generated by the Bank's credit risk assumed by our counterparties. In the case of derivative instruments contracted with Central Clearing Houses, where the variation margin is contractually defined as a firm and irrevocable payment, this payment is considered part of the derivative's fair value. The Liquidity Valuation Adjustment (LVA) has become a key component in the management of valuation adjustments, reflecting the funding cost of uncollateralized derivatives. LVA represents the additional cost incurred when a bank enters into uncollateralized derivative transactions that require funding, incorporating the liquidity premium associated with obtaining funding for these positions. LVA hedging aims to mitigate the financial impact of funding costs associated with uncollateralized exposures.

For loans and advances covered by fair value hedging transactions, changes in their fair value related to the risk or risks covered in these hedging transactions are recorded.

Equity instruments and contracts related to these instruments must be measured at fair value. Nevertheless, in certain circumstances, the Bank may use cost as an appropriate fair value estimate. This may be necessary, for example, if the recently available information is insufficient to measure the fair value or if a wide range of possible fair value measures exists, and the cost represents the best fair value estimate within that range. Furthermore, the Bank may irrevocably elect to present subsequent changes in the instrument's fair value in other comprehensive income.

As of June 30, 2026, and 2025, and December 31, 2025, no significant investments in listed financial instruments had ceased to be recorded at their quoted market value due to their market being unable to be considered active.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

The amounts at which financial assets/liabilities are recorded represent, in all material respects, the Bank's maximum exposure to credit risk at each reporting date. The Bank also has collateral and other credit enhancements to mitigate its exposure to credit risk, consisting mainly of mortgages, cash, equity and personal guarantees, leased and rented assets, assets purchased under repurchase agreements, securities lending and credit derivatives.

Valuation techniques

According to IFRS 13 'Fair Value Measurement', a fair value hierarchy is established based on three levels: Level 1, Level 2 and Level 3, in which the highest priority is given to quoted prices (unadjusted) in active markets for identical assets and liabilities and the lowest priority to unobservable inputs.

Financial instruments at fair value and determined by published prices in active markets (Level 1) comprise government bonds, corporate bonds, exchange-traded derivatives, securitized assets, equities, short positions and issued bonds.

In cases where quotations cannot be observed, management best estimates what the market would price using its own internal models. In most cases, these internal models use data based on observable market parameters as significant inputs (level 2) and sometimes use significant unobservable inputs in market data (level 3). Various techniques are used to estimate it, including extrapolating observable market data. The most reliable evidence of the fair value of a financial instrument on initial recognition is the transaction price unless the value of that instrument can be derived from other market transactions by the same or a similar instrument or valued using a valuation technique in which the inputs used include only observable market data, mainly interest rates.

The main techniques used as of June 30, 2026, and 2025, and December 31, 2025 by the Bank's internal models to determine the fair value of financial instruments are described below:

- i. The present value method is used to value financial instruments that allow static hedging (mainly forwards and swaps). Expected future cash flows are discounted using the interest rate curves of the corresponding currencies. As a rule, interest rate curves are data that can be observed on the markets.
- ii. In the valuation of financial instruments that require dynamic hedging (mainly structured options and other structured instruments), the "Black-Scholes" model is normally used. Where appropriate, observable market inputs are used to obtain factors such as the diluted bid-offer, exchange rates, volatility, correlation between indices and market liquidity.
- iii. In the valuation of certain financial instruments subject to interest rate risk, such as interest rate futures, caps and floors, the present value method (futures) and the "Black-Scholes" model ("plain vanilla" options) are used. The main inputs used in these models are mainly observable market data, including the corresponding interest rate curves, volatilities, correlations and exchange rates.

The fair value of the financial instruments calculated by the aforementioned internal models considers contractual terms and observable market data, including interest rates, credit risk, exchange rates, the quoted market price of shares and market rates of raw materials, volatility, prepayments and liquidity. The Bank's management verifies that the valuation models do not incorporate significant subjectivity. Therefore, if necessary, these methodologies can be adjusted and calibrated through internal calculations of fair value and subsequent comparison with the corresponding actively traded prices.

The Bank has developed a formal process for the systematic valuation and management of financial instruments, implemented in all units included in the scope of consolidation. The governance structure of this process distributes responsibilities between two separate divisions: Treasury (responsible for the development, marketing and daily management of financial products and market data) and Market Risks (responsible for the periodic validation of valuation models and market data, the process of calculating risk metrics, standards for approving new transactions, market risk management and the implementation of valuation adjustment standards).

Approving a new product involves several steps (application, development, validation, integration into corporate systems and quality review) before production. This process ensures the rating systems are properly reviewed and stable before use.

Details of the most significant derivative products and families, together with their respective valuation techniques and inputs, by type of asset, are set out in Note 44 'Fair value of financial assets and liabilities' in these Interim Consolidated Financial Statements.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued**11. Fixed assets**

This category includes the buildings, land, furniture, vehicles, computer hardware and other fixed assets owned by the consolidated entities. Assets are classified according to their use as follows:

a. Fixed assets for own use

Fixed assets for own use (which includes, among others, tangible assets received by consolidated entities in settlement, in whole or in part, of financial assets representing receivables from third parties, and which are expected to be used on a continuing basis in the entity's own operations) are presented at acquisition cost, less the corresponding accumulated depreciation and, where applicable, impairment losses resulting from comparing the net carrying amount of each item with its corresponding recoverable amount.

Depreciation is calculated using the straight-line method over the acquisition cost of assets minus their residual value, assuming that the land on which buildings and other structures stand has an indefinite life and is not subject to depreciation. The Bank applies the following useful lives for the tangible assets that comprise its assets:

ITEM	Useful Life (Months)
Land	-
Paintings and works of art	-
Carpets and curtains	36
Computers and Hardware	36
Vehicles	36
Machines and general equipment	60
Office furniture	60
Telephone and communication systems	60
Security systems	60
Rights over telephone lines	64
Air conditioning systems	84
ATMs and teleconsultations	120
Other installations	120
Buildings	1,200

At each reporting period, the consolidated entities assess whether there is any indicator that the carrying amount of any tangible asset exceeds its recoverable amount. If this is the case, the asset's carrying amount is reduced to its recoverable amount. Future depreciation charges are adjusted under the revised carrying amount and to the new remaining useful life, if an adjustment of the latter is necessary.

Likewise, the estimated useful lives of the items of property, plant and equipment held for own use are reviewed at the end of each reporting period to detect significant changes. If changes are detected, the useful lives of the assets are adjusted by correcting the depreciation charge to be recorded in the Interim Consolidated Statements of Income in future years based on the new useful lives.

Maintenance expenses relating to tangible assets held for own use are recorded as an expense in the period in which they are incurred.

b. Assets leased out under operating leases

The criteria used to record the acquisition cost of assets leased out under operating leases, calculate their depreciation and their respective estimated useful lives, and record their impairment loss are the same criteria as those for fixed assets held for own use.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued**12. Leases**

At the contract's creation, the Bank assesses whether it contains a lease or not. A contract contains a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for compensation. To assess whether a contract conveys the right to control the use of an identified asset, the Bank assesses whether:

- The contract involves using an identified asset. This may be specified explicitly or implicitly and should be physically identified. The asset is not identified if the supplier has a significant substitution right.
- The Bank has the right to obtain all the economic benefits from using the asset throughout the contract's duration.
- The Bank has the right to direct the use of the asset – this is the decision-making purpose for which the asset is used.

i. As a lessee

The Bank recognizes a right-of-use asset and a lease liability at the starting date of the lease according to the IFRS 16 'Leases'. The Bank's main contracts are for offices and branches which are necessary to undertake its activities.

In the beginning, the right-of-use asset is equal to the lease liability. It is calculated as the present value of the lease payments, which are discounted using the Bank's incremental interest rate at the starting date and considering each contract's duration. The average incremental interest rate is 2.12%. Subsequently, the asset is straight-line depreciated according to the contract's duration, and the financial liability is amortized in terms of the monthly payments. The financial interest is charged to net interest income, and the depreciation is charged to the depreciation expense of each financial year.

The lease's term encompasses non-cancellable periods stipulated within each contract. In the case of a lease contract with indefinite duration, the Bank has determined to assign a span equal to the longest of the non-cancellable period of its lease contracts. Contracts with a non-cancellable period of 12 months or less are treated as short-term leases. Therefore, the related payments are recorded as a straight-line expense. Any change in the lease term or rent is treated as a new measurement of the lease.

In the initial measurement, the Bank measures the right-of-use of the asset at cost. The rent of the lease contracts is agreed in UF and payable in Chilean pesos. According to Circular No 3,649 of the FMC, the monthly UF variation that affects all contracts established in such monetary units should be treated as a new measurement. Therefore, readjustments should be recognized as an amendment to the obligation, and in parallel, the amount of the related asset should be adjusted.

The Bank has not entered into lease agreements with guarantee clauses for residual value or variable lease payments.

ii. As a lessor

When the Bank acts as a lessor, it first determines if it corresponds to a financial or operating lease. To do this, the Bank evaluates whether it has substantially transferred all the risks and benefits of the asset. If so, this corresponds to a financial lease. Otherwise, it is an operating lease.

The Bank recognizes lease rentals received on a straight-line income basis over the lease term.

iii. Third-party financing

The sum of present values of the lease payments receivable from the lessee is recognized in the line item: 'Loans and receivables from customers' in the Interim Consolidated Statements of Financial Position. This includes the price of the lessee's right-to-call option at the end of the lease term when there is reasonably certain that the lessee will exercise said right. The financial income and expense derived from these contracts are recorded in the Interim Consolidated Statements of Income under 'Interest income' and 'Interest expense', respectively, to achieve a constant return rate over the lease term.

13. Factoring transactions

Factored receivables are valued at the amount disbursed by the Bank in exchange for invoices or other commercial instruments representing the credit the transferor assigns to the Bank. The price difference between the amounts disbursed and the actual face value of the loans is recorded as interest income in the Interim Consolidated Statements of Income using the effective interest method over the financing period. When the assignment of these instruments involves no liability on the part of the assignee, the Bank assumes the risks of insolvency of the parties responsible for payment.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued**14. Intangible assets**

Intangible assets are non-monetary assets (identifiable separately from other assets) without physical substance arising from legal or contractual rights. The Bank recognizes an intangible asset, whether purchased or self-created (at cost) when the asset's cost can be measured reliably. Additionally, the future economic benefits attributable to the asset are expected to flow into the Bank.

To calculate intangible assets, they are recorded initially at their acquisition or production cost, from which the accumulated amortization and accumulated impairment loss are subtracted.

Internally developed computer software is recorded as an intangible asset if, among other requirements (primarily the Bank's ability to use or sell it), it can be identified and its ability to generate future economic benefits can be demonstrated.

Intangible assets are amortized linearly based on their estimated useful life, defined by default at 36 months. They can be modified if the extent to which the Bank will benefit from its use for a different period than the mentioned above is demonstrated.

Expenditure on research activities is recorded as an expense incurred in the year and cannot be subsequently capitalized.

15. Non-current assets held for sale***Non-current assets held for sale and discontinued operations***

Per the IFRS 5, 'Non-current assets held for sale and discontinued operations', a non-current asset is classified as held for sale if their carrying amount will be recovered mainly through a sale transaction rather than through continued use.

To apply the above classification, the asset must meet the following requirements:

- It must be available in its current conditions for immediate sale, and a sale must be highly probable.
- For it to be highly probable, the appropriate management level must be engaged in a plan to sell the asset (or group of assets for its disposal). Also, a program to find a buyer and completing said purchase must have been actively initiated.
- Furthermore, the sale should be expected to qualify for recognition as a completed sale within one year of the classification date.

Assets classified in this way will be measured at the lower of their carrying amount or their fair value less costs to sell.

As of June 30, 2026, the Bank has fixed assets that meet the definition of non-current assets held for sale, which amount to approximately Ch\$28,865 million.

Assets received in payment or awarded through judicial foreclosure proceedings.

The goods received or awarded in lieu of payment of loans and accounts receivable from clients are recorded, in the case of assets awarded in lieu of payment, at the price agreed between the parties or, conversely, in those cases where there is no agreement between them, by the amount for which the Bank acquired said assets in a judicial auction. In both cases, an independent assessment of the market value of the goods is determined based on the state in which they are acquired.

If the value of loans and receivables exceeds the fair value of the asset received or foreclosed as payment minus selling cost, the difference is recorded in the Interim Consolidated Statements of Income under 'Credit loss expenses'.

These assets are subsequently valued at the lower amount between the initially recorded figure and the net realizable value, which corresponds to their fair value (liquidation value determined through an independent appraisal) minus their respective costs of sale. The differences between the two are recognized in the Interim Consolidated Statements of Income under 'Other operating expenses'.

At the end of each year, the Bank reviews the selling cost of assets received or foreclosed in payment, which is then applied from that date onwards and into the following year. In December 2025, the average cost was estimated at 7.15% of the appraised value (7.11% as of December 31, 2025). In addition, a review of the appraisals by an independent is carried out every 18 months to adjust the fair value of the assets.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

In general, it is estimated that these assets will be disposed of within one year from the date they are acquired. In compliance with the provisions of Article 84 of the General Banking Law, those assets that are not sold within such period are written off in a single installment, and an extension is requested from the FMC.

Also included are assets recovered from finance lease transactions, as lessor, that are held for sale rather than being re-leased through new finance lease transactions.

16. Income and expense recognition

The most important criteria used by the Bank to recognize its revenues and expenses are summarized as follows:

a. Interest revenue, interest expense, and similar items

Interest income, interest expense and similar items are recognized on an accrual basis using the effective interest rate method.

Nevertheless, the Bank ceases to recognize income on an accrual basis when a loan or one of its installments is 90 days overdue. This means that interest, adjustments or commissions are not recognized in the Interim Consolidated Statements of Income unless effectively received.

These interest and readjustments are generally referred to as 'suspended' and are recorded in memorandum accounts, which do not form part of the Interim Consolidated Statements of Financial Position but are reported as part of the supplementary information therein (Note 30 and 31).

Interest incomes of previous 'transactions with suspended accrual' are only recognized again when the debtor is up to date with its obligations.

b. Commissions, fees and similar items

Fee and commission income and expenses are recognized in the Interim Consolidated Statements of Income using the criteria set out in IFRS 15, 'Revenue from contracts with customers'.

Under IFRS 15, 'Revenue from contracts with customers', the Bank recognizes revenue when it satisfies its performance obligations by transferring the service (an asset) to the customer. Under this definition, an asset is transferred when the customer obtains control over the asset. The Bank considers the contractual terms and its traditional business practices for determining the transfer price. The transfer price is the amount of compensation the entity expects to be entitled in order to transfer committed goods and services to the customer, excluding amounts collected on behalf of third parties.

The Bank consistently applies the recognition method for each performance obligation, whether it is satisfied over time or at a specific point in time. The main income arising from commissions, fees, and similar items are:

- Credit prepayment fees, which include fees related to customer prepayments of credit operations.
- Fees and commissions on loans with letters of credit, which comprise fees and commissions related to granting loans with letters of credit.
- Fees for lines of credit and overdraft fees, which refer to fees accrued during the year to grant credit lines and current account overdrafts.
- Fees for guarantees and letters of credit, which include fees accrued during the year to grant payment guarantees for real or contingent third-party obligations.
- Card service fees. These refer to fees earned and accrued for the year related to the usage of credit, debit and other cards.
- Account administration fees. These comprise fees incurred for maintenance of current, savings and other accounts.
- Fees and commissions for collections and payments, which include fees and commission income generated by the Bank's collections and payment services.
- Commissions for brokerage and administering securities, which refer to income from commissions generated on brokerage, issuances, administration, and custody of securities.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

- Remuneration for the administration of mutual funds, investment funds or others, which comprises commissions from fund management companies separated by type of client (natural or legal person).
- Insurance intermediation and consultancy fees, which include income generated through insurance sales, separated by the type of insurance brokered.
- Fees for financial leasing transaction services, which refer to those financial leasing services in which the Bank acts as a lessor.
- Securitization fees, which include fees for securitization services.
- Fees for financial advisory services, which comprise those involved in advisory services concerning the issuance and placement of financial instruments, restructuring and funding financial liabilities, sale and purchase of companies, and others.
- Other commissions earned, which include income generated by currency exchanges, issuing cashier checks and guarantee slips, trust commissions, foreign trade operations, student loan administration, and other services.

Commission expenses comprise:

- Card transaction fees, which involve commissions generated by credit cards, debit cards and the provision of funds related to the income generated from card service fees.
- License fees of card brands. These are fees paid to the main card brands: credit, debit and provision of funds.
- Other fees for services linked to the credit card system and cards with the provision of funds.
- Expenses for loyalty and merit program obligations for card clients. They refer to expenses related to customer benefit programs related to the use of cards.
- Fees for securities transactions. They comprise fees for deposit, safekeeping and brokerage of securities, investments in mutual funds, stock exchanges, central counterparty and market infrastructure services.
- Other fees for services received. They include securities services, foreign trade, correspondent banking, ATMs and wire transfer fees.
- Fees for clearing high-value payments, which include fees to ComBanc, CCLV, etc.

The relationship between the Segment Note and the disaggregated income is presented in Note 32 Commission Income and Expenses.

The Bank maintains loyalty plans associated with its credit cards, which under IFRS 15 "Revenue from ordinary activities from contracts with customers" have the necessary provisions to meet the delivery of the committed future performance obligations, or said obligations are settled immediately when they are generated.

c. Non-financial income and expenses

These are recognized under the criteria established in IFRS 15, 'Revenue from contracts with customers', identifying the performance obligation and when they are satisfied (accrued).

d. Commissions in the origination of loans

Financial fees and commissions arising from the origination of loans, mainly origination or research and information gathering fees are accrued and recognized in the Interim Consolidated Statements of Income over the life of the loan.

17. Provisions for credit risk on loans and receivables and contingent liabilities

The Bank continuously evaluates the entire portfolio of loans and contingent loans, as established by the FMC, to promptly create sufficient provisions to cover the expected loss linked with the debtors' characteristics and their loans based on payment and subsequent recovery.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

The Bank uses the following models established by the FMC and approved by the Board of Directors to assess its loan and contingent loan portfolio:

- Individual assessment of debtors – This applies to debtors recognized as individually significant, that is, with substantial levels of debt, and to those who, even if not significant, are not able to be classified in a group of financial assets with similar credit risk characteristics, and which, due to their size, complexity or level of exposure, require detailed analysis
- Group assessment of debtors - Group assessments are relevant for residential mortgage and consumer credit exposures, in addition to commercial student credit exposures and exposures to debtors that simultaneously meet the following conditions:
 - i. The Bank has an aggregate exposure to the same counterparty of less than UF 20,000. The aggregate exposure is considered as the gross amount before provisions or other mitigation factors. It also includes residential mortgages in the calculation. Concerning off-balance sheet items (contingent loans), the gross amount is calculated by applying the credit translation factors defined in Chapter B-3 of the CASB.
 - ii. Each aggregate exposure to a single counterparty does not exceed 0.2% of the total portfolio of loans assessed on a group basis.

Group assessments are suitable for dealing with many transactions, each of a low amount, involving individuals or small companies. The Bank groups debtors with similar credit risk characteristics by associating each group with a certain probability of non-performing and a recovery rate based on a substantiated historical analysis. To this end, the Bank implemented the standard model for mortgage and commercial loans and its internal model for consumer loans.

A. Provisions for individual assessments

The individual assessment of a commercial loan debtors is necessary, as established by the FMC, in the case of companies that require detailed knowledge and analysis due to their size, complexity, or level of exposure to the entity.

The analysis of debtors focuses firstly on their credit quality. Then, it classifies them in the risk category corresponding to the debtor and their respective credit operations and contingent loans after assigning them to one of the three portfolio statuses: Normal, Substandard or Impaired. The risk factors used in this analysis are the industry or sector, business situation, partners and management, the company's financial situation and ability to pay, and payment behavior.

The portfolio categories and their definitions are as follows:

1. Normal Portfolio includes debtors in which their payment capacity will permit them to pay their obligations and commitments. Evaluations of the current economic and financial environment do not indicate that this will change. The classifications assigned to this portfolio are categories from A1 to A6.
2. Substandard Portfolio includes debtors with financial difficulties or significant deterioration of their payment ability. There is reasonable doubt concerning the future reimbursement of the capital and interest within the contractual terms, with limited ability to meet short-term financial obligations. The classifications assigned to this portfolio are categories B1 to B4.
3. Impaired Portfolio includes debtors and their credits for which repayment is considered remote, as they show a deteriorated or no payment capacity. This portfolio includes debtors who have stopped paying their debts or with obvious indications that they will stop paying, as well as those that require a forced restructuring of debts, reducing the obligation or postponing the term of the principal or interest, and any debtor who is in arrears equal to or greater than 90 days in the payment of interest or capital. The classifications assigned to this portfolio are categories C1 to C6.

Normal and Substandard Portfolio

As part of the individual assessment of debtors, the Bank classifies them into the following categories, assigning them a probability of default and severity, which result in the expected loss percentages:

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

Portfolio	Debtor's Category	Probability of Non-performance (%)	Severity (%)	Expected Loss (%)
Normal Portfolio	A1	0.04	90.00	0.0360
	A2	0.10	82.50	0.0825
	A3	0.25	87.50	0.2188
	A4	2.00	87.50	1.7500
	A5	4.75	90.00	4.2750
	A6	10.00	90.00	9.0000
Substandard Portfolio	B1	15.00	92.50	13.8750
	B2	22.00	92.50	20.3500
	B3	33.00	97.50	32.1750
	B4	45.00	97.50	43.8750

The first step to determine the amount of provisions is to assess the affected exposure, which comprises the book value of loans plus contingent loans, minus the amounts that are feasible to recover through the execution of financial collateral or other collateral covering the operations. To this exposure, the respective loss percentages are applied. In the case of collateral, the Bank must demonstrate that the value assigned to the deduction reasonably reflects the value that can be realized from the disposal of the assets or equity instruments. If the debtor's credit risk is substituted for the guarantor's credit quality, this methodology will only apply if the guarantor or surety is an entity qualified in a category similar to investment grade by a local or international rating agency recognized by the FMC.

Under no circumstances may an endorsed valuable be deducted from the exposure amount, a procedure applicable only in the case of financial guarantees or real collateral.

Notwithstanding the above, the Bank must maintain a minimum provision of 0.5% over loans and contingent loans in the normal portfolio.

Impaired Portfolio

The impaired portfolio includes all loans and the entire value of contingent loans of the debtors overdue by 90 days or more on a single payment of interest or principal of any loan at the end of the month. It also includes debtors who have been granted a loan to refinance loans overdue by 60 days or more and debtors who have undergone forced restructuring or partial debt forgiveness.

The impaired portfolio excludes: a) residential mortgage loans, with payments overdue less than 90 days; and b) loans to finance higher education granted according to Law No 20,027, that do not fulfil the non-performing conditions outlined in Circular No 3,454 of December 10, 2008.

The provision for an impaired portfolio is calculated by determining the expected loss rate for the exposure, deducting the value of recoverable collateral and deducting the present value of recoveries made through collection services after the related expenses.

Once the expected loss range is determined, the related allowance rate is applied over the exposure amount, including loans and contingent loans related to the debtor.

The allowance rates applied over the calculated exposure are as follows:

Classification	Estimated range of loss	Allowance
C1	Up to 3%	2%
C2	Between 3% and 20%	10%
C3	Between 20% and 30%	25%
C4	Between 30% and 50%	40%
C5	Between 50% and 80%	65%
C6	More than 80%	90%

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

All the debtor's loans are maintained in the Impaired Portfolio until its payment ability is normalized, notwithstanding the charge-off of each loan that meets Title II of Chapter B-2 of the CASB. Once the circumstances that led to classification in the Impaired Portfolio have been overcome, the debtor can be removed from this portfolio once all the following conditions are met:

- i. The debtor has no obligations overdue with the Bank for 30 consecutive days or more.
- ii. The debtor has not been granted loans to refinance its obligations.
- iii. At least one of the payments includes the amortization of capital.
- iv. Two payments must already be made if the debtor has made partial loan payments in the last six months.
- v. If the debtor must make monthly payments, four consecutive installments must have been paid.
- vi. The debtor does not appear to have bad debts in the information provided by the FMC, except for insignificant amounts.

B. Provisions for group assessments

Group assessments are relevant for residential mortgage and consumer credit exposures, in addition to commercial student loan exposures and debtor exposures that simultaneously meet the following conditions:

- i. The Bank has an aggregate exposure (the exposure on the same Business Group at a consolidated level) to the same counterparty of less than UF 20,000. The aggregate exposure is considered gross of provisions or other mitigating factors and includes residential mortgage loans for its calculation. Concerning off-balance sheet items, the gross amount is calculated by applying the credit translation factors defined in Chapter B-3 of the CASB.
- ii. Each aggregate exposure to a single counterparty does not exceed 0.2% of the total portfolio evaluated under group assessment.

To determine provisions, group assessments require the creation of groups of loans with homogeneous qualities in terms of the type of debtors and contracted loan terms in order to establish, using technically sound estimates and prudential criteria, the payment behavior of the group and the recoveries of its non-performing loans. This is done using a model based on the characteristics of the debtors, payment history, outstanding loans and delinquency, among other relevant factors.

The Bank uses methodologies to determine credit risk based on internal and/or standard models to estimate provisions for the group-assessed portfolio. These include commercial loans for debtors who are not individually assessed, residential mortgage loans and consumer loans (including installment loans, credit cards and overdraft facilities). This methodology helps to independently identify the portfolio's performance one year ahead and determines the provision necessary to cover the losses arising in the period of one year from the balance sheet date.

Clients are segmented according to their internal and external characteristics into groups or profiles to differentiate the risk of each portfolio in a more appropriate and orderly manner (client-portfolio model). This is known as the profile assignment method.

The profile assignment method is based on a statistical construction method, constituting a relationship through a logistic regression between variables such as non-performance, external credit behavior, sociodemographic variables, and a response variable that determines a customer's risk, which in this case is non-performance equal to or greater than 90 days. Hence, common profiles are established and assigned a Probability of Non-Performance (PNP), also known as a Probability of Default (PD), and a recovery rate based on a substantiated historical analysis known as Loss Given Default (LGD).

Therefore, once the client has been assigned a profile and a PNP and a LGD has been set for their type of loan, the exposure at default (EXP) is calculated. This exposure includes the book value of the loans and receivables from the customer, plus contingent loans, minus any amount that can be recovered by activating collateral (for loans other than consumer loans).

Notwithstanding the above, in establishing provisions related to mortgage and commercial loans, the Bank must recognize minimum provisions according to standard methods established by the FMC for those types of loans. While this is considered a conservative minimum base, it does not relieve the Bank of its responsibility to have its own internal methodologies for determining adequate provisions to cover the portfolio's credit risk. Provisions must be made considering the higher value obtained between the respective standardized method and the internal method.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued**Standard method of provisions for group assessments****1. Residential mortgage portfolio**

Under the CASB, the Bank applies the standard provisioning method for residential mortgages. Under this method, the expected loss factor applicable to the number of residential mortgage loans will depend on the delinquency of each loan and the ratio, at the end of each month, between the outstanding principal amount of each loan and the value of the mortgage collateral (loan-to-value or LTV) that covers it.

The relevant provisioning factor according to delinquency and LTV is as follows:

LTV Range	Days past due at month-end	0	1-29	30-59	60-89	Impaired portfolio
LTV ≤ 40%	PNP(%)	1.0916	21.3407	46.0536	75.1614	100
	LGD (%)	0.0225	0.0441	0.0482	0.0482	0.0537
	EL (%)	0.0002	0.0094	0.0222	0.0362	0.0537
40% < LTV ≤ 80%	PNP(%)	1.9158	27.4332	52.0824	78.9511	100
	LGD (%)	2.1955	2.8233	2.9192	2.9192	3.0413
	EL (%)	0.0421	0.7745	1.5204	2.3047	3.0413
80% < LTV ≤ 90%	PNP(%)	2.515	27.93	52.58	79.6952	100
	LGD (%)	21.5527	21.66	21.92	22.1331	22.231
	EL (%)	0.5421	6.0496	11.5255	17.639	22.231
LTV > 90%	PNP(%)	2.74	28.43	53.08	80.3677	100
	LGD (%)	27.2	29.03	29.59	30.1558	30.2436
	EL (%)	0.7453	8.2532	15.7064	24.2355	30.2436

LTV= (Loan-to-Value Ratio) unpaid loan principal/value of the mortgage collateral.

EL = Expected loss

This standardized approach will also be applied to residential leasing transactions, following the same criteria described above and considering the leased asset value equivalent to the amount of the mortgage collateral.

If the same debtor holds more than one residential mortgage loan with the Bank and one is overdue by 90 days or more, all these loans will be assigned to the impaired portfolio, with provisions calculated for each according to their respective LTV percentages.

In the case of residential mortgage loans linked to housing and subsidy programs of the State of Chile, provided that they are contractually covered by the auction insurance supplied by the latter, the provisioning percentage may be weighted by a loss mitigation (LM) factor, which depends on the LTV percentage and the value of the house in the deed of sale (V). Therefore, the LM factors to be applied to the corresponding provisioning percentage are presented in the table below:

Loss mitigation (LM) factor for loans with state auction insurance		
LTV Range	Segment V: Deeded house price (UF)	
	V<1,000	1,000< V ≤ 2,000
LTV ≤ 40%	100	
40% < LTV ≤ 80%		
80% < LTV ≤ 90%	95	96
LTV > 90%	84	89

2. Commercial loan portfolio

Following the CASB, the Bank applies the standard model of provisions for commercial loans in the group portfolio, depending on whether it corresponds to commercial leasing, student or other commercial loans.

Before implementing the standard method, the Bank used internal models to determine provisions for commercial loans assessed on a group basis.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

i. Commercial leasing operations

For these operations the provision factor must be applied to the current value of commercial leasing operations (including the purchasing option at the end of the lease). Therefore, it will depend on the delinquency of each operation, the type of leased asset and the relationship, at the closing of each month, between the current value of each operation and the value of the leased asset (LTV), as indicated in the following tables:

Probability of Non-Performance (PNP) applicable according to delinquency and type of asset (%)		
Days past due at the end of the month	Type of asset	
	Real estate	Non-real estate
0	0.79	1.61
1-29	7.94	12.02
30-59	28.76	40.88
60-89	58.76	69.38
Non-performing portfolio	100	100

Loss Given Default (LGD) applicable by LTV range and type of asset (%)		
LTV range (*)	Real estate	Non-real estate
LTV ≤ 40%	0.05	18.2
40% < LTV ≤ 50%	0.05	57
50% < LTV ≤ 80%	5.1	68.4
80% < LTV ≤ 90%	23.2	75.1
LTV > 90%	36.2	78.9

(*) LTV= Current value of operation/leased asset value

The LTV ratio will be determined considering the appraisal value, expressed in UF for real estate and pesos for non-real estate, recorded at the time of granting the respective loan, considering any situations that may be causing temporary rises in the asset price at that time.

ii. Student loans

For these operations, the provision factor should be applied to the student loan and the exposure of the contingent loans, when applicable. The determination of this factor depends on the type of student loan and the enforceability of the payment of capital or interest at the end of each month. When payment is due, the factor will also depend on the delinquency of the loan. For the loan classification, a distinction is made between those granted for financing higher studies under Law No 20,027 (CAE) and, on the other hand, the CORFO guaranteed loans or other student loans.

Probability of Non-Performance (PNP) according to enforceability, delinquency and type of loan (%)			
Presents payment enforceability or interest at month-end	Days past due at month-end	Type of student loan	
		CAE	CORFO and others
Yes	0	5.2	2.9
	1-29	37.2	15
	30-59	59	43.4
	60-89	72.8	71.9
	Non-performing portfolio	100	100
No	N/A	41.6	16.5

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

Loss Given Default (LGD) and type of asset (%)		
Presents payment enforceability or interest at month-end	Type of student loan	
	CAE	CORFO and others
Yes		70.9
No	50.3	45.8

iii. Other commercial loans and factoring

For factoring transactions and other commercial loans, the provisioning factor, applicable to the amount of the loan and the contingent loan exposure, will depend on the delinquency of each transaction and the ratio at the end of each month between the debtor's obligations to the Bank and the value of the collateral (LTVC) securing them, as indicated in the following tables:

Probability of Non-Performance (PNP) applicable according to delinquency and LTVC range (%)			
Days past due at month-end	Guarantee		No collateral
	LTVC ≤ 100%	LTVC > 100%	
0	1.86	2.68	4.91
1-29	11.6	13.45	22.93
30-59	25.33	26.92	45.3
60-89	41.31	41.31	61.63
Non-performing portfolio	100	100	100

Loss Given Default (LGD) applicable according to LTVC range (%)			
Collateral (with/without)	LTVC Range	Factoring and other commercial loans without responsibility of assignor	Factoring with responsibility of assignor
Collateral	LTVC ≤ 60%	5	3.2
	60% < LTVC ≤ 75%	20.3	12.8
	75% < LTVC ≤ 90%	32.2	20.3
	90% < LTVC	43	27.1
No collateral		56.9	35.9

The collateral used to calculate the LTVC ratio of this method may be of a specific or general nature or those that are simultaneously specific and general in nature. However, a collateral can only be considered if, according to the respective coverage clauses, it was set in the first degree of preference in favor of the Bank and it only guarantees the debtor's credits concerning which it is attributed (not shared with other debtors). The invoices assigned in the factoring operations, or the guarantees linked to mortgage loans, regardless of their coverage clauses, will not be considered in the calculation.

The following considerations must be taken into account when calculating the LTVC ratio:

- Transactions with specific guarantees: those in which the debtor provided specific guarantees for generic commercial loans and factoring. The LTVC ratio is calculated separately for each secured transaction as the division between the loan amount and the contingent loan exposure over the collateral's value.
- Transactions with general guarantees: when the debtor is granted general or general and specific guarantees, the Bank calculates the corresponding LTVC jointly for all generic commercial loans, factoring and operations not contemplated in the above paragraph i), as the division between the sum of the amounts of loans and contingent loan exposures over the general or specific guarantees that, according to the scope of the remaining coverage clauses, protect the loans considered in the numerator of the ratio mentioned above.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

The amounts of collateral used in the LTVC ratio in (i) and (ii) should be determined according to the:

- The collateral's last valuation, whether in its appraisal or fair value, depending on the type of collateral in question. The criteria in Chapters 7-12 of the Updated Collection of Banking Regulations (from now on: UCBR) should be considered to determine fair value.
- Possible situations that could be causing temporary rises in the values of the collaterals.
- Limits to the amount of coverage established in their respective clauses.

3. Consumer loan portfolio

Expected Loss (EL), which corresponds to the product of Probability of Default (PD) and Loss Given Default (LGD), will be uniformly applied to all consumer loans and contingent loans that the borrower holds with the bank and its subsidiaries in Chile, including consumer leasing operations. In the case of contingent operations, the exposure measure must be calculated in accordance with the provisions set forth in Chapter B-3 of the CASB issued by the FMC, the latest update which was published on March 6, 2024 (Circular No. 2,346).

To define the value of the PNP, the following factors must be calculated for each borrower:

- Delinquency level at the bank: this corresponds to the maximum delinquency level (in days) in the consumer portfolio, including consumer leasing operations, that the borrower has with the bank at the end of the month for which provisions are being determined. For clients with more than one operation, the highest value among them will be used. This variable must be measured across all entities that make up the institution's global consolidated level.
- 30-day delinquency in the financial system: this indicates whether the borrower has at least one direct debt with delinquency equal to or greater than 30 days in any of the 3 months prior to the provisioning month. To construct this variable, the borrower's delinquency across all known credit providers should be considered, using the debtor list compiled by the FMC, as well as the Bank's own global consolidated data and various financial products. Only debts with communication restrictions under Law No. 19,628 on the Protection of Private Life should be excluded.
- Ownership of a mortgage loan: this variable identifies whether the borrower has a current residential mortgage loan in the financial system. For this, the Bank must use the most recent available information at the time provisions are calculated, considering the debtor list compiled by the FMC, in addition to the Bank's own global consolidated data.

Based on the above variables, the PNP is determined according to the following table:

Maximum level of delinquency in the month and bank (interval in days that includes extremes)	With a residential mortgage loan in the system		Without a residential mortgage loan in the system	
	No over due loans of more than 30 days in the system	With over due loans of more than 30 days in the system	No over due loans of more than 30 days in the system	With over due loans of more than 30 days in the system
0 and 7	3.3%	14.6%	6.6%	19.8%
8 and 30	20.4%	41.6%	30.6%	48.5%
31 and 60	50.2%	63.0%	65.1%	66.3%
61 and 89	62.6%	81.7%	72.3%	86.9%

If the borrower is in default (>90 days), the assigned PNP will be 100%.

To determine the value of the LGD, it must be identified whether the borrower has a residential mortgage loan in the system (as defined for PNP), and the type of loan involved. The LGD to be used is defined in the table below:

	Leasing operations and auto loans	Installments loans	Credit card, overdraft and other consumer loans
With residential mortgage loan in the system	33.2%	47.7%	49.5%
Without residential mortgage loan in the system	33.2%	56.6%	60.3%

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

The assignment of the LGD value should follow these guidelines:

- "Leasing operations and auto loans" include loans whose purpose is to finance the acquisition of personal-use vehicles, which are pledged as collateral in favor of the institution. This category also includes financial consumer leasing operations recorded under item 148000400 of the CASB of the FMC.
- "Installment Loans" correspond to those recorded under item 148000100 of Chapter C-3 of the CASB (Consumer loans in installments), provided they were granted following the signing of a promissory note that clearly states the principal amount, term, interest rate, and number of installments, without a predefined use of the funds (unrestricted use by the borrower), and do not fall into the previous category.
- If a loan does not fall under either of the two definitions above but is classified under line 148000000 (Consumer loans) of the CASB, the LGD value assigned to the "Credit cards, credit lines, and other consumer loans" category should be applied.

C. Provisions for contingent loans

Contingent loans are transactions or commitments in which the Bank assumes a credit risk by obliging itself vis-à-vis third parties upon a future event to make a payment or a disbursement to be recovered from its clients.

To calculate the provisions as indicated in Chapter B-1 of the CASB, the amount of exposure to be considered shall be equal to the percentage of the contingent claim amounts indicated below:

Type of loan	Credit Translation Factors (CTF)
Immediately repayable unrestricted credit lines	10%
Contingent loans linked to student loan (CAE)	15%
Letters of credit for goods movement operations	20%
Other unrestricted credit lines	40%
Debt purchase commitments in local currencies abroad	50%
Transactions related to contingent events	50%
Guarantees and sureties	100%
Other credit commitments	100%
Other contingent loans	100%

In the case of transactions with clients with non-performing loans, such exposure shall always equal 100% of their contingent loans.

D. Collateral and credit enhancements

Collateral is only considered in calculating provisions when they are legally established and when the conditions allowing their eventual activation or settlement in the Bank's favor are met. Collateral valuation (mortgages or pledges) reflects the net cash flow obtained from selling goods or equity instruments, or from capital minus estimated expenses in the event of a debtor's non-performance.

For mortgages and pledges on goods, the Bank undertakes analyses that reflect the relationship between the prices obtained in an eventual settlement and their appraisal or foreclosure values. Nevertheless, the valuations of mortgages and other goods received are based on valuations carried out by independent professionals, while maintenance and transaction costs are based on historical data from at least 3 years prior. The Bank has the necessary collateral revaluation standards in place.

Financial collateral, measured through fair value adjustments, may only be deducted from credit risk exposures when they are provided to secure the performance of the credits concerned. The adjusted fair value is obtained by applying the interest rate and currency volatility discount factors established by the FMC and subtracting settlement costs. Determining provisions in the case of leased assets considers the value obtained on the disposal of the leased assets, considering the impairment that these may present, and the expenses related to their redemption and liquidation or eventual relocation. Determining provisions for factoring loans considers that the counterparty is the assignor of the documents endorsed to the Bank when the factoring is with liability and the debtor when the assignment is without liability of the assignor.

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued**E. Additional provisions**

According to FMC regulation, banks can establish provisions over the already described limits to protect themselves from the risk of non-predictable economic fluctuations that could affect the macroeconomic environment or a specific economic sector. As set out in number 9 of Chapter B-1 of the CASB of the FMC, these provisions shall be reported on the liability side in the same way as provisions on contingent claims.

F. Provisions related to financing with FOGAPE guarantee Covid-19

The FMC requested that specific provisions be determined for loans secured by the FOGAPE Covid-19 guarantee, for which the expected loss must be determined. This is done by estimating the risk of each transaction, dismissing the guarantor's credit quality substitution, and following the appropriate individual or group analysis method per the clauses of the CASB Chapter B-1. This calculation must be made on an aggregate basis, grouping all transactions to which the same deductible percentage is applicable.

Hence, the total expected loss resulting from the aggregate calculation of each transaction group must be compared with the total deductible corresponding to them. When the expected loss of the transactions of a group with the same deductible percentage is determined to be equal to or less than the aggregate deductible, the provisions are set without considering the FOGAPE Covid-19 guarantee, that is, without replacing the creditworthiness of the direct debtor for that of the guarantor. When they surpass the aggregate deductible, the provisions shall be determined using the substitution method set out in the CASB paragraph 4.1(a) of Chapter B-1 and shall be recognized in accounts separate from commercial, consumer and residential mortgage provisions.

G. Provisions established for credit risk as a result of supplementary prudential requirements

This corresponds to the provisions for credit risk required by the Committee's prudential instructions in relation to credit risk management assessments under Chapters 1-13 of the UCBR and that do not qualify as provisions established per the definitions in Chapter B-1 of the CASB.

H. Distressed loans and suspension of accrual

Distressed loans, in the case of individual assessment, is made up of the loans classified in the Impaired Portfolio plus categories B3 and B4 of the Substandard Portfolio. In the case of group assessment, it includes the credits of the Impaired Portfolio.

The Bank ceases to recognize income on an accrual basis in the Interim Consolidated Statements of Income when the loan or one of its installments is 90 days overdue. From the date interest is suspended until they are no longer impaired, loans shall not be credited with interest, adjustments or fees in the Interim Consolidated Statements of Financial Position. No income from such loans shall be recognized in the Interim Consolidated Statements of Income unless effectively received.

I. Charge-offs

As a general rule, charge-offs should be applied when the contractual rights to the cash flows expire.

The charge-offs in question refer to the derecognition in the Interim Consolidated Statements of Financial Position of the assets corresponding to the respective transaction, including that part which may not be overdue in the case of a loan payable in installments or a leasing transaction (there are no partial charge-offs). This includes overdue, past-due and current installments, with the term corresponding to the time elapsed since the date on which payment of all or part of the obligation is in delinquency.

Charge-offs are always booked against the credit risk provisions set up under Chapter B-1 of the CASB, regardless of the reason for the write-off.

Charge-offs should be carried out in the following circumstances, whichever occurs first:

1. Based on all available information, the Bank concludes that it will not obtain flows from the loans recorded as an asset.
2. When an unencumbered claim is 90 days old since it was registered as an asset.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

3. Upon expiration of the statute of limitations for actions to claim collection through an enforceable judgment or at the time of the rejection or abandonment of the enforcement of the title by an enforceable court decision.
4. When the period of arrears of a transaction reaches the time limit for charge-offs set out below:

Type of loan	Term
Consumer loans with or without collateral	6 months
Other transactions without collateral	24 months
Commercial loans with collateral	36 months
Mortgage loans	48 months
Consumer leasing	6 months
Other non-mortgage leasing transactions	12 months
Mortgage leasing (household and business)	36 months

J. Recovery of loans previously written off and receivables from clients

Subsequent payments on written-off transactions shall be recognized in the profit or loss statement as recoveries of charged-off loans.

When a recovery is perceived in the form of an asset received in lieu of payment, the income is recognized as the amount by which they are incorporated into the asset under the provisions of the Chapter of the CASB regarding Assets Received or Awarded in Lieu of Payment.

The same approach is followed if the leased goods are recovered after a leased transaction is written off when such goods are incorporated as an asset.

18. Impairment of financial assets other than loans and receivables and contingent loans

The Bank applies IFRS 9 'Financial Instruments' to determine the impairment of financial assets measured at fair value through other comprehensive income and financial assets at amortized cost other than loans and contingent receivables.

The estimate involves calculating the potential credit losses that could be observed on a financial instrument due to differences between the future cash flows under the original contract and the cash flows expected to be received, always ensuring at all times that the results obtained are appropriate to the reality of the transactions, the current economic environment and the available forward-looking information.

This model uses a dual measurement approach in which the impairment provision is measured as follows:

- Credit loss expected at 12 months: it represents expected credit losses arising from default events on a financial instrument that may arise within 12 months from the reporting date.
- Lifetime expected credit loss: it represents the expected credit losses arising from default events over the expected life of a financial instrument.

At each reporting date, an entity must measure the provision as equal to the 'lifetime expected credit loss' if the credit risk on that financial instrument has increased significantly since initial recognition. Otherwise, if the credit risk of a financial instrument has not increased significantly at the reporting date since initial recognition, an entity shall measure the loss allowance for that financial instrument at an amount equal to 'expected credit loss over the next 12 months'.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

When making such an assessment, an entity compares the default risk of a financial instrument at the reporting date with that of its initial recognition, as well as considering reasonable and tenable information made available without unnecessary cost or effort, indicating the growth of credit risk since its initial recognition (on a group or individual basis). Based on changes in credit quality, IFRS 9 describes a 'three-step' impairment model according to the following diagram:

Change in credit quality since initial recognition		
Phase 1	Phase 2	Phase 3
Initial recognition	Significant increase in credit risk since initial recognition	Credit-impaired assets
Credit loss expected in 12 months	Lifetime credit loss	Lifetime credit loss

Reasonable and tenable information refers to information readily available at the reporting date without unreasonable cost or effort, including information about past events, current conditions and forecasts of future economic conditions. When contractual payments are overdue by 30 days or more, the Bank considers that the credit risk of a financial asset has increased significantly, but this is not the only indicator.

Measurement of expected credit loss

Expected credit loss estimates the weighted probability of credit losses over the financial instrument's expected life, that is, the present value of all cash shortfalls. The three components of the measurement of expected credit loss are:

- **PNP:** The probability of default estimates the probability of non-performance over a given time frame.
- **LGD:** Loss-given default estimates the loss that would occur in the event of a default at a given time.
- **EAD:** Exposure at default is an estimate of the exposure at a future date of non-performance, considering expected exposure changes after the reporting date, including repayments of principal and interest, whether contractually scheduled or otherwise, and interest on defaults.

The parameters used for the calculation of impairment provisions were developed based on the structure of the internal models used and take into account the experience acquired in the regulatory and management areas, as well as the stages in which each financial asset is classified, including forward-looking information, point-in-time (PIT) view, multiple scenarios, calculation of losses for the entire life of the operation through lifetime PNP, among others. Collateral and other credit enhancements are considered to measure expected credit loss.

Determination of a significant increase in risk

For the classification in phase 2, an assessment of whether there is a significant increase in credit risk (SICR) from the initial recognition of the transactions is undertaken. For this, a series of principles that ensure that all financial instruments are subject to this assessment is used, which considers the particularities of each portfolio and type of product based on various quantitative and qualitative indicators. All of this is subject to the expert judgment of analysts, who set the thresholds under appropriate management integration and implement it under the approved governance.

The judgment and criteria used to establish thresholds are based on several principles. The principles are as follows:

- **Universal:** all financial instruments with a credit rating must be assessed for their potential SICR.
- **Proportional:** the definition of the SICR should consider each portfolio's particularities.
- **Materiality:** its implementation should also be consistent with each portfolio's relevance to avoid unnecessary cost or effort.
- **Holistic view:** the selected approach should combine the most relevant aspects of credit risk (i.e. quantitative and qualitative).
- **Application of IFRS 9:** the approach should consider the features of IFRS 9, focusing on a comparison with credit risk at initial recognition and considering forward-looking information.
- **Risk management integration:** criteria should be consistent with those metrics considered in day-to-day risk management.
- **Documentation:** Appropriate documents must be prepared

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

To classify a financial instrument in phase 2, we consider the following criteria:

- Quantitative criteria: changes in the risk of a default occurring over the expected life of the financial instrument are analyzed and quantified relative to its level of credit risk at inception. For this purpose, quantitative thresholds have been defined for the portfolios. These thresholds can be expressed as an absolute or relative increase in the probability of default.
- Qualitative criteria: using expert judgment, we use various indicators aligned with those used in ordinary credit risk management (defaults over 30 days, refinancing, etc.).
- Definition of default: this definition entails the application of various criteria to classify exposures as phase 3, including transactions in default for 90 consecutive days or identifying other criteria that demonstrate that the counterparty can meet all of its financial obligations.
- Expected life of the financial instrument: we estimate the expected life of a financial instrument considering all contractual terms (e.g. prepayments, duration, repurchase agreements, etc.).

Recognition of expected credit loss

An entity shall recognize in its financial results a gain or loss caused by value impairment as the amount of the expected credit loss (or releases) by which the value is adjusted given the losses that have occurred by the reporting date to capture the amount that requires recognition accurately.

For assets measured at fair value through other comprehensive income, the book value of the instruments is understood as the fair value. Therefore, the recognition of impairment does not affect the carrying amount of such instruments and is reflected as a movement between other comprehensive income (a deduction from fair value) and results at each reporting date.

In the case of assets measured at amortized cost, impairment is presented through a complementary account that reduces the asset's value.

19. Impairment of non-financial assets

The Bank's non-financial assets are reviewed at each reporting date of the Interim Consolidated Financial Statements for indications of impairment (i.e., when the carrying amount exceeds the recoverable amount). If such indications exist, the asset's recoverable amount is estimated to determine the extent of the impairment loss.

The recoverable amount is the higher of fair values minus disposal costs and value in use. In assessing value in use, estimates of cash inflows or outflows shall be discounted to present value using the pre-tax discount rate that reflects the current market assessment of the time value of money and the specific risks for which estimates of future cash flows have not been adjusted.

If the recoverable amount of an asset is estimated to be lower than its carrying amount, the carrying amount is reduced to the recoverable amount. The impairment loss is recognized immediately in profit or loss.

In relation to other assets, impairment losses recognized in prior periods are evaluated at each reporting date for any indication that the loss has decreased and should be reversed. The increase in the carrying value of an asset other than goodwill attributed to a reversal of the impairment loss will not exceed the carrying amount that could have been obtained (net of amortization or depreciation) if an impairment loss had not been recognized for said asset in previous periods. The impairment loss recognized in goodwill will not be reversed.

20. Provisions, contingent assets and liabilities

Provisions are liabilities whose amount or maturity are uncertain. These provisions are recognized in the Interim Consolidated Statements of Financial Position when all the following requirements are met:

- It is a current obligation (legal or constructive) as a result of past events and,
- as of the publication date of the financial statements, the Bank will probably have to expend resources to settle the obligation and;
- the amount of these resources can be reliably measured.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

Contingent assets or contingent liabilities encompass all potential rights or obligations arising from past events. These are only confirmed if one or more uncertain future events occurs, which are not within the Bank's control.

The Interim Consolidated Financial Statements reflect all significant provisions for which the probability of meeting the obligation is estimated to be more likely than not. Provisions are quantified using the best available information regarding the consequences of the event giving rise to them and are reviewed and adjusted at the end of the accounting period. Provisions are used when the liabilities for which they were originally recognized are settled. Partial or total reversals are recognized when such liabilities cease to exist or are reduced.

Provisions are classified according to the obligation covered as follows:

- Provisions for employee benefit obligations.
- Provisions for lawsuits and litigations.
- Provisions for operational risk.
- Provisions for mandatory dividends.
- Provisions for contingent loan risks.
- Provisions for contingencies.

21. Income tax and deferred taxes

The Bank recognizes, where appropriate, deferred tax assets and liabilities for the estimated future tax effects attributable to differences between the carrying amounts of assets, liabilities and their tax bases. Deferred tax assets and liabilities are calculated using the tax rate applied in the year the deferred tax assets and liabilities are realized or settled according to current tax legislation. The future effects of tax legislation or tax rate changes are recognized in deferred taxes from when the law approving such changes is published.

Current tax assets relate to provisional payments in excess of the provision for income tax or other income tax credits, such as training expenses or donations to universities. In addition, the monthly provision payments to be recovered for profits absorbed by tax losses should be included. In the case of liabilities, they correspond to the provision for income tax calculated based on the tax results for the period, minus the mandatory or voluntary provisional payments and other credits applied to this obligation.

For presentation in the Interim Consolidated Statements of Financial Position, in accordance with IAS12, tax positions should be offset at the individual taxable entity level, as appropriate, and the resulting net balances for each taxable entity should then be aggregated at the consolidated level.

22. Employee benefits**i. Post-employment benefits – Defined Benefit Plan:**

According to the current collective labor covenant and other agreements, Banco Santander-Chile has an additional benefit available for its main executives, consisting of a pension plan, aiming for them to have the necessary funds for a supplementary pension upon retirement.

Plan Features:

The main features of the Post-Employment Benefits Plan promoted by the Banco Santander-Chile are:

- i. Aimed at the Bank's upper management.
- ii. The general requirement is that the beneficiary must still hold their position within the Bank by the time they turn 60 years old.
- iii. The Bank will contract a mixed collective insurance policy (life and savings) for each executive, with the contracting party and beneficiary being the Group company to which the executive belongs. Periodic contributions will equal the amount each manager commits to their voluntary contribution plan.
- iv. The Bank will be responsible for granting the benefits directly.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

To determine the present value of the defined benefit obligation and the current service cost, the projected unit credit method is used. The components of defined benefit cost include:

- Current and past service costs are recognized in profit or loss for the period.
- Net interest over the net defined benefit liability (asset), recognized in profit or loss for the period.
- The new net defined benefit liability (asset) measurements include: (a) actuarial gains and losses; (b) the performance of the plan's assets, and (c) changes in the effect of the asset ceiling, which are recognized in other comprehensive income.

The net defined benefit liability (assets) is the deficit or surplus, calculated as the difference between the defined benefit obligation's present value minus the plan assets' fair value.

The plan assets comprise the insurance policies contracted by the Bank through an unrelated third party. These assets are held by an entity legally separated from the Bank and exist solely to pay employees their benefits.

The Bank recognizes the present service cost and the net interest in the item "Expenses from obligations to employees" in the Interim Consolidated Statements of Income. The plan's structure does not generate actuarial gains or losses. The plan's performance is established and fixed during the period; consequently, there are no changes to the asset's ceiling. Accordingly, there are no amounts recognized in other comprehensive income.

The post-employment benefits obligation recognized in the Interim Consolidated Statements of Financial Position, represents the deficit or surplus in the defined benefit plans of the Bank. Any surplus resulting from the calculation is limited to the present value of any economic benefits available regarding the plan's reimbursements or reductions to future contributions.

When employees abandon the plan before meeting the requirements to become eligible for the benefit, the Bank's contributions to these plans decreases.

ii. Severance payments:

Severance payments for years of employment are recorded only when they effectively occur or upon the availability of a formal and detailed plan in which the fundamental modifications to be made are identified, provided that such plan has already started to be implemented, its principal features have been publicly announced, or objective facts about its activation are known.

iii. Cash-settled share-based payments

The Bank allocates cash-settled share-based payments to certain executives of the Bank and its Subsidiaries under IFRS 2: Share-based payments. Accordingly, the Bank measures the services received and the obligation incurred at fair value.

Until the obligation is settled, the Bank calculates the fair value at the end of each reporting period and at the date of settlement, recognizing any change to fair value in the income statement for the period.

23. Use of Estimates

Preparing the Interim Consolidated Financial Statements requires the Bank's Management to make estimates and assumptions that affect the application of the accounting standards and the reported values of assets, liabilities, revenues and expenses. Accordingly, actual results may differ from these estimates.

In certain cases, the generally accepted accounting standards require that assets or liabilities be recorded or disclosed at their fair value. The fair value is the price received to sell an asset or paid to transfer a liability in an orderly transaction between informed market participants at the measurement date. When available, quoted market prices in active markets have been used for measurement. When the trade prices of an active market are not available, the Bank estimates such values based on the best information available, including internal modelling and other valuation techniques.

The Bank has established provisions to cover potential credit loss per the regulations issued by the FMC. These allowances must be regularly reviewed, considering factors such as changes in the nature and volume of the loan portfolio, trends in forecasted portfolio quality, credit quality, and economic conditions that may adversely affect the borrowers' ability to pay. Increases in the allowances for loan loss are reflected as 'Provisions for loan loss' in the Interim Consolidated Statements of Income.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 02 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES, continued

Loans are written off when the contractual rights for the cash flows expire. Nevertheless, the Bank will charge off per Title II of Chapter B-2 of the CASB issued by the FMC for loans and accounts receivable from clients. Charge-offs are recorded as a reduction of credit risk provisions.

The Bank's Management regularly reviews the relevant estimates and assumptions to calculate provisions quantifying certain assets, liabilities, revenues, expenses, and commitments. Revised accounting estimates are recorded in the period the estimate is revised and in any future period affected.

These estimates are based on the best available information and mainly refer to the following:

- Allowances for loan loss (Notes N° 13 and 41).
- Impairment loss on certain assets (Notes N°11, 13, 15, 16, 17, 39 and 40).
- The useful lives of tangible and intangible assets (Notes N° 15, 16 and 17).
- The fair value of assets and liabilities (Notes N° 8, 11, 12, 21 and 44).
- Commitments and contingencies (Note N° 29).
- Current and deferred taxes (Note N°18).

24. Earnings per share

Basic earnings per share are calculated by dividing the net income attributable to the equity holders of the Bank by the weighted average number of shares outstanding during the reported period. Diluted earnings per share are calculated similarly to basic earnings, but the weighted average number of outstanding shares is adjusted to consider the potential diluting effect of stock options, warrants, and convertible debt. As of June 30, 2026, and 2025, and as of December 31, 2025, the Bank did not hold any instruments that have a dilutive effect on equity.

25. Temporary acquisition (assignment) of assets

Purchases (sales) of financial assets under non-optional repurchase agreements at a fixed price (repos) are recorded in the Interim Consolidated Statements of Financial Position as a financial assignment (receipt) based on the nature of the debtor (creditor) under 'Deposits in the Central Bank of Chile', 'Deposits in financial institutions' or 'Loans and receivables from customers' ('Deposits from Central Bank of Chile', 'Deposits from financial institutions' or 'Deposits').

The difference between the purchase and sale prices is recorded as financial interest over the contract's life.

26. Assets and investment funds managed by the Bank

The assets managed by the different companies that form part of the Bank's consolidation perimeter (Santander S.A. Sociedad Securitizadora) that are owned by third parties are not included in the Interim Consolidated Statements of Financial Position. The commissions generated by this activity are included in the balance of 'Fee and commission income' in the Interim Consolidated Statements of Income.

27. Provision for mandatory dividends

The Bank recognizes a liability (provision) for minimum or mandatory dividends based on the provisions of Article 79 of the Chilean Corporations Law (Ley de Sociedades Anónimas), consistent with the Bank's internal dividend policy, which stipulates that at least 30% of net income for the year shall be distributed, unless otherwise agreed at the respective Shareholders' Meeting by the unanimous vote of the issued shares.

For 2026 and 2025, the percentage used for the minimum dividend provision is 60%. This provision is recorded as a reduction of "Retained earnings" under the caption "Provision for dividends, interest payments and revaluation of equity financial instruments" within the Interim Consolidated Statements of Changes in Equity.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 03 - NEW ACCOUNTING PRONOUNCEMENTS ISSUED AND ADOPTED OR ISSUED AND NOT YET ADOPTED**1. Pronouncements issued and adopted**

As of the date these Interim Consolidated Financial Statements were published, the new accounting pronouncements issued by both the FMC and the International Accounting Standards Board, which the Bank has fully adopted, are set out below:

a. Accounting Standards issued by the Financial Markets Commission.

NCG No. 537 – Amends Chapter 8-41 of the Updated Compilation of Bank Regulations (UCBR) and Circular No. 1 for Non-Bank Card Issuers regarding the determination of a formula for calculating the minimum payment amount on credit cards, and the exceptional situations in which debtors will be released from this obligation. On June 4, 2025, the FMC issued this amendment, aimed at including a formula for calculating the minimum payment amount on credit cards. NCG No. 537 amends Chapter 8-41 of the UCBR and Circular No. 1 for Non-Bank Issuers. The amendment to Chapter 8-41 of the UCBR includes a new section 5, "Special rules on credit cards", which establishes a formula and the variables to be considered in calculating the minimum amount that borrowers of money credit operations —originating from the use of credit cards through a revolving or consolidated credit line— must pay monthly to avoid delinquency. The minimum payment is the lowest amount the cardholder must pay each month to remain current. The mathematical formula consists of a percentage of the total billed amount, which requires defining the "non-financeable amount" (NFA) and the "financeable amount" (FA), where: $\text{Minimum Payment} \geq (100\% \times \text{NFA}) + (5\% \times \text{FA})$

This regulation came into force on June 4, 2025 with gradual application starting 12 months after its publication, following the mathematical expression for calculation set out in NCG No. 537. *The Bank has completed the implementation of this regulation, within the established deadlines.*

b. Accounting Standards Issued by the International Accounting Standards Board.

Amendment to IFRS9 and IFRS7 - amendment to the Classification and Measurement of Financial Instruments. The modifications are:

Amendments to IFRS 9 – Classification of Financial Assets:

- Financial assets with ESG and similar features: Financial assets with contingent events may pass the SPPI Test if their cash flows are SPPI both before and after the contingent event, and the cash flows do not differ significantly from those of a similar asset without such a contingent event.
- Derecognition of financial liabilities settled through electronic transfer: An accounting policy option is allowed to derecognize such liabilities before the settlement date if certain conditions are met. If this option is chosen, it must be applied to all agreements settled through the same electronic payment system.

Amendments to IFRS 7:

- Investments in equity instruments designated at fair value through OCI: Entities must disclose the fair value result presented in OCI during the period, distinguishing the result from changes in fair value from the result due to derecognition.
- Contractual terms that may change the timing or amount of contractual cash flows: Disclosure is required for contractual terms that may modify the timing or amount of cash flows upon the occurrence (or non-occurrence) of a contingent event that is not directly related to changes in basic lending risks or costs. This applies to assets measured at amortized cost or fair value through OCI and to financial liabilities measured at amortized cost.

These amendments are effective for annual periods beginning on or after January 1, 2026. Early application is permitted. *The Bank has determined that there are no significant impacts related to the adoption of this standard.*

Annual Improvements to IFRS – Volume 11. This standard, issued on July 18, 2024, by the International Accounting Standards Board (IASB), addresses minor but necessary non-urgent amendments to the following five Standards:

- IFRS 1 – First-time Adoption of International Financial Reporting Standards
- IFRS 7 – Financial Instruments: Disclosures
- IFRS 9 – Financial Instruments
- IFRS 10 – Consolidated Financial Statements
- IAS 7 – Statement of Cash Flows

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 03 - NEW ACCOUNTING PRONOUNCEMENTS ISSUED AND ADOPTED OR ISSUED AND NOT YET ADOPTED, continued

The published amendments will be effective for annual periods beginning on or after January 1, 2026, with early application permitted. *The Bank has determined that there are no significant impacts related to the adoption of this standard.*

IFRS 9 and IFRS 7 – Renewable Energy Power Purchase Agreements. Issued on December 18, 2024, the amendments include:

Amendments to IFRS 9 – Financial Instruments:

- The own-use requirements in IFRS 9 have been modified to include factors that an entity must consider when applying the scope of IFRS 9 (paragraph 2.4) to renewable energy power purchase agreements, for both the purchase and receipt of renewable electricity.
- The hedge accounting requirements have also been amended to allow an entity to use a renewable electricity contract as a hedging instrument by designating a variable volume of forecast electricity transactions as the hedged item, provided specified criteria are met, and measuring the hedged item using the same volume assumptions as those used for the hedging instrument.

Amendments to IFRS 7 – Financial Instruments: Disclosures:

- Specific qualitative and quantitative disclosure requirements are introduced for electricity contracts, depending on their nature and specified characteristics.

The published amendments will be effective for annual reporting periods beginning on or after January 1, 2026, with early application permitted. *The Bank has determined that there are no impacts arising from this standard.*

2. Issued pronouncements which have not yet been adopted

As of the reporting date of these Interim Consolidated Financial Statements, new International Financial Reporting Standards had been published, as well as their interpretation and the FMC standards, which were not mandatory as of June 30, 2026. Accordingly, while the IASB permits an early application in some cases, the Bank has not undertaken its application by such date.

a. Accounting Standards issued by the Financial Markets Commission

There are no new FMC regulations that apply to the present Consolidated Interim Financial Statements.

b. Accounting Standards issued by the International Accounting Standards Board

IFRS 18 – Presentation and Disclosures in Financial Statements. On April 9, 2024, the IASB issued IFRS 18, which replaces IAS 1: Presentation of Financial Statements. IFRS 18 introduces three sets of new requirements aimed at improving the information on financial performance and providing a better basis for analyzing and comparing companies:

- Improved comparability of the statement of profit or loss
- Greater transparency of management-defined performance measures
- More useful aggregation of information in the financial statements

IFRS 18 becomes effective for annual reporting periods beginning on or after January 1, 2027, with early application permitted. *The Bank is in the process of analyzing this standard.*

IFRS 19 Subsidiaries without Public Accountability: Disclosures. This standard specifies the disclosure requirements applicable to subsidiaries that do not have public accountability and whose parent prepares consolidated financial statements that are publicly available and comply with IFRS Accounting Standards.

On August 19, 2025, amendments were issued permitting subsidiaries without public accountability to apply IFRS Accounting Standards with reduced disclosure requirements, thereby exempting them from most of the disclosure requirements contained in other IFRS Accounting Standards. These amendments enable eligible subsidiaries to reduce their disclosure requirements and align the standard's effective date.

With these updates, IFRS 19 has been aligned to incorporate disclosure requirements issued up to January 1, 2027, when the standard will become fully effective. This standard is effective for annual reporting periods beginning on or after January 1, 2027, with earlier application permitted. *The Bank is currently assessing the impact of this standard.*

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 03 - NEW ACCOUNTING PRONOUNCEMENTS ISSUED AND ADOPTED OR ISSUED AND NOT YET ADOPTED, continued

Translation to a Hyperinflationary Presentation Currency (Amendments to IAS 21). Through amendments issued on November 13, 2025, the IASB amended IAS 21 to clarify how an entity translates its financial statements when the presentation currency (rather than the functional currency) is hyperinflationary. These amendments address a gap in the previous requirements, which only addressed hyperinflation in the functional currency.

The amendments are effective for annual reporting periods beginning on or after January 1, 2027, with earlier application permitted. *The Bank has assessed that these amendments are not applicable to the Bank under the current circumstances.*

Amendments to IAS 28: Amendments relating to the Fair Value Option for Investments in Associates and Joint Ventures. Through amendments issued on June 26, 2026, the IASB made targeted amendments to clarify which investments in associates and joint ventures may be measured using the fair value option provided in IAS 28 Investments in Associates and Joint Ventures. The IASB identified diversity in practice regarding the interpretation of the scope of investments to which this option applies. Consequently, the amendments clarify that entities whose principal business activity consists of investing in specific types of assets (as listed in paragraph 49(a) of IFRS 18) may elect to measure an investment in an associate or a joint venture at fair value through profit or loss in accordance with IFRS 9.

These amendments will become effective when an entity first applies IFRS 18. *The Bank is currently assessing the scope of these amendments in the context of its IFRS 18 implementation.*

NOTE 04 - ACCOUNTING CHANGES

As of the date these Interim Consolidated Financial Statements were issued, there were no accounting changes to disclose.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 05 - SIGNIFICANT EVENTS

As of June 30, 2026, the following events have been recorded that in the opinion of the Bank's management are relevant and that have influenced the Bank's operations in the Interim Consolidated Financial Statements.

Board of Directors

On March 24, 2026, at an ordinary meeting of the Board of Directors, the Board agreed to convene an Ordinary Shareholders' Meeting for April 28, 2026, in order to propose a distribution of profits and payment of dividend of 60% of the accumulated profits as of December 31, 2025, equivalent to \$3.35334632 per share and to propose that the remaining 40% of the profits to be used to increase reserves and/or retained earnings.

In addition, an Extraordinary Shareholders' Meeting has been called for April 28, 2026, to be held immediately following the conclusion of the Ordinary Shareholders' Meeting, primarily to consider amendments to the Bank's bylaws to align them with gender parity regulations and to eliminate the position of Second Vice Chairman of the Board of Directors.

Additionally, at the aforementioned meeting, the Board acknowledged the resignation of Mr. Claudio Melandri Hinojosa as a director and Chairman of the Bank's Board of Directors and appointed Mr. Rodrigo Vergara Montes as the new Chairman, effective immediately. The position of director will remain vacant until the election of the Board of Directors to be held on the date indicated above.

Annual Shareholders' Meeting

At the Annual Shareholders' Meeting of Banco Santander-Chile held on April 28, 2026, in addition to approving the 2025 consolidated financial statements, shareholders approved the distribution of 60% of the net income for the year ("Profit attributable to the Bank's shareholders"), which amounted to Ch\$1,053,209 million. This distribution represents a dividend of Ch\$3.533346317 per share, for a total distribution of Ch\$631,925 million.

Shareholders also approved allocating the remaining 40% be, in part, destined to increase Retained Earnings from prior years by the amount required to cover the payment of the next three interest coupons on perpetual bonds, totaling Ch\$29,904 million, and to increase the Bank's Reserves and Other Retained Earnings by Ch\$391,380 million.

At the same Annual Shareholders' Meeting, shareholders approved the appointment of PricewaterhouseCoopers Consultores Auditores as the Bank's external auditor for fiscal year 2026.

In addition, the following individuals were elected as principal directors: Rodrigo Vergara Montes (Independent), Orlando Poblete Iturrate (Independent), Félix de Vicente Mingo (Independent), Blanca Bustamante Bravo (Independent), José Francisco Doncel Razola, Mónica López-Monis Gallego, Gloria Hutt Hesse (Independent), María Francisca Yañez Castillo (Independent), and Juan Benavides Feliú (Independent). Alfonso Gómez and Juan Pedro Santa María, both independent, were elected as alternate directors

Subsidiaries

On January 27, 2026, at the Extraordinary Shareholders' Meeting of Banco Santander-Chile, it was agreed to accept the offer and conditions proposed by Getnet Payments, S.L. to Banco Santander-Chile and Santander Asesorías Financieras Limitada S.A. for the acquisition of 49.99% of the shares of the subsidiary Sociedad Operadora de Tarjetas de Pago Santander Getnet Chile S.A.

On February 2, 2026, Banco Santander Chile and Santander Asesorías Financieras Limitada executed the purchase and sale agreement through which they sold 49.98% and 0.01%, respectively, of the shares of Sociedad Operadora de Tarjetas de Pago Santander Getnet Chile S.A. to Getnet Payments S.L. As a result of this transaction, Banco Santander Chile retained control of Sociedad Operadora de Tarjetas de Pago Santander Getnet Chile S.A., maintaining ownership of 50.01% of the shares. The sale price amounted to Ch\$68,000 million, generating a net effect on equity attributable to the Bank's owners of Ch\$26,107 million.

On June 25, 2026, Santander Asesorías Financieras Limitada changed its corporate name to Santander Consumer Leasing Limitada, and its corporate purpose was amended to engage in leasing transactions involving all types of tangible movable property. The company approved the distribution of profits totaling Ch\$1,281 million, of which Ch\$1,269 million was distributed to Banco Santander-Chile and Ch\$12 million to Santander Chile Holding S.A. In addition, the company increased its share capital by Ch\$1,281 million. Accordingly, as of June 30, 2026, the share capital of Santander Consumer Leasing Limitada amounted to Ch\$1,632 million.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 05 - SIGNIFICANT EVENTS, continued

Bond Issuances

On January 8, 2026, with settlement on January 15, 2026, the Bank issued a U.S. dollar-denominated bond in the amount of USD 500 million, maturing on November 20, 2030. The bond carries a coupon rate of 4.55% and was issued at a yield of 4.558%, representing a spread of 82 basis points over the five-year U.S. Treasury note. The bond was offered pursuant to Rule 144A and Regulation S under the U.S. Securities Act.

During 2026, the Bank registered bond issuances with the FMC totaling UF 6,562,000, Ch\$248,500 million and USD 530 million. Details of the bond issuances completed during the year are presented in Note 22

Additional provisions

At the Board meeting held on January 27, 2026, the release of additional provisions related to the commercial loan portfolio amounting to Ch\$18,000 million was approved.

At the Board meeting held on March 24, 2026, the release of additional provisions related to the commercial and mortgage loan portfolios amounting to Ch\$4,000 million and Ch\$1,000 million, respectively, was approved.

Basel III

In January 2026, the FMC reported that, as a result of the supervisory review process evaluating the business models of each banking institution, its Board resolved, in the case of Banco Santander, to maintain the capital charge already in place since June 2025 of 0.13%, representing a decrease from the previous requirement of 0.25%.

On March 30, 2026, the FMC announced that its Board approved the annual designation of domestic systemically important banks (D-SIBs) in Chile and the corresponding additional requirements, in accordance with the General Banking Law and Chapter 21-11 of the UCBR. Applying the established methodology, with the prior favorable agreement of the Central Bank of Chile, the same institutions as in the previous period retained their systemic designation. The FMC agreed to maintain the additional CET1 capital requirement equivalent to 1.5% of risk-weighted assets for Banco Santander-Chile. In consideration of the applicable phase-in schedule, the additional CET1 capital requirement arising from this concept must be fully constituted by December 2026.

On May 18, 2026, the Central Bank of Chile (BCCh) decided to continue the convergence of the Countercyclical Capital Buffer (CCyB) to its neutral level by setting it at 1.0% of risk-weighted assets over a 24-month implementation period.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 06 - REPORTING SEGMENTS

The Bank manages and measures the performance of its operations by business segments. Segment information is based on the internal management reporting system according to the segments established by the Bank.

Transactions between segments are conducted under normal commercial terms and conditions. The assets, liabilities and results of each segment include items directly attributable to the relevant segment, as well as those that can be allocated on a reasonable basis. A business segment comprises customers to whom a differentiated product offering is directed, but who are homogeneous in terms of performance and whose results are measured on a similar basis.

As of March 31, 2026, the Bank modified the identification of its operating segments in order to reflect changes in its internal management structure and in the manner in which the chief operating decision maker ("CODM") evaluates performance and allocates resources. Accordingly, comparative information has been restated for consistency with the presentation of the current period. Management believes that this new presentation provides more relevant information to users of the financial statements.

In order to achieve the strategic objectives established by senior management and adapt to changing market conditions, the Bank periodically makes adjustments to its organizational structure. These changes, in turn, impact to a greater or lesser extent the manner in which the Bank is managed and administered. Accordingly, this disclosure provides information on how the Bank is managed as of June 30, 2026.

The Bank is composed of the following business segments:

Retail & Commercial Banking

Retail

Retail represents the Bank's largest business line and focuses on individuals (retail customers) and SMEs. It includes individual customers from the high-, middle- and lower-income segments, as well as SMEs, small businesses and merchants (with annual net sales of up to approximately Ch\$4 billion). These segments are offered a broad range of products and services, including consumer loans, credit cards, mortgage loans, debit cards, checking accounts, savings products (mutual funds, brokerage services and time deposits) and insurance products. In addition, SME customers are offered government-guaranteed loans, leasing and factoring products. The vast majority of these customers are served through the Bank's branch network.

Commercial

Commercial includes legal entity customers corresponding to medium-sized companies (with annual sales above approximately Ch\$4 billion), as well as large corporations, real estate companies and institutions. This business area focuses on financing customers' economic activities through sophisticated services such as Cash Management, Trade Finance and Financial Advisory services, among others, offering a wide range of products including commercial loans in local and foreign currency, foreign trade financing, leasing, factoring, confirming services and corporate credit lines, among others.

Wealth Management & Insurance

This division comprises the Investment, Insurance and Private Banking businesses and is also responsible for coordinating the distribution of the Group's investment products and services across the other Santander Group divisions in Chile. Through Santander Insurance, the Bank offers a broad range of protection products for both individuals and businesses, including health, life, travel, savings, personal protection, motor vehicle and unemployment insurance, among others. The Private Banking business, operating under Santander Private Bank, serves high-net-worth clients and offers transactional products and services (including loans, credit cards, trade finance, and equity trading), as well as value-added services such as international investment accounts, structured funds, alternative investment funds, wealth management, and open-architecture investment solutions.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 06 - REPORTING SEGMENTS, continued

Corporate & Investment Banking (CIB)

This segment offers a broad range of products, including commercial loans, leasing, factoring, foreign trade financing, credit cards, checking accounts, transactional services, treasury services, financial advisory services, investment banking, savings products, mutual funds and insurance products for corporate clients and large financial institutions.

This business also includes the Treasury Division, which provides sophisticated financial products primarily to wholesale banking and corporate banking clients. These products include short-term funding and deposit products, brokerage services, derivatives and other tailor-made products designed to meet customers' needs. The Treasury area also manages position intermediation activities, as well as the Bank's proprietary investment portfolio.

Payments

Payments groups together digital payment solutions focused on merchant acquiring and transaction services through point-of-sale ("PoS") terminals. It provides global technological solutions for Banco Santander Chile and new clients in the open market. The principal local business included in this segment is Getnet.

Digital Consumer Bank

Digital Consumer Bank includes all consumer financing activities related to automotive and fleet financing. The principal business within this segment is the subsidiary Santander Consumer Finance.

The accounting policies of the segments are the same as those described in the summary of significant accounting policies and have been tailored to satisfy the Bank's management reporting needs. The Bank derives most of its revenues from net interest income, fee and commission income and results from financial transactions. The chief operating decision maker for each segment primarily uses net interest income, fee and commission income and provision expense to evaluate segment performance and make decisions regarding the allocation of resources to each segment.

(1) Loans receivable from clients at amortized cost plus the balance owed by banks.

(2) Loans receivable from clients at fair value through other comprehensive income.

(3) Includes deposits, demand liabilities, and other time deposits.

(4) Includes the sum of net income (loss) from financial operations and net foreign exchange gain (loss).

(5) Includes the sum of personnel salaries and expenses, administrative expenses, depreciation, amortization and impairment.

(6) Corresponds to the sum of other operating income and expenses, the result of non-current assets and groups that can be disposed of for sale not eligible as discontinued operations and profit or loss on investments in companies.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 07 - CASH AND CASH EQUIVALENTS

1. The details of the balances included under cash and deposits in banks is as follows:

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Cash and deposits in banks		
Cash	1,118,525	1,208,860
Deposits in the Central Bank of Chile	515,450	563,886
Deposits in foreign central banks	-	-
Deposits in domestic banks	4,548	2,482
Deposits foreign banks	256,689	200,416
Subtotal cash and deposits with banks	1,895,212	1,975,644
Cash items in collection process	123,599	117,417
Other cash equivalents	-	-
Total cash and cash equivalents	2,018,811	2,093,061

The level of funds in cash and at the Central Bank of Chile complies with regulations regarding reserve requirements and technical reserves that the Bank must maintain as an average over monthly periods, although these funds are immediately available.

2. Operations in the process of settlement

Cash items in the collection process are transactions in which only the settlement— that will increase or decrease the funds at the Central Bank or abroad – is pending. This process usually happens within the next 24 to 48 working hours following the transaction. These operations are presented as follows:

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Assets		
Documents held by other banks (document to be cleared)	92,947	96,821
Funds to be received	2,143,405	1,088,812
Subtotal	2,236,352	1,185,633
Liabilities		
Funds to be paid	2,112,753	1,068,216
Subtotal	2,112,753	1,068,216
Cash items in collection process	123,599	117,417

The Bank assessed those instruments with unrealized loss as of June 30, 2026, and December 31, 2025 and concluded they were not impaired. This review assessed the economic drivers of any decline, the securities' issuer credit ratings and the Bank's intention and ability to hold the securities until the unrealized loss is recovered. Based on this analysis, the Bank considers there are no significant or prolonged declines or changes in credit risks to cause impairment in its investment portfolio. Most of these instruments' fair value decline was caused by market conditions that the Bank considers temporary. All instruments with unrealized loss as of June 30, 2026, and December 31, 2025, were not in a continuous unrealized loss position for over one year.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 11 - FINANCIAL ASSETS AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME, continued

NOTE 12 - FINANCIAL DERIVATIVE CONTRACTS FOR HEDGE ACCOUNTING PURPOSES, continued**1. Micro-hedge accounting****Fair value micro-hedges**

The Bank uses cross-currency swaps, interest rate swaps, and call money swaps to cover its exposure to changes in the hedged item's fair value attributable to the interest rate. These hedging instruments change the effective cost of long-term issues from a fixed to a floating interest rate.

The following is a notional breakdown of hedged items and hedging instruments under fair value hedges, effective as of June 30, 2026, and December 31, 2025, separated by their term to maturity:

	As of June 30, 2026							Total
	On demand	Up to 1 month	Between 1 month and 3 months	Between 3 months and 1 year	Between 1 year and 3 years	Between 3 years and 5 years	More than 5 years

NOTE 12 - FINANCIAL DERIVATIVE CONTRACTS FOR HEDGE ACCOUNTING PURPOSES, continued**Cash flow micro-hedging**

The Bank uses cross-currency swaps to hedge the risk of the variability of cash flows attributable to changes in the interest rate of bonds and interbank loans issued at floating rates and to hedge foreign currency fluctuations, mainly in US dollars. In addition, it uses both forward and cross-currency swaps to hedge the inflation risk on certain items.

The following are the notional amounts of the hedged item as of June 30, 2026, and December 31, 2025, and the period in which the flows will occur:

	As of June 30, 2026							Total

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 12 - FINANCIAL DERIVATIVE CONTRACTS FOR HEDGE ACCOUNTING PURPOSES, continued**2. Effect on other comprehensive income**

The valuation generated by those hedging instruments used in cash flow hedges whose effect was recorded in the Interim Consolidated Statement of Change in Equity, specifically within 'Other Accumulated Comprehensive Income', in cash flow hedges, is presented as follows:

Hedged item	As of June 30,	As of December 31,
	2026	2025
	Ch\$mnn	Ch\$mnn
Interbank borrowing	(4,629)	(12,474)
Time deposits and other term equivalents	(2,711)	-
Issued debt instruments	(22,018)	(11,658)
Debt instruments at FVOCI	(148)	(597)
Loans and receivables at amortized cost	38,410	7,541
Total	8,904	(17,188)

Considering that the variable flows of both the hedged item and the hedging instrument are mirrors of each other, the hedges are close to 100% efficient. This entails that all variations in value attributable to components of the hedged risk are almost fully netted. During the period, the Bank did not record any forecasted future transactions within its cash flow hedge accounting portfolio.

3. Effect on results

The result generated by the cash flow derivatives whose effect was transferred from other comprehensive income into the results for the period is presented below:

Hedged item	As of June 30,	As of December 31,
	2026	2025
	Ch\$mnn	Ch\$mnn
Bond hedge derivatives	584	1,008
Interbank loans hedge derivatives	(426)	(2,811)
Loan hedge derivatives	(4,661)	(20,203)
Cash flow hedge net income(*)	(4,503)	(22,006)

(*) See Note 28 'Equity', letter f.

4. Net investment hedges in foreign operations

As of June 30, 2026, and December 31, 2025, the Bank does not have net investment hedges for foreign operations within its hedge accounting portfolio.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

Due after 2 to 3 years	1,102	1,229
Due after 3 to 4 years	993	1,089
Due after 4 to 5 years	406	890
Due after 5 years	2,617	2,888
Total	8,492	10,341

6. As of June 30, 2026, and December 31, 2025, the Bank has no financial lease contracts that cannot be unilaterally terminated.
7. The Bank has no restrictions on right of use assets as of June 30, 2026, and December 31, 2025. Additionally, no right of use assets have been pledged as collateral for the fulfillment of obligations. Furthermore, there are no amounts payable for right of use assets by the Bank as of the same dates.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 18 - CURRENT AND DEFERRED TAXES**1. Current taxes**

As of June 30, 2026, and December 31, 2025, the Bank has set up a first-category income tax provision based on the tax provisions in force. This provision is presented net of payments and credits as follows:

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Breakdown of current tax liabilities (assets)		
Current taxes (assets)	(1,867)	(113)
Current tax liabilities	52,385	83,084
Total net taxes payable (recoverable)	50,518	82,971
Details of current tax liabilities (assets) (net)		
Income tax (27%)	168,841	281,640
Minus:		
Monthly provisional payments	(117,492)	(191,232)
Credit for training expenses	(1,215)	(2,146)
Credits for donations	-	(1,262)
Other	384	(4,029)
Total taxes payable (recoverable)	50,518	82,971

2. Results from taxes

The tax expense presented in the Income Statement for the periods as of June 30, 2026, and December 31, 2025, is composed of the following items:

	For the period of 6 months until June 30,		For the quarter ended June 30,	
	2026 Ch\$mn	2025 Ch\$mn	2026 Ch\$mn	2025 Ch\$mn
Income tax expense				
Current year tax	154,196	117,338	155,370	58,549
Deferred tax credits (charges)				
Origination and reversal of temporary differences	3,227	21,469	(66,469)	27,627
Subtotal	157,423	138,807	88,901	86,176
Tax on rejected expenses Article N°21	176	270	38	99
Other	(42,547)	(36,460)	(29,796)	(36,455)
Net income tax expense	115,052	102,617	59,143	49,820

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 18 - CURRENT AND DEFERRED TAXES, continued**3. Reconciliation of the effective tax rate**

The reconciliation between the income tax rate and the effective tax rate applied in determining the tax expense as of June 30, 2026, and December 31, 2025, is shown below.

	For the period of 6 months until June 30,			
	2026		2025	
	Tax Rate	Amount	Tax Rate	Amount
	%	Ch\$m	%	Ch\$m
Tax calculated on the profit before taxes	27.00	212,585	27.00	178,516
Permanent differences (*)	(12.79)	(100,693)	(11.38)	(75,274)
Single tax (disallowed expenditure)	0.02	176	0.04	270
Other	0.38	2,984	(0.14)	(895)
Effective rate and income tax expense	14.61	115,052	15.52	102,617

(*) Corresponds mainly to permanent differences arising from the Price-Level Restatement of Equity in tax books and the result from the sale of bonds under Article 104 of the Income Tax Law (LIR).

	For the quarter ended June 30,			
	2026		2025	
	Tax Rate	Amount	Tax Rate	Amount
	%	Ch\$m	%	Ch\$m
Tax calculated on the profit before taxes	27.00	121,761	27.00	88,190
Permanent differences (*)	(5.17)	(75,073)	0.71	(33,349)
Single tax (disallowed expenditure)	(0.02)	38	(0.02)	99
Other	3.18	12,417	(1.47)	(5,120)
Effective rate and income tax expense	24.99	59,143	26.22	49,820

(*) Corresponds mainly to permanent differences arising from the Price-Level Restatement of Equity in tax books and the result from the sale of bonds under Article 104 of the Income Tax Law (LIR).

4. Effect of deferred taxes on equity

The following is a summary of the effect of deferred tax on equity, separately showing the balances corresponding to assets and liabilities for the periods ending June 30, 2026, and December 31, 2025:

	As of June 30,	As of December 31,
	2026	2025
	Ch\$m	Ch\$m
Deferred tax assets (OCI)		
Financial investment instruments	36,688	22,360
Cash flow hedges	—	4,640
Total deferred tax assets with effect in others comprehensive income	36,688	27,000
Deferred tax liabilities		
Financial investment instruments	(1,646)	(1,325)
Cash flow hedges	(2,404)	-
Total deferred tax liabilities with effect on others comprehensive income	(4,050)	(1,325)
Net deferred tax balances in equity	32,638	25,675
Deferred taxes in equity attributable to equity holders of the bank	33,432	26,327
Deferred tax in equity attributable to non-controlling interests	(794)	(652)

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 18 - CURRENT AND DEFERRED TAXES, continued**5. Effect of deferred taxes on income**

As of June 30, 2026, and December 31, 2025, the Bank has recorded the effects of deferred taxes in its Interim Consolidated Financial Statements.

Below are the effects of deferred taxes on assets, liabilities and results allocated due to temporary differences:

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Deferred tax assets		
Interest and readjustments	26,428	22,583
Extraordinary charge-off	27,765	22,170
Assets received in lieu of payment	10,948	9,437
Valuation of fixed assets	1,950	8,552
Foreign exchange adjustments	-	-
Provision for loan losses	343,435	345,551
Provision for expenses	85,037	92,952
Derivatives	-	-
Leased assets	60,655	74,960
Subsidiaries tax loss	-	-
Right-of-use assets	13,167	10,975
Other	-	1,262
Total deferred tax assets	569,385	588,442
Deferred tax liabilities		
Valuation of investments	(828)	(533)
Anticipated expenses	(24,779)	(28,206)
Derivatives	(62,294)	(75,378)
Lease obligations	(10,271)	(8,519)
Foreign exchange adjustments	(28)	(1,900)
Other	(15,349)	(14,843)
Total deferred tax liabilities	(113,549)	(129,379)

6. Breakdown of deferred taxes

Below is a breakdown of deferred taxes, considering their effect on equity and results

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Deferred tax assets		
With an effect on other comprehensive income	36,688	27,000
With an effect on income	569,385	588,442
Total deferred tax assets	606,073	615,442
Deferred tax liabilities		
With an effect on other comprehensive income	(4,050)	(1,325)
With an effect on income	(113,549)	(129,379)
Total deferred tax liabilities	(117,599)	(130,704)

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 18 - CURRENT AND DEFERRED TAXES, continued**7. Presentation of taxes in the financial statements**

At the date of these Interim Consolidated Financial Statements, taxes are presented as follows:

Deferred taxes	As of June 30, 2026	As of December 31, 2025
	Ch\$mn	Ch\$mn
Deferred tax assets before reclassifying	606,073	615,442

Charge-offs under paragraph IV	(2,616)	(3,457)
Total	(2,616)	(3,457)

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 19 - OTHER ASSETS

The composition of the item "Other Assets" as of June 30, 2026, and December 31, 2025, is as follows:

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Other assets		
Assets to be leased out as lessor (1)	13,333	9,366
Cash guarantees provided for derivative financial transactions (2)	1,595,160	2,075,671
Debtors by financial instrument intermediation	58,371	83,086
Accounts receivable from third parties	185,150	99,436
VAT tax credit receivable	15,105	15,009
Pre-paid expenses (3)	47,434	24,400
Valuation adjustments for macro hedges (4)	103,151	119,790
Assets backing obligations of defined benefit pension plans	847	693
Investments in gold	1,562	1,619
Other cash guarantees provided (5)	22,129	26,637
Pending operations	6,104	16,657
Other assets	91,872	171,680
Total	2,140,218	2,644,044

1. These correspond to assets available to be delivered under financial leasing arrangements.
2. These are guarantees associated with certain derivative contracts. These guarantees are triggered when the valuation of derivatives exceeds thresholds defined in the respective contracts and may work in favor of or against the Bank.
3. This category includes prepaid expenses related to the Santander LATAM Pass program. These expenses will naturally be consumed as customers use the Bank's transactional products, leading to the assignment of the respective LATAM Pass miles (a loyalty program managed by LATAM Airlines Group S.A.).
4. This corresponds to the balances of market value valuation of net assets or liabilities subject to macro hedging (Note No. 12).
5. These are cash guarantees with the clearinghouse for low-value payments, which came into effect starting in 2024.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 20 - NON-CURRENT ASSETS AND DISPOSAL GROUPS HELD FOR SALE AND LIABILITIES INCLUDED IN DISPOSAL GROUPS HELD FOR SALE

The composition of the item "non-current assets and disposal group held for sale" and "liabilities included in disposal groups held for sale" as of June 30, 2026, and December 31, 2025, is as follows:

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Assets received in payment or awarded in a judicial auction (1)		
Assets received in lieu of payment	10,362	13,993
Assets awarded in a judicial auction	43,126	40,283
Provisions for assets received in lieu of payment or awarded in a judicial auction	(3,463)	(3,373)
Non-current assets held for sale		
Fixed assets	28,865	29,003
Assets from the recovery of goods sold under financial leasing operations	1,118	1,693
Disposable groups for sale	-	-
Total	80,008	81,599

- (1) Assets received in payment are those received in place of overdue debts from customers. The aggregate assets held in this way must not exceed 20% of the Bank's regulatory capital. Currently, these assets represent 0.14% (0.20% as of December 31, 2025) of the Bank's regulatory capital. Assets awarded in a judicial auction correspond to those awarded in judicial auctions as repayment of debts previously contracted with the Bank. Assets awarded in a judicial auction are not subject to the aforementioned margin. These immovable properties are assets available for sale. For most assets, the sale is expected to be completed within one year from the asset's reception or acquisition. If such property is not sold within the time frame established in bank regulations, it must be written off. Furthermore, a provision is recorded for the difference between the higher initial award value plus any additions and its appraisal value.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 21 - FINANCIAL LIABILITIES HELD FOR TRADING AT FAIR VALUE THROUGH PROFIT OR LOSS

Financial liabilities at fair value through profit or loss comprise the liabilities held for trading. They are classified in this category because they are acquired to sell in the short term.

Financial liabilities held for trading and derivatives that are financial liabilities are measured at fair value, in which gains and losses are taken to the income statement.

As of June 30, 2026, and December 31, 2025, the Bank holds the following portfolio of financial liabilities held for trading at fair value through profit or loss:

Fair value - Liabilities	As of June 30,	As of December 31,
	2026 Ch\$m	2025 Ch\$m
Financial derivatives contracts		
Forwards	1,335,015	2,173,004

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 27 - OTHER LIABILITIES

The composition of the item 'other liabilities' as of June 30, 2026, and December 31, 2025, is as follows:

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Other liabilities		
Cash guarantees received for financial derivative transactions (1)	1,539,079	1,541,061
Creditors for intermediation of financial instruments	62,656	100,035
Accounts payable to third parties	487,419	449,232
Valuation adjustments for macro-hedges (2)	56,269	51,690
Revenue liabilities due to income from ordinary activities generated by contracts with customers	7,715	6,473
VAT tax debit payable	24,354	28,639
Pending operations	12,518	19,856
Insurance collections pending settlement	-	9,582
Other liabilities	64,343	41,438
Total	2,254,353	2,248,006

(1) Corresponds to guarantees related to certain derivative contracts (threshold transactions). These guarantees operate when the valuation of derivatives exceeds thresholds defined in the respective contracts and may be in favor of or against the Bank.

(2) Correspond to the balances of the mark-to-market valuation of net assets or liabilities hedged in a macro-hedge (Note 12).

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 28 - EQUITY**1. Equity and preferred shares**

As of June 30, 2026, and December 31, 2025, the Bank has a share capital of Ch\$891,303 million comprising 188,446,126,794 authorized shares, which are subscribed and paid in full. All these are ordinary shares with no par value and no preferences. Accordingly, share movements as of June 30, 2026, and December 31, 2025, are as follows:

	Shares	
	As of June 30,	As of December 31,
	2026	2025
Issued as of January 1,	188,446,126,794	188,446,126,794
Issuance of paid shares	-	-
Issuance of shares owed	-	-
Exercised stock option	-	-
Total shares	188,446,126,794	188,446,126,794

As of June 30, 2026, and December 31, 2025, the Bank does not hold any of its own shares, nor do the companies that are consolidated by the Bank.

As of June 30, 2026, the shareholders' ownership distribution is as follows:

Company name or Shareholder name	Shares	ADRs (*)	Total	% Of equity holding

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 28 - EQUITY, continued**2. Reserves**

At the Ordinary Shareholders' Meeting of Banco Santander-Chile held on April 28, 2026, an increase in the Bank's reserves of Ch\$391,380 million was approved. As of June 30, 2026, and December 31, 2025, the balance of reserves amounted to Ch\$3,877,287 million and Ch\$3,459,800 million, respectively.

3. Dividends

The breakdown of the dividend distribution is presented within the Interim Consolidated Statement of Change in Equity. The provision for the payment of common stock dividends as of June 30, 2026, and December 31, 2025, amounted to Ch\$393,455 million and Ch\$631,925 million, respectively.

4. As of June 30, 2026, and 2025, the composition of diluted profit and basic profit is as follows:

	As of June 30,	
	2026 Ch\$mn	2025 Ch\$mn
A. Basic earnings per share		
Profit attributable to equity holders	655,759	550,355
Weighted average number of outstanding shares	188,446,126,794	188,446,126,794
Basic earnings per share (in Ch\$)	3.48	2.92
Diluted earnings per share from continuing operations (in Ch\$)	3.48	2.92
B. Diluted earnings per share		
Profit attributable to equity holders	655,759	550,355
Weighted average number of outstanding shares	188,446,126,794	188,446,126,794
Assumed conversion of convertible debt	-	-
Adjusted number of shares	188,446,126,794	188,446,126,794
Basic earnings per share (in Ch\$)	3.48	2.92
Diluted earnings per share from continuing operations (in Ch\$)	3.48	2.92

The Bank does not hold any dilutive instruments as of June 30, 2026, and 2025.

5. Provision for interest payments on perpetual bonds

The Bank records in equity the accrual of interest on perpetual bonds under "Provisions for dividends, interest payments and revaluation of issued regulatory capital instruments." As of June 30, 2026, and December 31, 2025, the balance amounted to Ch\$5,301 million and Ch\$5,265 million, respectively. For further information, see Note No. 25.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 28 - EQUITY, continued

6. Other comprehensive income from investment instruments and cash flow hedges:

	As of June 30, 2026 Ch\$mn	As of December 31, 2025 Ch\$mn
Investment instruments		
Balance as of January 1,	(77,905)	(67,161)
Gain (loss) on valuation adjustment of Investment Financial Instruments portfolio before taxes	(54,899)	(8,417)
Reclassifying and adjustment of the portfolio of Financial Investment Instruments	-	-
Net realized profit	3,020	(2,327)
Subtotal	(51,879)	(10,744)
Total	(129,784)	(77,905)
Cash flow hedging		
Balance as of January 1,	(17,188)	(77,801)
Gain (loss) on valuation adjustment of cash flow hedges before taxes	30,595	82,619
Reclassifying and adjustments for cash flow hedges before taxes	(4,503)	(22,006)
Amount reclassified from equity included as the book value of non-financial assets and liabilities. Its acquisition or disposal was hedged as a highly probable transition.	-	-
Subtotal	26,092	60,613
Total	8,904	(17,188)
Other comprehensive income before taxes	(120,880)	(95,093)
Income tax related to other comprehensive income components		
Income tax relating to portfolio of financial investment instruments	35,042	21,035
Income tax relating to cash flow hedges	(2,404)	4,640

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 29 - CONTINGENCIES AND COMMITMENTS**1. Lawsuits and legal procedures**

As of the date of issuance of these Interim Consolidated Financial Statements, several lawsuits have been filed against the Bank and its affiliates concerning business operations. As of June 30, 2026, the Bank has provisions for this concept, which amount to Ch\$4,612 million (Ch\$3,933 million as of December 31, 2025), which are included in the Interim Consolidated Statements of Financial Position under the heading "Provisions for contingencies." For more information, see Note No. 24.

Banco Santander

In order to cover the amounts related to legal proceedings in which first- and second-instance rulings have been unfavorable to Banco Santander's interests, or for possible alternative resolutions to such cases, the Bank has recognized provisions amounting to Ch\$4,410 million and Ch\$3,758 million as of June 30, 2026, and December 31, 2025, respectively. It is important to note that these amounts have been estimated based on quantitative information from first-instance rulings unfavorable to the Bank, as well as qualitative information related to the proceedings, which includes, among other things, expert opinions on the case, recommendations from the defense attorneys, and experience drawn from judicial rulings in similar cases (jurisprudence) issued by various courts.

Santander Corredores de Bolsa Limitada

Lawsuit 'Echeverría vs Santander Corredora de Bolsa' (currently Santander Corredores de Bolsa Ltda), filed before the 21st Civil Court of Santiago, Role C- 12.366-2014, regarding compensation for damages due to failures in the purchase of shares, the amount of the claim is Ch\$60 million. As of June 30, 2026, the case is pending reopening of the proceedings and resolution of the motion for abandonment of proceedings filed by the brokerage firm.

Lawsuit 'Chilena de Computación vs Banco Santander and Santander Corredores de Bolsa' filed before the 3rd Civil Court of Santiago, Role C-12325-2020. As of June 30, 2026, the lawsuit is in the current discussion stage, the documents requested by the Court have been exhibited, and possible actions by the petitioners are pending.

Santander Corredora de Seguros Limitada

Existing lawsuits amount to UF 16,109, which mainly relate to assets under leasing. Our lawyers have not estimated any material losses from these lawsuits.

Santander Consumer Finance Limitada

Currently, there are 69 lawsuits corresponding to processes mainly related to clients. Our lawyers have not estimated any material losses from these lawsuits.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

Total	38,822,976	36,422,094

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 29 - CONTINGENCIES AND COMMITMENTS, continued**4. Guarantees**

Banco Santander-Chile has a comprehensive bankers' blanket bond insurance policy covering Employee Dishonesty, Policy No. 0618770, in force with Zurich Chile Seguros Generales S.A., providing coverage of US\$45,000,000 per claim, subject to an annual aggregate limit of US\$90,000,000. The policy jointly covers both the Bank and its subsidiaries and expires on June 30, 2027.

Santander Corredores de Bolsa Limitada

As of June 30, 2026, the Company maintains guarantees deposited with the Santiago Stock Exchange to cover simultaneous transactions carried out with its own portfolio, totaling Ch\$9,826 million (Ch\$9,633 million as of December 31, 2025).

As of June 30, 2026, the Company does not maintain guarantees posted with the Chilean Commodities Exchange.

Additionally, as of June 30, 2026, the Company maintains a guarantee with CCLV Contraparte Central S.A., in fixed-income securities, amounting to Ch\$10,206 million (Ch\$10,207 million as of December 31, 2025).

To ensure full and proper compliance with all its obligations as a Stockbroker, in accordance with Articles 30 and following of Law No. 18,045 on the Securities Market, the Company has delivered fixed-income securities to the Santiago Stock Exchange with a present value of Ch\$1,012 million as of June 30, 2026 (Ch\$1,001 million as of December 31, 2025). This corresponds to a time deposit with Banco Santander, maturing on December 1, 2026.

As of June 30, 2026, the Company holds a guarantee for securities lending in the amount of Ch\$8,824 million (Ch\$8,632 million as of December 31, 2025).

As of June 30, 2026, the Company has a guarantee bond N° B288937 issued by Banco Santander Chile, in compliance with General Rule No. 120 of the FMC, with respect to placement, transfer and redemption activities of Morgan Stanley funds, in the amount of US\$ 300,000. This bond covers participants acquiring shares of the Morgan Stanley Sicav foreign open-end funds and matures on July 20, 2027.

Santander Corredora de Seguros Limitada

In accordance with Circular No. 1,160 issued by the FMC, the Company maintains an insurance policy to ensure the proper and complete fulfillment of all obligations arising from its operations as an insurance brokerage intermediary.

The Insurance Brokers' Guarantee Policy No. 6943060, which provides coverage of UF 500, and Insurance Brokers' Professional Liability Policy No. 6943059, for an amount equivalent to UF 60,000, were contracted with Compañía de Seguros Generales Consorcio Nacional de Seguros S.A. Both policies are effective from April 15, 2026 through April 14, 2027.

The Company maintains bank guarantees to secure the due performance of the terms and conditions of the public tender for fire and earthquake insurance covering the residential mortgage portfolio and for professional services provided to the Bank, in the amounts of UF 500 and UF 10,000, respectively, with the same financial institution. Both bank guarantees expire on December 31, 2026.

The Company maintains a bank guarantee with Banco Santander-Chile to secure the due performance of the terms and conditions of the public tender for credit life insurance covering the residential mortgage portfolio and professional services provided to Banco Santander. The bank guarantee amounts to UF 10,000 and expires on October 30, 2027.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

(*) This corresponds to a formal restructuring plan consistent with the provisions of IAS 37. This restructuring plan is part of the Bank's transformation process aimed at building a digital bank with branches. It has involved a transformation of the branch model and the operating model, along with a transition toward a common global structure (Go To Model).

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 37 - EXPENSES FROM OBLIGATIONS TO EMPLOYEES

The expenses from obligations to employees as of June 30, 2026, and 2025, are as follows:

	For the six-month period June 30,		For the quarter ended June 30,	
	2026	2025	2026	2025
	Ch\$m	Ch\$m	Ch\$m	Ch\$m
Employee benefits (short-term)	(184,885)	(184,663)	(99,455)	(101,589)
Employee benefits (long-term)	(8,655)	(6,730)	(4,698)	(3,374)
Expenses of employment benefits related to contract terminations	(11,501)	(9,872)	(4,260)	(5,361)
Expenses for defined benefit post-employment plan obligations	(564)	(647)	(319)	(442)
Other human resources costs	(3,623)	(3,894)	(1,647)	(977)
Total	(209,228)	(205,806)	(110,379)	(111,743)

Share-based compensation (settled in cash)

The Bank provides certain executives of the Bank and its affiliates a share-based payment benefit, which is settled in cash according to the requirements of IFRS 2. Accordingly, the Bank measures services received, and liabilities incurred at fair value.

Until settlement of the liability, the Bank determines the liability's fair value at the end of each reporting period and on the settlement date, with any fair value changes recognized in the period results.

Pension plan

The Bank has an additional benefit available to its senior executives, consisting of a pension plan with funds to provide for a better complementary pension upon retirement.

In this respect, the Bank will complement the voluntary contributions made by beneficiaries for their future pension with an equal contribution. Executives shall earn the right to receive this benefit only if they meet the following concurrent conditions:

- Aimed at the Group's senior management.
- The general requirement for eligibility is to be still employed when they are 60 years old.
- The Bank will contract a mixed collective insurance policy (life and savings) for each executive, with the contracting party and beneficiary being the Group company to which the executive belongs.

In the event of termination of the employment relationship between the executive and the respective company before meeting the conditions described above, no entitlement shall accrue to them under this benefit plan.

Exceptionally, in the event of the manager's death or their total or partial disability, the manager or their heirs shall be entitled to receive this benefit as the case may be.

The Bank will contribute to this benefit plan based on mixed group insurance policies, the beneficiary of which is the Bank. The life insurance company with which these policies are contracted is unrelated to the Bank or any other Group company.

The Bank's entitlements under the plan as of June 30, 2026, and December 31, 2025 amounted to Ch\$4,180 million and Ch\$3,462 million, respectively.

The Bank has quantified the amounts of the defined benefit obligations based on the following criteria:

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 37 - EXPENSES FROM OBLIGATIONS TO EMPLOYEES, continued**Calculation method:**

The projected unit credit method is used, which considers each year of service as generating an additional unit of benefit entitlement and values each unit separately. It is calculated according to the fund contribution that considers as the main parameters the factors related to the legal annual pension ceiling, the years of service, age and annual income of each unit valued individually.

Actuarial assumptions used:

Actuarial assumptions regarding demographic and financial variables are unbiased and mutually compatible. The most significant actuarial assumptions considered in the calculations were:

The assets related to the savings fund contributed by the Bank to Compañía de Seguros Zurich, for defined benefit plans, are presented net of the associated obligations. The assumptions used correspond to:

Post-Employment Plans	As of June 30,	As of December 31,
	2026	2025
Mortality chart	RV-2014	RV-2014
Termination of contract rate	5.0%	5.0%

NOTE 42 - RESULTS FROM DISCONTINUED OPERATIONS

The Bank currently has no results from discontinued operations.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 43 - TRANSACTION WITH RELATED PARTIES

The Bank's "related parties" include, in addition to its subsidiaries and associates, "key personnel" of the Bank's Management (members of the Bank's Board of Directors and Managers of Banco Santander-Chile and its affiliates, along with their close relatives), as well as entities over which key personnel may exercise significant influence or control.

Additionally, the Bank has considered the various companies that form part of the Santander Group worldwide as related parties, with the understanding that they all have a common parent company, namely Banco Santander S.A. (based in Spain).

Article 89 of the Chilean Corporation Law, which also applies to banks, establishes that any transaction with a related party must be carried out under fair conditions, similar to those normally prevailing in the market.

Furthermore, Article 84 of the General Banking Law establishes limits loans that may be granted to related parties and prohibits granting loans to the Bank's directors, general manager, or general representatives.

The Bank's transactions with its related parties are listed below. For ease of understanding, we have divided the information into four categories:

Santander Group Companies

This category includes all companies belonging to the Santander Group worldwide, and therefore also includes those companies over which the Bank exercises some degree of control (subsidiary and special-purpose entities).

Associated Companies

This category includes those entities where the Bank, as indicated in Note 01 b) of these Consolidated Financial Statements, exercises some degree of significant influence over them. These entities, in general, correspond to the so-called "business support companies."

Key Personnel

This category includes members of the Bank's Board of Directors and executives of Banco Santander-Chile and its affiliates, along with their close relatives. It takes into account the limitations imposed by Chapter 12-12 of the UCBR.

Other

This category includes related parties not included in the groups described above and, in general, those entities over which key personnel may exercise significant influence or control.

The terms of transactions with related parties are equivalent to those found in arm's-length transactions, or the corresponding in-kind compensation has been allocated.

Directors	11	11
Managers	115	124
Total	126	135

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 44 - FAIR VALUE OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal (or most advantageous) market at the measurement date under current market conditions (i.e., an exit price), regardless of whether that price is directly observable or estimated using another valuation technique. Fair value measurement assumes that the sale of the asset or transfer of the liability occurs in the principal market for the asset or liability or in the most advantageous market for the asset or liability.

For financial instruments without available market prices, fair values have been estimated using recent transactions in similar instruments or, if not possible, current values or other valuation techniques based on mathematical valuation models sufficiently tested by the international financial community. When using these models, the specific characteristics of the asset or liability being valued are taken into account, and in particular, the different types of risks associated with the asset or liability.

These techniques are inherently subjective and significantly affected by the assumptions used, including the discount rate, estimates of future cash flows, and prepayment assumptions. Therefore, estimated fair value of an asset or liability not exactly matching the price at which the asset or liability could be delivered or settled at the valuation date and may not be justified by comparison with independent markets.

Determination of the fair value of financial instruments

The following table shows a comparison between the book value of the Bank's financial assets and liabilities and their corresponding fair values as of June 30, 2026, and December 31, 2025:

	As of June 30, 2026		As of December 31, 2025	
	Book value	Fair value	Book value	Fair value
	Ch\$mn	Ch\$mn	Ch\$mn	Ch\$mn
Assets				
Financial assets held for trading at fair value through profit or loss	11,100,132	11,100,132	11,594,405	11,594,405

Guarantees received for financial derivative transactions	1,539,079	1,539,079	1,541,061	1,541,061

NOTE 44 - FAIR VALUE OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES, continued

Fair value approximates carrying amount in the following items, due to their short-term nature, in the case of: cash, bank deposits, and transactions in the process of settlement. Additionally, the fair value estimates presented above do not attempt to quantify the value of the Bank's earnings generated by its business or future activities, and therefore do not represent the value of the Bank as a going concern. Below is a description of the methods used to estimate the fair value of financial instruments.

1. Debt financial instruments

The estimated fair value of these financial instruments was established using market values or estimates from a readily available dealer or quoted market prices for similar financial instruments. The investments are valued at book (as recorded) value because they are not considered to have a fair value significantly different from their recorded value. Additional variables and elements (where applicable) were considered in estimating the fair value of debt investments, including estimates of prepayment rates and the issuers' credit risk.

2. Loans and receivables from clients and Interbank loans

The fair value of commercial loans, mortgage loans, credit cards, and consumer loans is measured using discounted cash flow analysis. For this purposes, prevailing market interest rates are used, taking into account the product, term, amount, and similar credit quality. The fair value of loans with a past due period of 90 days or more is measured using the market value of the associated collateral, discounted at the rate and expected maturity.

For variable-rate loans with frequently changing interest rates (monthly or quarterly) and not subject to significant credit risk, the estimated fair value is based on their carrying amount. The carrying amounts and fair values are presented net of provisions for credit risk.

3. Deposit and other demand obligations

The disclosed fair value of non-interest-bearing deposits and savings accounts is the amount payable at the reporting date and, therefore, equals the recorded amount. The fair value of time deposits is calculated using the discounted cash flow method, which applies current interest rates currently offered to a schedule of monthly maturities expected in the market.

4. Short- and long-term debt instruments issued

The fair value of these financial instruments is calculated using discounted cash flow analysis based on current incremental borrowing rates for similar types of loan agreements with similar maturities.

5. Financial derivatives and accounting hedging contracts

The estimated fair value of the foreign exchange forward contracts was calculated using quoted market prices for financial instruments with similar characteristics.

The fair value of interest rate swaps represents the estimated amount that the Bank determines as the exit price in accordance with IFRS 13. If there are no quoted market prices (direct or indirect) for any derivative instrument, the respective fair value estimates have been calculated using valuation models and techniques such as Black-Scholes, Hull and Monte Carlo simulations and considering relevant inputs such as option volatility, observable correlations between underlying assets, counterparty credit risk, implied price volatility, speed with which volatility reverts to its mean value, linear relationship (correlation) between the value of a variable.

Fair value measurement and hierarchy

IFRS 13, "Fair Value Measurement," establishes a fair value hierarchy that segregates the inputs and/or assumptions of valuation techniques used to measure the fair value of financial instruments. The hierarchy gives highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and lowest priority to measurements that involve significant unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy are as follows:

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 44 - FAIR VALUE OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES, continued

- Level 1: Inputs are quoted (unadjusted) prices in active markets for identical assets and liabilities for which the Bank has access at the measurement date.
- Level 2: Inputs other than quoted prices included in Level 1 that are observable for assets or liabilities, directly or indirectly.
- Level 3: Unobservable inputs for the asset or liability.

The estimated fair value of the foreign exchange forward contracts was calculated using quoted market prices for financial instruments with similar characteristics.

The fair value of interest rate swaps represents the estimated amount the Bank expects to receive or pay to terminate the contracts or agreements, taking into account the term structures of the interest rate curve, volatility of the underlying asset, and the credit risk of the counterparties.

In cases where quotations cannot be observed, management makes its best estimate of the market price using its own internal models, which, in most cases, use data based on observable market parameters as significant inputs (Level 2) and, in limited cases, use significant inputs that are not observable in market data (Level 3). Various techniques are used to arrive at this estimate, including extrapolation of observable market data.

Financial instruments at fair value and determined by published quotes in active markets (Level 1) include:

- Instruments of the Chilean Central Bank and the General Treasury of the Republic.
- Foreign instruments issued.
- Mutual funds.

If the instruments are not 100% market-observable, however, the price is a function of other prices that are market-observable (Level 2). The following financial instruments are classified as Level 2:

Type of financial instrument	Valuation model used	Description
Private bonds	Present value of cash flows	Internal rates of return ("IRRs") are provided by independent pricing source service entity according to the following criterion: On the valuation day, if there are one or more valid transactions in the Santiago Stock Exchange for a given mnemonic code, the reported rate is the weighted average of said rates. If there are no valid transactions for a given mnemonic data on the valuation day, the reported rate is an 'IRR baseline' from a reference structure plus a 'Model Spread' based on information from historical spreads of the same or similar documents.
Time deposits	Present value of cash flows	Internal rates of return ("IRRs") are provided by independent pricing source service entity according to the following criterion: On the valuation day, if there are one or more valid transactions in the Santiago Stock Exchange for a given mnemonic code, the reported rate is the weighted average of said rates. If there are no valid transactions for a given mnemonic code on the valuation day, the reported rate is an 'IRR baseline' from a reference structure plus a 'Model Spread' based on the 'Issuer curves'.
Constant Maturity Swap (CMS), Forward FX and Inflation, Cross Currency Swap (CCS), Interest Rate Swap (IRS)	Present value of cash flows	Rates (IRR) are provided by ICAP, GFI, Tradition and Bloomberg according to the following criteria: The published market prices are used to construct the valuation curve using the bootstrapping method, and then this curve is used to value the various derivatives.
FX Options	Black-Scholes	Formula adjusted by the volatility smile (implied volatility). BGC Partners provide prices (volatilities) according to the following criteria: The volatility surface is built through interpolation using published market prices, and these volatilities are then used to value the options.
Guarantees for threshold transactions, guarantee deposits	Present value of cash flows	Transactions related to derivatives contracts such as Constant Maturity Swap (CMS), Forward FX and Inflation, Cross Currency Swap (CCS), Interest Rate Swap (IRS) and FX Options.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 44 - FAIR VALUE OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES, continued

In limited cases, unobservable inputs are used in market data (Level 3). Various techniques are used to perform this estimation, including extrapolation of observable market data or a mix of observable data.

The following financial instruments are classified as Level 3:

Type of financial instrument	Valuation model used	Description
Caps/Floors/Swaptions	Black Normal model for Cap/Floors and Swaptions	There is no observable input of implied volatility.
	Black-Scholes	There is no observable input of implied volatility.
	Hull-White	Hybrid HW model for rates and Brownian motion for FX. There is no observable input of implied volatility.
	Implicit Forward Rate Agreement (FRA)	Start Fwd unsupported by Murex (platform) due to the UF forward estimate.
CCS, IRS, CMS in Active Bank Rate (TAB)	Present value of cash flows	Valuation obtained using yield curve interpolating to maturity of flows. Nevertheless, TAB is not a directly observable variable nor correlated to any market input.
	Present value of cash flows	Valuation using prices of instruments with similar characteristics, plus a liquidity discount rate.
CCS (maturities over 30 years)	Present value of cash flows	Rates (IRR) are provided by ICAP, GFI, Tradition and Bloomberg according to the following criteria: The published market prices are used to construct the valuation curve using the bootstrapping method and then this curve is used to value the various derivatives.
Receivables accounts valued at fair value	Present value of cash flows	Measured by discounting the estimated cash flow using the interest rate of the new contracts.
Mortgage bonds	Present value of cash flows	The rates (IRR) are provided by RiskAmérica according to the following criteria: If on the valuation date there is one or more valid transactions on the Santiago Stock Exchange for a specific security code, the reported rate is the weighted average (by amount) of the observed rates. If there are no valid transactions for a given security code on the valuation date, the reported rate is a "base IRR" derived from a reference curve, plus a "Model Spread" based on historical spread data for the same instrument or similar ones.

The Bank estimates that any changes in unobservable criteria for instruments classified at Level 3 would not result in significant differences in the fair value measurement.

The following table presents the assets and liabilities that are measured at fair value on a recurring basis:

As of June 30,	Fair value measurements			
	2026 Ch\$mnn	Level 1 Ch\$mnn	Level 2 Ch\$mnn	Level 3 Ch\$mnn

Total	47,809,603	-	33,509,692	14,299,911

The fair value of other assets and liabilities approximates their carrying amounts.

The methods and assumptions for estimating fair value are defined below:

- Loans and amounts owed by credit institutions and customers: Fair value is estimated for groups of loans with similar characteristics. Fair value was measured by discounting the estimated cash flow using the new contract interest rate. First, the future cash flow of the current loan portfolio is estimated using contractual rates, and then the new loans distributed at the risk-free interest rate are incorporated into the (risk-free) yield curve to calculate the loan portfolio at fair value.

Regarding behavioral assumptions, it is important to emphasize that a prepayment rate is applied to the loan portfolio, thus providing a more realistic future cash flow:

- Deposits and liabilities with banks: The fair value of deposits was calculated by discounting the difference between cash flows on a contractual basis and current market rates for instruments with similar maturities. For variable-rate deposits, the carrying amount was considered to approximate fair value.
- Debt instruments issued and other financial obligations: The fair value of long-term loans was estimated using discounted cash flows at the market interest rate with similar terms and maturities.

The valuation techniques used to estimate each level are defined in Note 2. There were no transfers between Levels 1 and 2 as of June 30, 2026, and December 31, 2025.

The following table presents the Bank's activity for assets and liabilities measured at fair value on a recurring basis using significant unobserved inputs (Level 3) as of June 30, 2026, and December 31, 2025:

	Assets Ch\$mn	Liabilities Ch\$mn
Balance as of January 1, 2026	299,861	-
Total realized and unrealized profit (loss)		
Included in profits	-	-
Included in comprehensive income	(58,288)	-
Acquisitions, sales, issuances and liquidations (net)	213,803	-
Level transfers	(2,805)	-
As of June 30, 2026	452,571	-
Total profit or loss included in profit or loss as of June 30, 2026 attributable to the change in unrealized profit (loss) relating to assets or liabilities as of December 31, 2025	152,710	-

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 44 - FAIR VALUE OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES, continued

	Assets	Liabilities
	Ch\$mnn	Ch\$mnn
Balance as of January 1, 2025	85,517	3
Total realized and unrealized profit (loss)		
Included in profit	-	-
Included in comprehensive income	(34,911)	-
Acquisitions, sales, issuances and liquidations (net)	240,980	-
Level transfers	8,275	(3)
As of December 31, 2025	299,861	-
Total profit or loss included in profit or loss as of December 31, 2025 attributable to the change in unrealized profit (loss) relating to assets or liabilities as of December 31, 2024	214,344	(3)

The internal Local Risk Factor Committee, which meets quarterly, reviews the cases in which transfers between different levels are required. During 2026, the Bank did not reclassify instruments between levels.

Realized and unrealized gains (losses) included in income as of June 30, 2026, and December 31, 2025 arising from assets and liabilities measured at fair value on a recurring basis through significant unobservable inputs (Level 3), are recorded in the Interim Consolidated Statements of Income under the caption "Net income from financial operations."

The potential effect as of June 30, 2026, and December 31, 2025, on the valuation of assets and liabilities measured at fair value on a recurring basis through significant unobservable inputs (Level 3) that would result from a change in the main assumptions in the case of using other reasonably possible assumptions less or more favorable than those used, is not considered significant for the Bank.

The following tables show the financial instruments subject to offsetting according to IAS 32, for 2026 and 2025:

As of June 30, 2026	Linked financial instruments offset on the balance sheet		Remaining balance of financial instruments not linked and/or not subject to offsetting	Amount in the statement of financial position
	Amounts offset on the balance sheet	Net amount in the balance sheet		
	Ch\$mnn	Ch\$mnn	Ch\$mnn	Ch\$mnn

Total	-	14,012,950	34,245,927	48,258,877

(*) In these items there are guarantees for Ch\$1,985,631 million, and Ch\$1,433,944 million for asset and liability derivatives, respectively.

In order to reduce credit exposure in its financial derivatives transactions, the Bank has entered into bilateral collateral agreements with its counterparties, which establish the terms and conditions under which these transactions operate. In generally, collateral (received/delivered) is issued when the net fair value of the financial instruments held exceeds the thresholds defined in the respective contracts.

The financial derivative contracts are detailed according to their collateral agreement:

Financial derivatives contracts and hedge accounting	As of June 30, 2026		As of December 31, 2025	
	Assets	Liabilities	Assets	Liabilities
	Ch\$m	Ch\$m	Ch\$m	Ch\$m

The fair value of derivative instruments is shown in Chilean pesos and does not include their notional value.

NOTE 47 - RISK MANAGEMENT AND REPORTING*General information*

For Banco Santander, risk management is the core of its business. The Bank's corporate governance continually optimizes its risk management and control system, based on the Basel Committee's principles, an integrated risk culture, a robust governance structure, and advanced tools, with the goal of ensuring responsible conduct in response to economic changes, customer demands, and legal regulations. The Board of Directors assumes ultimate responsibility in this area, including the approval of risk appetite, the regulatory framework, and the promotion of a consistent organizational culture.

The Bank's risk management and control are based on the following principles, that consider both regulatory requirements and market best practices and must be applied at all times:

1. All employees are responsible for risk management and must know and understand the risks generated by their daily activities, avoiding taking risks whose impact is unknown or exceeding the limits of the Bank's risk appetite.
2. Senior management is involved, ensuring consistent risk management and control through its conduct, actions, and communications. Additionally, it will promote the risk culture, assessing its degree of implementation and ensuring that the profile remains within the levels defined in the Bank's risk appetite.
3. Independence of risk management and control functions.
4. An anticipatory and comprehensive approach to risk management and control across all businesses and types of risks.
5. Correct and complete information management that allows risks to be identified, evaluated, managed and communicated appropriately to the corresponding levels

These principles, along with a series of interrelated tools and processes in its strategy, such as risk appetite, risk profile assessment, scenario analysis, and risk reporting framework, as well as annual budgeting processes, constitute a holistic control structure for the entire Bank.

The Bank's risk classification enables effective risk management, control, and communication. Its corporate risk framework includes the following:

- Credit risk: It is the risk of financial loss resulting from the default or deterioration of the credit quality of a client or counterparty for whom Banco Santander Chile has financed or with whom it has assumed a contractual obligation.
- Market risks: These arise from holding financial instruments whose value may be affected by changes in market conditions; they generally include the following types of risk:
 - Foreign exchange risk: which arises as a result of fluctuations in the exchange rate between currencies.
 - Fair value risk due to interest rate fluctuations: which arises as a result of fluctuations in market interest rates.
 - Price risk: which arises as a result of changes in market prices, either due to factors specific to the instrument itself or due to factors that affect all instruments traded in the market.
 - Inflation risk: which arises as a result of changes in inflation rates in Chile, the effect of which would apply primarily to financial instruments denominated in UF.
- Liquidity risk: It is the risk of not having the necessary liquid financial resources to meet obligations when they mature, or of obtaining them only at a high cost.
- Operational risk: It is the risk of loss due to inadequate or failed internal processes, employees, and systems, or due to external events. This includes legal risk and conduct risk.
- Capital risk: It is the risk that the Bank has insufficient capital in quantity and/or quality to meet the minimum requirements for operating as a bank, meeting market expectations regarding its creditworthiness, and supporting the growth of its business and any strategies that may arise in accordance with its strategic plan.

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued**Risk governance**

The Bank has a robust risk governance structure that pursues effective risk profile control, in accordance with the appetite defined by the Board of Directors and based on the distribution of roles among the three lines of defense and a solid committee structure. The Bank's three lines of defense model seeks to ensure effective risk management and control:

First line: business lines and all other risk-generating functions constitute the first line of defense. These functions must ensure that the risks generated are aligned with the approved risk appetite and corresponding limits. Any unit that generates risk has primary responsibility for managing that risk.

Second Line: the risks, compliance, and conduct functions. Their role is to independently oversee and challenge the risk management activities performed by the first line of defense. These functions ensure risk management in accordance with the appetite defined by the Board and promote a strong risk culture throughout the organization.

Third Line: the Internal Audit function periodically assesses the appropriateness and effectiveness of policies, methodologies, and procedures for managing and controlling all risks. The risk, compliance, and internal audit functions enjoy an appropriate level of separation and independence and have direct access to the Board of Directors and its committees.

The governance applied in the Bank must promote efficient governance structures that ensure the participation of all relevant functions. Governance must also be compatible with local-level functions and with coordinated management and supervision.

The main objectives of risk governance are:

- Enable effective and efficient risk decision-making.
- Oversee risk control.
- Ensure that risks are managed in accordance with the risk appetite defined by the Board.

The governance structure must separate risk management and control, to achieve these objectives:

- Governance reinforces the responsibility of the first line of defense in decision-making and ensures that all risk decisions have a formal approval process.
- For the second line of defense, governance provides an overview of all risks, regardless of who manages or controls them.

Risk government structure

The risk governance structure meets legal and regulatory requirements, which is characterized by an efficient governance structure that ensures the participation of all relevant areas, promoting clear and effective decision-making and accountability.

The responsibilities and membership of the most relevant committees within risk governance are:

1. **Board of Directors:** ultimately responsible for risk management and control. Its key responsibilities include approving the risk appetite and risk framework, and promoting a strong risk culture. To support the Board's management, there are five committees, which are established and amended according to the bank's needs. These committees report their activities to the Board periodically through meetings and subrogation schemes, statutes, formal minutes, and monitoring processes: the Directors and Audit Committee, the ALCO and Markets Committee, the Integral Risk Committee, the Appointments Committee, and the Compensation Committee.
2. **Integral Risk Committee (IRC):** is responsible for advising the Board of Directors on defining the risk appetite that business areas can assume, as well as overseeing the correct identification, measurement, and control of all risks that may affect the Bank.
3. **Executive Risk Committee:** responsible for risk management, in accordance with the powers delegated to it. This committee evaluates credit operations over a certain amount (operations of smaller amounts are evaluated by lower-level committees).
4. **Risk Control Committee:** responsible for risk control, determining whether businesses are managed in accordance with the risk appetite and providing a holistic view of all risks. This includes identifying and monitoring both current and emerging risks and their impact on the risk profile.

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

5. **Global Compliance Committee:** responsible for overseeing the management of the risks to which the Bank is exposed, including regulatory compliance risk, conduct risk, money laundering and terrorist financing risk, and reputational risk.
6. **Analysis and Resolution Committee (CAR):** responsible for defining and monitoring compliance with the policies, standards, and general and specific objectives regarding the prevention of money laundering and terrorist financing, in accordance with local laws and regulations, as well as those of the Santander Group

Risk assessment and identification

The Bank evaluates at least once a year all the types of risk to which it is exposed, allowing it to define the level to which it is exposed in each of them through a systematic and objective process.

Also, through a formal process, it reviews the evolution of each risk by analyzing qualitative and quantitative variables. The results are presented and discussed monthly at the highest management and supervisory levels.

In parallel, emerging risks are surveyed every six months, a process in which a large part of the organization participates. This process identifies the main potential risks that could jeopardize strategic planning from a holistic perspective, allowing for a prioritization of these risks based on an assessment of their impact on results/capital and the probability of occurrence. It is important to highlight that this process allows new concerns to be identified and made visible in order to contain them.

Key Risk Management and Control Processes

It is important to note that each of these key processes has demanding standards, which reflect international best practices.

→ Planning. Planning is the process by which business objectives are established. It must include the formulation of the types and levels of risk that the business is able and willing to assume to achieve those objectives.

→ Identification. Risk identification is an essential component for effective risk management and control. All employees are responsible for identifying the risks within their scope of work.

→ Assessment. Once identified, risks must be assessed.

→ Decision-making and execution. Decisions are necessary to manage the business risk profile within the limits approved in the planning phase and to achieve business objectives. Strategic decisions are also necessary to manage material and emerging risks.

→ Monitoring plan performance. Regular monitoring of business performance and comparing it with approved plans is an essential daily activity.

→ Measures to correct deviations from the plan and information processes. If the monitoring activity reveals deviations, or probable deviations, from performance beyond the approved ranges or alert levels, mitigation measures should be considered to return performance to acceptable levels.

CREDIT RISK

Credit risk is the risk of financial loss resulting from the default or deterioration of the credit quality of a client or counterparty for whom the Bank has financed or with whom it has assumed a contractual obligation. It is our most significant risk, both in terms of exposure and capital consumption.

Credit risk management

The Bank's credit risk identification, analysis, decision-making, and control processes are based on a complete view of the credit risk cycle, including the transaction, the client, and the portfolio. Credit risk identification enables active management and effective portfolio control. We identify and classify external and internal risks in each business and adopt corrective and mitigating measures when necessary, through the following processes:

1. Planning: Planning allows us to establish business objectives and define specific action plans in line with our risk appetite statement. Commercial strategic plans are a management and control tool defined by the business and risk areas for our credit portfolios. They determine commercial strategies, risk policies, resources, and infrastructure, ensuring a holistic view of the portfolios.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

2. Risk Assessment and Credit Rating Process: Credit approval criteria are generally based on a borrower's ability to meet his or her financial obligations. To determine this ability, we analyze the borrower's net cash flow or business income. Our credit quality assessment models are based on rating engines, which vary for each of our segments, which we monitor and compare to adjust the decisions and ratings we assign.
3. Scenario analysis: This allows for determining potential risks in credit portfolios, providing a better understanding of their behavior under different macroeconomic conditions, as well as anticipating and implementing management strategies to avoid future deviations from established plans and objectives.
4. Monitoring: Holistic monitoring of all clients facilitates monitoring of credit quality and early detection of impacts on risk evolution. Regular monitoring of business performance and its comparison with pre-established plans are essential in credit risk management. Our monitoring function uses a system that helps establish monitoring levels, policies, and specific actions for each client.
5. Credit risk mitigation techniques: Credit approval criteria are based on determining the borrowers' ability to pay to meet their financial obligations, without relying on guarantors or pledged assets as collateral. These are always considered a second source of recovery in the event of the failure of the first, and are defined as a reinforcing measure added to a credit transaction in order to mitigate the loss in the event of default.
6. Recovery management: Recovery management defines a strategy based on the economic environment, business model, and other specificities of local recovery. Effective and efficient recovery management requires segmenting our clients based on their characteristics and using new digital channels that support sustainable value creation.

The Board of Directors has delegated responsibility for credit risk management to the IRC and the Bank's risk departments, whose roles are summarized below:

- Formulation of credit policies, in consultation with the business units, covering collateral requirements, credit evaluation, risk rating, and reporting, documentation, and legal procedures in compliance with the Bank's regulatory, legal, and internal requirements.
- Establishing the authorization structure for the approval and renewal of credit applications. The Bank structures credit risk levels by placing limits on the concentration of that risk in terms of individual debtors, debtor groups, industry segments, and countries.
- Authorizations are assigned to the respective business unit officers (commercial, consumer, SME) for ongoing monitoring by Management. These limits are also reviewed periodically. Branch-level risk assessment teams regularly interact with clients; however, for large transactions, the parent company's risk teams, including the CIR, work directly with clients to assess credit risks and prepare credit applications.
- Limit exposure concentrations to clients and counterparties, by geographic area, industry (for receivables or loans), and by issuer, credit rating, and liquidity (for investments).
- Develop and maintain the Bank's risk classification, classifying risks according to the degree of exposure to financial loss faced by the respective financial instruments and focusing risk management specifically on the associated risks.
- Review and assess credit risk. The risk divisions are largely independent of the Bank's commercial division and assess all credit risks in excess of designated limits prior to approving loans to clients or prior to the acquisition of specific investments. Credit renewals and reviews are subject to similar processes.

Risk assessment teams interact regularly with our clients. For larger transactions, risk teams work directly with clients to assess credit risks and prepare credit applications.

Credit approval committees, which include risk and commercial staff, must ensure that each applicant meets the appropriate qualitative and quantitative parameters. The powers of each committee are defined by the Bank's Board of Directors.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

When preparing a credit application for a corporate client whose loans are approved on an individual basis, the Bank verifies several parameters such as debt service capacity (usually including projected cash flows), the client's financial history, and/or projections for the economic sector in which it operates. The risk division is closely involved in this process and prepares the client's credit application. All applications contain an analysis of the client's strengths and weaknesses, a rating, and a recommendation. Credit limits are not determined based on the client's outstanding balances, but rather on the direct and indirect credit risk of the financial group. For example, a corporation would be assessed along with its subsidiaries and affiliates.

Consumer loans are evaluated and approved by their respective risk divisions (individuals, SMEs). The evaluation process is based on an evaluation system known as Garra (Banco Santander-Chile), an in-house automated process based on a scoring system that includes the credit risk policies implemented by the Bank's Board of Directors. The loan application process is based on the collection of information to determine the client's financial situation and repayment capacity. The parameters used to evaluate the applicant's credit risk include several variables such as income level, length of current employment, debt indebtedness, and credit agency reports.

In the case of investments in debt instruments, the Bank assesses the probability of default of the issuers or counterparties using internal and external assessments, such as those by risk assessors independent of the Bank. Furthermore, the Bank adheres to a strict and conservative policy that ensures that the issuers of its investments and counterparties in derivative transactions are of the highest reputation.

Additionally, the Bank operates with several instruments that involve exposure to credit risk, which are not reflected in the Interim Consolidated Statements of Financial Position, such as, for example: guarantees and warranties, documentary letters of credit, guarantee notes and commitments to grant credits..

Guarantees and warranties represent an irrevocable payment obligation. If a guaranteed client fails to meet their obligations to third parties guaranteed by the Bank, the Bank will make the corresponding payments. Therefore, these transactions represent the same credit risk exposure as a regular loan.

Documentary letters of credit are commitments documented by the Bank on behalf of the client. These commitments are secured by the traded goods they relate to and have a lower risk than direct borrowing. Guarantee bonds are contingent commitments that become effective only if the client fails to perform the work agreed upon with a third party, guaranteed by them.

When it comes to credit commitments, the Bank is potentially exposed to losses equal to the total undrawn commitment. However, the probable loss is less than the total undrawn commitment. The Bank monitors the maturity period of credit lines because long-term commitments generally carry a higher credit risk than short-term commitments.

Additional provisions

Under FMC regulations, banks are allowed to establish provisions above the limits described above, in order to protect themselves from the risk of unpredictable economic fluctuations that could affect the macroeconomic environment or the situation of a specific economic sector. These provisions, in accordance with Chapter B-1, Section 9 of the FMC's CASB, will be reported as liabilities.

The Bank's Board of Directors approved the constitution of additional voluntary provisions, which amount to Ch\$156,098 million and Ch\$179,098 million as of June 30, 2026, and December 31, 2025, respectively.

Maximum exposure to credit risk

For financial assets recognized in the Interim Consolidated Statements of Financial Position, the credit risk exposure is equal to their carrying amount. For financial guarantees granted, the maximum credit risk exposure is the maximum amount the Bank would have to pay if the guarantee were enforced.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

The following is the distribution by financial asset of the Bank's maximum exposure to credit risk as of June 30, 2026, and December 31, 2025 without deducting collateral or credit enhancements received:

	Note	As of June 30, 2026	As of December 31, 2025
		Amount of exposure	Amount of exposure
		Ch\$mn	Ch\$mn
Deposits in banks	7	1,895,212	1,975,644
Cash in collection process	7	2,236,352	1,185,633
Financial assets held for trading at fair value through profit or loss	8		
Financial derivatives contracts		10,588,911	10,879,777
Debt instruments		511,221	714,628
Financial assets at fair value through other comprehensive income	11		
Debt instruments		4,622,947	3,598,366
Loans and receivables from clients		449,754	291,586
Financial derivative contracts for hedge accounting	12	304,348	261,192
Financial assets at amortized cost	13		
Rights under repurchase agreements		861,341	427,983
Debt instruments		5,676,311	5,525,242
Interbank loans		47,497	68,071
Loans and receivables from clients		39,995,732	39,523,603
Unrecognized loan/credit commitments:			
Letters of credit for goods movement transactions		320,336	249,140
Transactions related to contingent events		2,142,433	1,871,802
Immediately repayable unrestricted credit lines		10,793,346	10,584,496
Guarantees and sureties		466,716	556,196
Contingent loans linked to student loans (CAE)		201	235
Other credit commitments		242,890	246,564
Total		81,155,548	77,960,158

According to the CASB, provisions for interbank loan,s and Loans and receivables from customers, and contingent operations are determined according to the criteria defined in chapters B-1 to B-3 of the CASB. Meanwhile, Loans and receivables from customers and debt instruments measured at fair value through other comprehensive income, and debt instruments measured at amortized cost, their impairment is measured in accordance with Chapter 5.5 of IFRS 9. Impairment requirements do not apply to debt instruments measured at fair value through profit or loss. In the case of derivatives, the adjustment that reflects the counterparty credit risk (CVA) is included in their fair value. CVA is calculated considering the potential exposure to each counterparty in future periods.

The methodology established for determining provisions for loans (Interbank and Loans and receivables from customers) and contingent loans is set out in Note 2 of accounting principles, letter q). The methodology used to calculate provisions for Loans and accounts receivable from customers and debt instruments measured at fair value through other comprehensive income, and debt instruments measured at amortized cost, is described in Note 2, letter r). Information related to the concentration of credit risk is provided in Note 13, letters k, m and n.

For derivative instruments, as of June 30, 2026, the Bank's foreign exposure, including counterparty risk in the derivatives portfolio, was US\$1.23 million or 2% of total foreign exposure to countries with a rating above category 1, as shown in the table below. In the table below, as of June 30, 2026, exposure to derivative instruments is calculated using the credit equivalent risk, which is equal to the net replacement cost plus the maximum potential exposure, taking into account cash collateral that mitigates the exposure. Additionally, further details are provided below regarding our exposure to those countries with a rating above 1.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

As of June 30, 2026, the exposure, considering the fair value of derivative instruments, amounted to:

Domestic Loans	Ranking	Derivative instruments (Market-adjusted)	Deposits	Loans	Financial Investments	Total exposure
		US\$ Million	US\$ Million	US\$ Million	US\$ Million	US\$ Million
Hong Kong	2	-	11	4	-	15
México	3	1	-	-	-	1
China	2	-	35	-	-	35
Italia	2	-	1	-	-	1
Brazil	4	-	-	8	-	8
India	3	-	-	4	-	4
Total		1	47	16	-	64

Our exposure to Spain within the group is as follows:

Counterpart	Country	Classification	Derivative instruments (market-adjusted)	Deposits	Loans	Financial investments	Total exposure
en MMUS\$							
Banco Santander S.A.	España	1	219	21	-	-	240

(*) We include our exposure to Santander Hong Kong, BSCH Spain, and Santander NY as exposure to Spain.

Recognition and measurement of credit risk provisions

The Bank segments loans and contingent loans by borrower type and loan type, to a level appropriate for the application of the models.

The provisions required to cover loans, debt instruments, and contingent loan exposure are calculated and recorded monthly, based on the valuation models used and the type of transaction.

Provisions related to loans and receivables from customers/debt instruments measured at amortized cost and loans and receivables from customers at fair value through other comprehensive income are accounted as valuation accounts into respective items, and reporting net in the Consolidated Statement of Financial Position. Additional provisions and contingent loans provisions are reported as liabilities, in accordance with the FMC's directions.

Provisions for financial assets at fair value through other comprehensive income are presented in Note No. 11, provisions for financial assets at amortized cost are presented in Note No. 13, and special provisions for credit risk (contingent loans, country risk, additional provisions) are presented in Note No. 26.

Below is a summary of the financial assets and contingent loan exposure, subject to credit risk, and their respective provisions according to CASB standards (B1 to B3) as of June 30, 2026, and December 31, 2025:

As of June 30, 2026 (**) Ch\$mn	Financial assets before provisions					Established provisions

	Ch\$mnn	Ch\$mnn
Debt instruments at amortized cost	1,179	1,145
Repurchase agreements and securities lending	226	163
Debt instruments at fair value with changes in other comprehensive income	831	636
Loans and receivables at fair value with changes in other comprehensive income	4,939	4,487
Total	7,175	6,431

As of June 30, 2026 and December 31, 2025, the debt instrument portfolios include mainly instruments from the Chilean Central Bank and the General Treasury of the Republic, whose risk has been classified as low (without a significant increase in credit risk). A description of the IFRS 9 model applied to determine these provisions is found in Note 2, letter r). As of June 30, 2026 and December 31, 2025, the loans and receivables measured at fair value through other comprehensive income are high credit quality assets with assessed individually.

Defaulted loans

The defaulted loan portfolio includes debtors and their loans whose recovery is considered remote, as they show a deteriorated or non-existent payment capacity, have been subject to forced restructuring or are overdue by 90 days or more in the payment of interest or principal, and are classified as non-performing (C1 to C6).

	As of June 30, 2026		As of December 31, 2025	
	Financial assets	Provisions	Financial assets	Provisions
	Ch\$mnn	Ch\$mnn	Ch\$mnn	Ch\$mnn
Interbank loans	-	-	-	-
Commercial loans	1,370,404	495,322	1,239,565	445,806
Mortgage loans	1,162,806	152,935	1,100,421	149,476
Consumer loans	316,773	184,945	327,206	185,073
Contingent loan exposure	28,945	15,584	24,335	12,643
Total	2,878,928	848,786	2,691,527	792,998

Under the IFRS 9 model, the Bank presumes default when an asset is overdue for 90 days or more. As of the date of these financial statements, debt instruments and loans and receivables from customers measured at fair value through other comprehensive income are not in default.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued*Individual / Group assessment*

Group assessments are suitable for addressing a large number of transactions with low individual amounts, involving individuals or small businesses. The Bank groups borrowers with similar credit risk characteristics, assigning each group a specific probability of default and a recovery percentage based on a substantiated historical analysis. For this purposes, the Bank implemented the standard model for housing and commercial loans, and an internal model for consumer loans.

IFRS 9 establishes the recognition of lifetime expected credit losses when significant increases in credit risk are observed since initial recognition. In that context, a collective assessment may be required, as the increase in credit risk may become more evident before the financial assets becomes nonperforming, depending on the nature and information available for the financial assets. This is always based on the assumption that the information is available without cost or effort.

Impaired loans

The impaired loan portfolio includes defaulted loans (C1 to C6), plus loans B3 and B4, in the case of individual assessments. As of June 30, 2026 and December 31, 2025, the impaired loan portfolio amounts to Ch\$3,120,504 million and Ch\$2,789,706 million, respectively.

IFRS 9 defines an asset as credit-impaired when one or more events have occurred that have a negative impact on estimated future cash flows, evidenced by the issuer's financial difficulties, default, bankruptcy or financial reorganization, disappearance from an active market, among others. Debt instruments and loans and receivables from customers measured at fair value through other comprehensive income are not credit impaired.

Write-offs

Write-offs must be made when contractual rights to cash flows expire. A write-off constitutes a derecognition event from balance sheet and include the unpaid portion in the case of installment loans (no partial write-off). Additional circumstances could lead the write-off of a loan: when the Bank concludes that it will not obtain any cash flows, or there is no enforceable title, when the collection demand actions expire, or when the deadlines defined by the FMC are reached (see Note 2, letter q). As of June 30, 2026 and December 31, 2025, the written-off loans amounted to Ch\$350,942 million and Ch\$383,555 million, respectively.

IFRS 9 establishes that a write-off occurs when there is no reasonable expectation of recovering the contractual cash flows in whole or in part. A write-off constitutes a derecognition. Debt instruments and loans and receivables from customers measured at fair value through other comprehensive income do not include any written-off instruments/transactions.

Reconciliation of loans

The reconciliation between the opening and closing balances of provisions for financial assets measured at amortized cost and for contingent loans are presented in Note 13 letters f, g, h, i and j. The reconciliation between the opening and closing balances of provisions for financial assets measured at fair value with changes in other comprehensive income is presented in Note No. 11. The reconciliation of Interbank loans, commercial loans, mortgage loans, consumer loans, and exposure to contingent loans as of June 30, 2026, and December 31, 2025 is presented below:

The normal portfolio encompass debtors whose payment capacity allows them to meet their obligations and commitments, and this is not expected to change. When a debtor experiences financial difficulties or a significant deterioration in its payment capacity, and there are reasonable doubts about the full recovery of principal and interest under the contractual terms, the client is classified in the substandard portfolio. A client will be classified in the defaulted portfolio if the probability of credit recovery is considered remote, as its payment capacity is deteriorated or nonexistent.

The gross movements in financial assets at fair value through other comprehensive income and debt instruments at amortized cost as of June 30, 2026, and December 31, 2025, are presented below:

Guarantees and credit enhancements

Maximum exposure to credit risk is, in some cases, reduced by collateral, credit enhancements, and other actions that mitigate the Bank's exposure. Based on this, guarantees are a necessary but insufficient instrument in granting loans; therefore, the Bank's risk acceptance requires verification of other variables or parameters, such the payment capacity or generation of resources to mitigate the risk incurred.

The procedures for management and valuation of guarantees are included in the internal risk management policy. These policies establish the basic principles for credit risk management, and the management over guarantees received in operations with clients. In this regard, the risk management model includes assessing the existence of appropriate and sufficient guarantees that allow credit recovery when the debtor's circumstances prevent him from meeting his obligations.

The collateral valuation procedures are consistent with market best practices, which involve the use of appraisals for real estate guarantees, market value for stock market securities, the value of investment fund shares, etc. All received guarantees must be properly instrumented and appropriately registered, as well as have the approval of the Bank's legal divisions.

The Bank also has rating tools that allow ranking the credit quality of transactions or clients. The Bank historical databases, store internally generated information, that allow to study the probability of variation. Rating tools consider client segment analyzed (commercial, consumer, SME, etc.).

The maximum exposure to credit risk by type of loans, the associated collateral and the net exposure to credit risk as of June 30, 2026, and December 31, 2025 are presented below:

	As of June 30, 2026				As of December 31, 2025			
	Maximum credit risk exposure	Collateral	Net exposure	Allowance	Maximum credit risk exposure	Collateral	Net exposure	Allowance
	Ch\$m	Ch\$m	Ch\$m	Ch\$m	Ch\$m	Ch\$m	Ch\$m	Ch\$m
Interbank loans	47,565	47,565	-	68	68,178	39,128	29,050	107
Commercial loans	17,616,970	10,183,708	7,433,262	763,480	17,363,835	10,172,100	7,191,735	716,635
Residential Mortgage loans	17,696,111	17,333,307	362,804	188,165	17,443,563	17,167,022	276,541	185,038
Consumer loans	6,065,982	528,100	5,537,882	431,686	6,057,304	534,442	5,522,862	439,426
Contingent loans exposure	3,020,035	325,092	2,694,943	68,927	2,941,345	340,783	2,600,562	62,383
Total	44,446,663	28,417,772	16,028,891	1,452,326	43,874,225	28,253,475	15,620,750	1,403,589

Mortgage loans, by their nature, are secured by the property underlying the transaction, meaning that the property acquired by the customer guarantees the loan. When the Bank is required to take possession of or foreclose on a property, it is recorded as an "Asset received or awarded in lieu of payment," and the loan and its allowance are derecognized. The asset received is recorded at the lower of its carrying amount and its fair value (appraisal) less costs to sell, in accordance with IFRS 5, and is classified as held for sale. Once a loan has been derecognized, there are no further enforcement activities.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

The following are the impaired and non-impaired financial assets that have associated guarantees, collateral or credit enhancements in favor of the Bank as of June 30, 2026, and December 31, 2025:

	As of June 30, 2026	As of December 31, 2025
	Ch\$mn	Ch\$mn
Non-impaired financial assets		
Properties/mortgages	26,015,725	25,754,814
Investments and others	23,503,776	14,682,932
Impaired financial assets		
Properties/mortgages	3,535,668	3,358,646
Investments and others	437,927	358,671
Total	53,493,096	44,155,063

Financial derivative transactions are guaranteed by collateral agreements, which are deposited or transferred by one third party on behalf of another. These can be in cash or financial instruments, and reduce the counterparty's credit risk. These guarantees are monitored periodically (usually daily). Based on this, the net balance per counterparty is determined, and based on agreed-upon parameters, it is determined whether a collateral should be deposited or collected.

Credit limits for borrowers related to the Bank's ownership or management

In accordance with Article 84 No. 2 of the General Banking Law and UCBR 12-4, the total amount of credit granted to a group of related parties may not exceed 5% of the Bank's regulatory capital. This limit increases to 25 percent if the portion exceeding 5 percent consists of loans secured by collateral. In no case may the total of such credits granted by a bank exceed the amount of its regulatory capital. These loans may not be granted under more favorable conditions in terms of maturity, interest rates, or collateral than those offered to third parties in similar transactions.

A relationship with the Bank occurs when they have a direct, indirect, or third-party participation in the Bank's ownership, participate in the management, or are presumed to exist until sufficient evidence is presented to eliminate that presumption.

It will be understood that all natural and legal persons who can exert significant and permanent influence on the decisions of the other form the same group of persons related to the Bank, where there is a presumption that the credits granted to one person will be used for the benefit of another or a well-founded presumption that the persons maintain a relationship and form a unit of economic interest.

Companies related to a Bank include subsidiaries, support companies, and affiliates.

Legal guarantees include guarantees on tangible personal or real property, real estate, or any other property that can legitimately be accepted as collateral.

On June 30, 2026, and December 31, 2025, the credit limit for debtors related to the ownership or management of the Bank according to article 84 No. 2 of the GBL and Chapter 12-4 of the UCBR are as follows:

	As of June 30, 2026		As of December 31, 2025	
	%	Ch\$mn	%	Ch\$mn
Overall limit to related parties	7 %	509,551	7 %	487,292
Regulatory capital		7,279,306		7,047,321

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued**MARKET RISK**

Market risk arises as a result of market activity involving financial instruments whose value may be affected by fluctuations in market conditions and reflected in assets/liabilities changes and financial risk factors. The objective of market risk management is to manage and control exposure to market risk within acceptable parameters. There are four major risk factors that affect market prices: interest rates, exchange rates, price, and inflation.

- Interest Rate Risk: the exposure to losses arising from adverse changes in market interest rates that affect the value of instruments, contracts and other transactions recorded on the balance sheet.
- Exchange risk is the sensitivity to losses arising from adverse changes in the value of the exchange rates of foreign currencies, including gold, in which the instruments, contracts and other transactions recorded on the balance sheet are denominated.
- Inflation risk is the exposure to losses arising from adverse changes in the units or indices of readjustment defined in national currency. The instruments, contracts, and other transactions are denominated on the balance sheet.
- Price risk is generated by the volatility of rates or prices of assets or liabilities. Prepayment risk arises when, based on price movements, holders can alter the future cash flows of these assets or liabilities, leading to balance sheet mismatches that pose additional challenges to market risk management.

Market risk management

The measurement and control of market risks are the responsibility of Market Risk Area, which is part of the Risk Division. The appropriate committees approve the limits, with responsibility resting mainly with the ALCO. The Integral Risk Committee also reviews the principal market risks. The Financial and Capital Management areas, as part of the Financial Vice-Presidency, have the following functions, which are supervised and controlled by the ALCO and Risk Division:

- i. To optimize the cost of liabilities and seek the most efficient financing strategies, including issuing bonds and bank facilities.
- ii. Management of short- and long-term regulatory liquidity limits.
- iii. Inflation risk management and exposure.
- iv. To manage local and foreign currency rate risk.
- v. Capital adequacy and requirements.

Rate sensitivity is measured primarily using an analysis that quantifies the impact on earnings and the balance sheet of parallel movements in the real and nominal interest rate curve in Pesos and US dollars.

The Bank's internal management for measuring market risk is mainly based on analyzing the management of the following three components:

- Trading portfolio.
- Local currency financial management portfolio.
- Foreign currency financial management portfolio.

The Treasury manages the Bank's trading portfolios and ensures they remain within the loss limits determined, calculated and estimated by the Market Risk Area. The trading portfolio (measured at fair value through profit or loss) consists mainly of those investments measured at fair value, free of any restriction on their immediate sale and which are often bought and sold by the Bank to sell them in the short term to benefit from short-term price movements. The Financial Management's portfolios (measured at fair value through other comprehensive income) include all financial investments not considered in the trading portfolio.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

The roles that concern the trading portfolio comprise the following:

- i. applying Value-at-Risk (VaR) techniques to measure interest rate risk,
- ii. adjusting trading portfolios to market and the measurement of daily profit and loss from trading activities,
- iii. comparing the actual VAR with the established limits,
- iv. establishing loss control procedures for losses above predetermined limits, and
- v. providing information on trading activities to the ALCO, other members of the Bank's management, and the Global Risk Department.

The functions regarding financial management portfolios entail the following:

- i. Applying sensitivity simulations (as explained below) to measure the interest rate risk of local currency activities and the potential loss predicted by these simulations and
- ii. Providing the respective daily reports to the ALCO, other members of the Bank's Management, and the Global Risk Department.

Market risk – Trading portfolio

The Bank applies VaR methodologies to measure exchange rate risk and sensitivity to interest rates of the trading portfolio. The Bank has a consolidated commercial position comprised of fixed income investments and foreign currency trading. This portfolio is essentially composed of bonds from the Central Bank of Chile, mortgage bonds and low risk locally issued corporate bonds. At the end of the year, the trading portfolio did not contain investments in equity.

For the Bank, the VaR estimate is carried out using a historical simulation methodology, which consists of observing the behavior of the losses and gains that would have occurred with the current portfolio using the market conditions of a predetermined historical period. From that information, the maximum loss is inferred with a certain level of confidence. The methodology has the advantage of accurately reflecting the historical distribution of market variables and of not requiring any specific probability distribution assumptions. All VaR measures are intended to determine the distribution function for the change in the value of a given portfolio, and once this distribution is known, to calculate the percentile related to the necessary confidence level, which will be equal to the value at risk in virtue of those parameters. As calculated by the Bank, the VaR is an estimate of the maximum expected loss of the market value of a given portfolio over a 1-day horizon at a confidence level of 99.00%. It is the maximum one-day loss that the Bank could expect to suffer on a given portfolio with the 99.00% confidence level. In other words, it is the loss that the Bank would expect to exceed only 1.0% of the time. VaR provides a single estimate of market risk that is not comparable from one market risk to another. Returns are calculated using a time window of 2 years or at least 520 data points obtained from the VaR calculation reference date backward in time.

The Bank does not calculate three separate VaRs. Instead, a single VaR is calculated for the entire trading portfolio, further segregated by risk type. The VaR program performs a historical simulation and calculates a Profit and Loss (P&L) statement for 520 data points (days) for each risk factor (fixed income, foreign exchange and equities). Then, the P&L of each risk factor is added together, and a consolidated VaR is calculated with 520 data points or days of data. Simultaneously, the VaR is calculated for each risk factor based on the individual P&L calculated for each factor. Moreover, a weighted VaR is calculated similarly, as described above, but gives a higher weighting to the most recent 30 data points. As a result, the higher of the two VaRs is reported. The Bank uses VaR estimates to warn if statistically estimated losses in the trading portfolio exceed prudent levels and, therefore, certain predetermined limits are in place.

Limitations of the VaR model

In applying this methodology for calculation, no assumptions are made about the distribution probability of changes in the risk factors; instead, the historically observed changes are used to generate scenarios for the risk factors under which each portfolio item will be valued. The definition of a valuation function $f_j(x_i)$ for each instrument j is necessary, preferably the same as the one used to calculate the market value and daily position results. This valuation function shall be applied to generate simulated prices for all instruments in each scenario.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

Furthermore, the VaR methodology should be interpreted considering the following limitations:

- Market rate and price changes may not consist in independent and identically distributed random variables, nor may they have a normal distribution. The normal distribution assumption, in particular, may underestimate the probability of extreme market movements.
- The historical data used by the Bank may not provide the best estimate of future joint distribution of changes in risk factors. Any modification of the data may be inappropriate. In particular, the use of historical data may fail to capture the risk of possible extreme and adverse market fluctuations regardless of the time frame used;
- A 1-day time horizon may not fully capture those market risk positions that cannot be liquidated or hedged within one day. It would not be possible to liquidate or hedge all positions in one day;
- The VaR is calculated at the end of negotiations, but trading positions may change substantially during the trading day;
- The use of a 99% confidence level does not consider or make any representation about losses that may occur beyond this confidence level, and
- The VaR model does not capture all the complex effects of risk factors on the value of positions or portfolios and, therefore, may underestimate potential losses.

As of June 30, 2026, and December 31, 2025, the Bank did not exceed the VaR limits of the trading portfolio's, considering the three components: fixed-income, equity, and foreign currency investments.

The Bank performs back-testing daily and generally finds that trading losses exceed the estimated VaR almost once every 100 trading days. At the same time, a limit was set on the maximum acceptable VaR on the trading portfolio. As of June 30, 2026, and December 31, 2025, the Bank has remained within its VaR threshold, even in instances where the actual VaR exceeded the estimated VaR.

The high, low and average levels for each component and each year were as follows:

VAR	As of June 30,	
	2026 US\$m	2025 US\$m
Consolidated		
High	2.89	3.31
Low	0.88	1.35
Average	1.79	2.03
Fixed income investments		
High	2.50	1.51
Low	0.85	0.92
Average	1.67	1.21
Variable income investments		
High	–	–
Low	–	–
Average	–	–
Foreign currency investments		
High	1.77	2.75
Low	0.06	0.75
Average	0.47	1.53

Market risk – Local and foreign financial management

The Bank's financial management portfolio includes most of the Bank's assets and non-trading liabilities, including the loan portfolio. The Bank's commercial strategies (structural risk) heavily influence these portfolios' investment and funding decisions.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

The Bank uses sensitivity analysis to measure the market risk of local and foreign currency (not included in the trading portfolio). The Bank conducts a scenario simulation, which is calculated as the difference between the present value of the flows in the chosen scenario (curve with a parallel movement of 100 bps in all segments) and their value in the baseline scenario (current market). All items in local currency indexed to inflation (UF) are adjusted by a sensitivity factor of 0.57, representing a yield curve shift by 57 basis points in real rates and 100 basis points in nominal rates. The same scenario is conducted for net foreign currency positions and interest rates in US dollars. The Bank has also set limits on the maximum loss these interest rate movements can have on budgeted capital and net interest income for the year. To determine the consolidated limit, the foreign currency limit is added to the local currency limit for both the net financial loss limit and the capital loss and reserves limit using the following formula:

Bounded limit = square root of $a^2 + b^2 + 2ab$, in which:

a: limit in national currency.

b: limit in foreign currency.

Since it is assumed that the correlation is 0. $2ab = 0$.

Limitations of sensitivity models

The most important assumption is using a change of 100 basis points in the yield curve (57 basis points for real rates). The Bank uses a change of 100 basis points as sudden changes of this magnitude are considered realistic. In addition, the Global Risk Department has also established comparable country limits to compare, monitor and consolidate market risk by country in a realistic and orderly manner.

Furthermore, the methodology of sensitivity simulations should be interpreted considering the following limitations:

- The scenario simulation assumes that the volumes remain on the Bank's Interim Consolidated Statements of Financial Position and are always rolled over at maturity, omitting the fact that certain credit risk considerations and prepayments may affect the maturity of certain items.
- This model assumes an equal change across the entire yield curve and does not consider different movements for different maturities.
- The model does not consider the sensitivity of volumes resulting from changes in interest rates.

Limits on budgeted finance income losses are calculated based on expected finance income for the year that cannot be obtained. This means the actual percentage of finance income at risk could be higher than expected.

Market Risk - Financial Management Portfolio as of June 30, 2026, and December 31, 2025:

	As of June 30, 2026		As of December 31, 2025	
	Effect on financial income	Effect on capital	Effect on financial income	Effect on capital
Financial management portfolio - local currency (in Ch\$mnn)				
Loss limit	98,072	343,819	175,196	370,271

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued*Inflation risk*

The Bank's assets and liabilities are indexed according to the Unidad de Fomento (UF) variation. The Bank has, in general, more assets than liabilities in UF. Therefore, moderate rises in inflation have a positive effect on interest income from inflation adjustments, while a fall in the UF value negatively impacts the Bank's net interest margin. To manage this risk, the Assets and Liabilities Committee limits the difference between UF-denominated assets and liabilities, which may not exceed 30% of the Bank's interest-earning assets. Financial Management manages this mismatch on a day-to-day basis, and the limits are calculated and monitored by the Market Risk Division.

Market Risk items and their measurement

Market Risk Exposure is measured and monitored using the difference between the foreign currency asset and liability balances (net position) and the cash flows payable (associated with liability items) and cash flows receivable (associated with asset items) in the Trading and Banking Books for a given period. Foreign currency items and term mismatches are exposed to different adjustment factors, sensitivities, and rate changes. The Board of Directors of Banco Santander Chile presented and approved the Market Risk Exposure Policy on a Standardized Basis.

The following risks will determine Market Risk Exposure:

- Interest Rate Risk.
- Foreign exchange Risk.
- Readjustment (Inflation) Risk.
- Currency Options Risk.

The following illustrates the market risk exposure according to the guidelines of the FMC and the Central Bank of Chile. The maximum exposure to long-term interest rate risk is 35% of regulatory capital and is approved by the Board of Directors. The maximum exposure to short-term interest rate risk is 55% of total net interest income and readjustment income plus interest rate sensitive fees:

	As of June 30, 2026	As of December 31, 2025
	Ch\$mn	Ch\$mn
Market risk of the trading book		
Exposure to interest rate risk	617,685	565,138
Exposure to foreign currency risk	3,897	4,484
Exposure to foreign currency options	1,055	1,896
Total exposure of the trading portfolio	622,637	571,518
10% of Risk Weighted Assets (RWA)	778,291	714,397
Subtotal	1,400,928	1,285,915
Limit = Regulatory capital	7,279,307	7,047,322
Available margin	5,878,379	5,761,407
Short-term exposure to interest rate risk	107,513	101,913
Exposure to readjustment (inflation) risk	216,262	153,766
Short-term risk of the banking book	323,775	255,679
Limit = 55% of total net interest income + fees sensitive to interest rates	1,046,825	1,008,348
Available margin	723,050	752,669
Long-term exposure to interest rate risk	787,719	728,870
Limit = 35% of regulatory capital	2,547,757	2,466,563
Available margin	1,760,038	1,737,693

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

To fulfill its functions, the Integral Risk Committee works directly with the Bank's control and risk departments whose joint objectives include:

- Evaluate those risks that, due to their size, could compromise the Bank's solvency, or that potentially present significant operational or reputational risks;
- Ensure that the Bank is equipped with the means, systems, structures and resources in accordance with the best practices that allow the implementation of the risk management strategy;
- Ensure the integration, control and management of all the Bank's risks;
- Execute the application throughout the Bank and its businesses of homogeneous risk principles, policies and metrics;
- Develop and implement a risk management model in the Bank, so that risk exposure is adequately integrated into the different decision-making processes;
- Identify risk concentrations and mitigation alternatives, monitor the macroeconomic and competitive environment, quantifying sensitivities, and the foreseeable impact of different scenarios on risk positioning; and
- Manage the structural risks of liquidity, interest rates and exchange rates, as well as the Bank's own funding base.

To meet the aforementioned objectives, the Bank (Management and ALCO) carries out several activities related to risk management, which include: calculating the risk exposures of the different portfolios and/or investments, considering mitigating factors (guarantees, netting, collaterals, etc.); calculate the probabilities of expected loss for each portfolio and/or investments; assign loss factors to new operations (rating and scoring); measure the risk values of portfolios and/or investments based on different scenarios through historical simulations; establish limits on potential losses based on the different risks incurred; determine the possible impacts of structural risks on the Bank's Interim Consolidated Statements of Financial Position; set the limits and alerts that guarantee the Bank's liquidity; and identify and quantify operational risks by business lines and thus facilitate their mitigation through corrective actions.

LIQUIDITY RISK

This refers to the possibility that an entity may not be able to meet its payment commitments or may have to resort to raising funds on burdensome terms.

Liquidity risk management

The Bank's approach to liquidity management is to ensure, to the extent possible, that it always has sufficient resources to meet its obligations as they fall due under normal circumstances and stress conditions without incurring unacceptable losses or risking damage to the Bank's reputation.

The Financial Management area manages liquidity risk by using a portfolio of liquid assets to ensure that the Bank always maintains sufficient liquidity to cover short-term fluctuations and long-term funding while complying with internal liquidity regulatory requirements. The Financial Management area receives information from all business units on the liquidity profile of their financial assets and liabilities, as well as a breakdown of other projected cash flows from future business. Based on this information, the area maintains a portfolio of short-term liquid assets, consisting mainly of liquid investments, loans and advances to other banks, to ensure that the Bank has sufficient liquidity. The liquidity needs of the business units are covered by short-term transfers from Financial Management to cover short-term fluctuations and long-term funding to meet all structural liquidity needs.

Accordingly, the Board sets limits on a minimum portion of maturing funds available to meet such payments and on a minimum level of interbank operations and other lending facilities that should be available to cover unexpected demands for withdrawals of liquidity. This is reviewed periodically by the ALCO whose functions include monitoring the strategies to manage liquidity risk. Setting these limits is conceived as a dynamic process that responds to the level of risk appetite deemed acceptable by the Bank and its entities.

The system of limits is sufficiently robust to be aware at all times of the level of exposure that each institution is incurring in, in terms of liquidity risks.

Besides the limits, the Bank includes alert indicators by the concentration of counterparties, type of products, and maturities in its management to diversify the funding sources and their maturity structure.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

The Bank monitors its liquidity position daily, determining future inflows and outflows. Furthermore, stress tests are performed at the end of each month, using a variety of scenarios covering both normal market conditions and market fluctuation (stress) conditions.

The Bank has a structure of internal liquidity limits that Financial Management and the Treasury must respect at all times. Market Risk Management calculates and monitors the consumption of internal limits, verifies compliance with them and communicates their status to senior management and the Board of Directors.

At the beginning of each calendar year, these limits are proposed by Market Risk Management, approved locally at the ALCO and then ratified at the highest Board level.

Liquidity limits and early warning indicators, and internally defined management measures can be differentiated into the following three groups:

- Limits associated with concentration and mismatches of cash flows and liquidity of the Bank's operations.
- Liquidity Management Tools, known as Structural Liquidity or Funding Tables, are used to determine the Bank's structural liquidity position. It also permits the Bank to actively manage its structural liquidity, since this is an essential mechanism to ensure a permanent funding of assets under optimal conditions.
- Early warning indicators are linked with concentration risks and are used as tools for detecting and anticipating potential liquidity stress situations and, if necessary, activating the Liquidity Contingency Plan.

The Market Risk Area establishes and updates the Bank's Liquidity Management Policy (LMP). Reviews and possible updates are conducted once a year. Nevertheless, it may be updated at the request of any areas affected by the LMP that have identified the need for modification. The Board approves the contents of the LMP.

The Market Risk Area provides all the necessary tools for the statistical analysis required by local liquidity regulations. It also assesses, at least once a year, whether the models are still valid. The Board of Directors must approve the conclusions of this analysis.

In periods of normal liquidity, Financial Management applies policies and makes arrangements to keep the Bank within internal and regulatory limits.

If a crisis has been identified, even at its mildest level, the Liquidity Crisis Committee applies the necessary policies to deal with potential liquidity shortfalls or restrictions, creates contingency plans to manage emergencies quickly, and reports such situations to senior management and the respective committees.

Liquidity risk measurement and control**1. Maturity mismatches subject to regulatory limits**

The Regulatory Liquidity Ratio measures and limits the mismatches of net income flows relative to capital. Under current regulations, the 30-day mismatch cannot exceed the Bank's core capital for both domestic and foreign currency by one time, and the 90-day mismatch cannot exceed it by two times.

2. Monitoring indicators and liquidity ratios subject to regulatory limits

An important component of liquidity risk management is High-Quality Liquid Assets (HQLA). These are balance sheet assets, mainly consisting of financial investments that are not pledged as collateral, have low credit risk, and have a deep secondary market. According to Basel III standards, these assets are divided into three tiers, with Level 1 assets being the most liquid and Level 3 the least liquid. Level 1 assets are mostly composed of bonds from the Republic of Chile, the Central Bank of Chile, and the United States Treasury.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

HQLA	As of June 30, 2026 Ch\$mnn	As of December 31, 2025 Ch\$mnn
Level 1: cash and cash equivalents	1,697,584	1,904,994
Level 1: fixed income	6,746,426	6,227,856
Level 2: fixed income	2,532	3,163
Total	8,446,542	8,136,013

3. Liquidity Coverage Ratio (LCR)

The Liquidity Coverage Ratio (LCR) measures liquid assets over 30-day net cash outflows. It is used by banks globally as part of the Basel III standards. Chilean banks were required, starting in 2019, to meet a minimum level of 60%, which was to gradually increase to 100% by 2022. For the 2025 fiscal year and onward, a minimum level of 100% was mandated.

The objective of the LCR is to promote the short-term resilience of banks' liquidity risk profiles. To this end, the LCR ensures banks have an adequate pool of unencumbered High-Quality Liquid Assets, which can be easily and immediately converted into cash in the private markets to cover short-term liquidity needs.

Liquidity coverage ratio	As of June 30, 2026 %	As of December 31, 2025 %
LCR	177	188

Banco Santander-Chile's LCR indicator was above the minimum required. This reflects the conservative liquidity policies imposed by the Board of Directors through the Assets and Liabilities Committee.

4. Net Stable Funding Ratio (NSFR)

This indicator is required by Basel III and provides a sustainable maturity structure of assets and liabilities so that banks maintain a stable funding profile concerning their activities.

The Central Bank of Chile and the FMC established a minimum NSFR level of 60% for 2022, gradually increasing to 100% by 2026. For 2026, the minimum required level is 100%.

Net stable funding ratio	As of June 30, 2026 %	As of December 31, 2025 %
NSFR	118	115

5. Information on liquidity position per the requirements of the Central Bank of Chile**i. Maturity mismatches**

The Central Bank of Chile published on March 8, 2022, Rules on the Management and Measurement of the Liquidity Position of Banks, which modernized liquidity regulation, aligning the published regulatory requirements of the FMC to Basel III standards.

According to the Central Bank, the liquidity position is measured and monitored through the difference between cash flows payable, which are associated with liability and expense account items, and cash flows receivable, which concern asset and income account items, for a given period or time frame, referred to as the maturity mismatch.

The liquidity policy on an Adjusted Basis was presented and approved by the Board of Directors of Banco Santander-Chile. Maturity mismatch calculations are performed separately for domestic and foreign currencies.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

Maturity mismatches shall be made in the following time frames:

- First time frame: up to 7 days inclusive.
- Second time frame: between 8 days and 15 days inclusive.
- Third time frame: between 16 and 30 days inclusive.

	As of June 30, 2026					
	Individual			Consolidated		
	Up to 7 days	Up to 15 days	Up to 30 days	Up to 7 days	Up to 15 days	Up to 30 days

ii. Composition of funding sources

The main sources of third-party funding are as follows:

Main sources of funding	As of June 30, 2026	As of December 31, 2025
	Ch\$mnn	Ch\$mnn
Deposits and other demand liabilities	13,943,771	14,075,590
Time deposits and other term equivalents	18,447,020	16,493,783
Interbank borrowing	3,378,281	3,434,237
Debt and regulatory capital instruments issued	9,868,741	10,277,061
Total	45,637,813	44,280,671

The Chilean Central Bank has statutory powers allowing it to demand banks to hold reserves of up to 40% on average for demand deposits and up to 20% for time deposits to implement monetary measures. Furthermore, as the aggregate amount of demand deposits exceeds 2.5 times the bank's regulatory capital, the bank must maintain a 100% 'technical reserve' against them in bonds and Central Bank's notes.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

As of June 30, 2026, and December 31, 2025, the Central Bank required the Bank to maintain a technical reserve of Ch\$0 for both periods.

The volume and composition of liquid assets are presented in item 2 above.

The liquidity coverage ratio is presented in item 3 above.

6. Maturity analysis of financial liabilities

The remaining contractual maturities of financial liabilities are provided in Note 45.

The liquidity management inherent in derivative and non-derivative financial liabilities is managed through various levers that enable this risk to be kept in line with the profile defined by the Bank while at the same time making efficient use of available liquidity. To this end, a high level of liquid assets is maintained, and the level of expected short-term income and expenditure is monitored daily, thus avoiding high concentrations of maturities. On the other hand, a very diversified funding matrix is maintained, both across product types and customer types.

OPERATIONAL RISK

Operational risk is defined as the risk of loss due to defects or failures of internal processes, employees and systems or external events. It covers risk categories such as operational incidents, cloud computing, cyber security, business continuity, and outsourced services, both and strategic and non-strategic.

Operational risk is generated in all business and support areas and is inherent to all products, activities, processes and systems. For this reason, all employees are responsible for managing and controlling the operational risks generated by their activities. Our operational risk control and management model is based on a continuous process of identifying, assessing and mitigating risk sources, whether or not they have materialized, ensuring that risk management priorities are properly established.

Operational risk management

The operational risk model regulates the necessary elements for adequate management and control of operational risk, aligned with compliance with advanced regulatory standards and best management practices, and includes the following phases:

- strategy and planning;
- identification, assessment and monitoring of risks and internal controls;
- implementation and monitoring of mitigation measures;
- availability of information, adequate reporting and escalation of relevant issues.

The main operational risk tools used are:

- Internal events database. Recording operational risk events with financial impact (all losses are recorded, regardless of their amount) or non-financial impact (such as the regulatory impact on customers and/or services). This information:
 - allows root-cause analysis;
 - raises awareness of risks;
 - enables the escalation of relevant operational risk events to the senior management of the Risk Division with maximum immediacy;
 - facilitates regulatory reporting;
- Self-assessment of operational risks and controls. A qualitative process that assesses the main operational risks related to each function, the state of the control environment and their assignment to the different functions within the Bank, using the judgment and experience of a panel of experts from each function.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

The objective is to identify and assess material operational risks that could prevent business or support units from achieving their objectives. Once the risks and the internal controls that mitigate them have been assessed, mitigating measures are identified if risk levels are above tolerable.

This process integrates specific operational risk reviews that allow for comprehensive and widespread identification of risks, especially technological risks, fraud, supplier risks and factors that could lead to other operational risks and specific regulatory non-compliance.

- External events database. This involves quantitative and qualitative information of external operational risk events. The database allows for a detailed and structured analysis of relevant events in the sector, comparing the loss profile and the proper preparation of self-assessment exercises and scenario analysis.
- Analysis of operational risk scenarios. Its objective is to identify events with an extremely low probability of occurrence that could generate significant losses for the Bank and establish appropriate mitigation measures through the assessment and expert opinion of the business lines and risk managers.
- A statement establishing the Bank's commitment to controlling and limiting non-financial risk events that lead to or could lead to financial losses; fraud events; operational and technological incidents; legal and regulatory breaches; conduct issues, or reputational damage. Although a certain volume of losses is expected, unexpected high-severity losses due to a failure of controls are not acceptable.
- Internal audit, external audit and regulators' recommendations. They provide relevant independent information on inherent and residual risk and identify areas for improvement in controls and processes.
- Capital model. This is a model that captures the Bank's risk profile, based primarily on information gathered from the internal loss database, external data and scenarios. The main application of the model is to determine the economic capital for operational risk and the estimation of expected and stressed losses, which are used in the operational risk appetite.
- Other specific tools to further analyze and manage operational risks include assessing new products and services, managing business continuity plans, and updating the operational risk program's perimeter and quality review processes.

The Bank's operational risk management and reporting system support programs and tools focusing on governance, risk and compliance. It provides information for management and reporting and helps improve decision-making in operational risk management by consolidating information, simplifying the process, and avoiding duplication.

Operational continuity plan

Digital transformation is revolutionizing the way banks operate, presenting new business opportunities while also giving rise to a wide range of emerging risks, such as technology risks, cyber risks and an increasing reliance on suppliers, which increases exposure to events that may affect the delivery of services to our customers.

The Bank is highly committed to ensuring robust control of the environment as determined by the best industry standards. This seeks to strengthen our operational resilience to potentially disruptive events, thereby ensuring adequate service delivery to our customers and system stability.

One of the main pillars is a business continuity management system aimed at ensuring the continuity of business processes in the event of a disaster or major incident. This process identifies the potential impacts that threaten the entity, supplying the correct protocols and governance to ensure an effective response capability. Its main objectives are:

- To protect the integrity of people in a contingency situation.
- To ensure that core functions are performed, and the impact on service delivery to our customers is minimized in contingency events.
- To meet the Bank's obligations to its employees, customers, shareholders and other stakeholders.
- To comply with regulatory obligations and requirements.
- To minimize the entity's potential financial losses and impact on the business.
- To protect the brand image, credibility and trust in the entity.

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

- To reduce operational effects by providing effective procedures, priorities, and strategies for recovering and restoring business operations following a contingency.
- To contribute to stabilizing the financial system.

The pandemic challenged the business continuity planning frameworks and strategies. While some protocols had to be adapted, this crisis demonstrated that the Bank has a robust Business Continuity Management system.

Relevant mitigation measures

The Bank implements and monitors mitigation measures related to the main sources of risk through internal operation risk management tools and other external sources of information. Business transformation and digitalization bring new risks and threats, such as increased payment fraud and origination (credit) fraud. We improved control mechanisms and designed new products to mitigate these risks.

Strong authentication processes in the customer enrollment process and the reinforcement of anti-fraud alerts in origination are increasingly widespread resources to mitigate the risk of fraud.

In the case of cards, the use of chip and PIN cards in shops and ATMs, two-step authentication with one-time passwords (dynamic verification passwords), reinforced security at ATMs through the incorporation of physical protection and anti-skimming elements, as well as improvements in the logical security of these devices.

In the case of Internet banking, verification of online banking transactions with a second security factor of one-time passwords, implementation of specific protection measures for mobile banking, such as identification and registration of customer devices, monitoring of the security of the e-banking platform to prevent attacks on the systems, among others.

Cybersecurity

Cybersecurity threats are expected to increase. The financial sector is expected to be one of the main targets. With the increased reliance on digital systems, cybersecurity is one of the main non-financial business risks. Therefore, our goal is to make the Bank a cyber-resilient organization that can quickly resist, detect, and respond to cyber-attacks by constantly evolving and improving its defenses. In this area, the Bank continues to develop its control and monitoring framework in line with the best international practices.

Outsourcing of services

In order to be consistent with our digitization strategy, the Bank aspires to present its customers with the best solutions and products on the market. This implies increasing services provided by third parties and the intensive use of new technologies such as cloud services. In addition, due to increasing cyber risks and regulatory requirements, we have updated and strengthened the supplier management framework, internal control framework and risk culture to ensure that risks associated with third-party procurement are properly assessed and managed. The Bank has identified the suppliers that could present a higher level of exposure to our operations and the services provided to our customers. Accordingly, it has reinforced the monitoring of these suppliers to ensure that:

- They have an appropriate control environment, depending on the level of risk of their service.
- Business continuity plans are in place to ensure service delivery in case of disruptive events.
- They have controls to protect sensitive information processed during the delivery of their services.
- Contracts and agreements with third parties include the necessary clauses to protect the interests of the Bank and our clients, while at the same time covering existing legal obligations.
- There are exit strategies, including service reversion or migration plans, in the case of services with a strong impact on business continuity and high replacement complexity.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 47 - RISK MANAGEMENT AND REPORTING, continued

Insurance

To address operational risk and other risk types generated by the Bank's own operations, insurance has been procured for property damage, general civil liability, fraud, expenses arising from cybersecurity breaches, and third-party claims against executives, among others.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 48 - INFORMATION ON REGULATORY CAPITAL AND CAPITAL ADEQUACY INDICATORS

General Information

The Bank provides information on the objectives, policies, and processes for managing capital and regulatory capital, respectively, in accordance with paragraphs 134–136 of IAS 1.

Capital Description

The Conceptual Framework establishes a concept of Financial Capital and one of Physical Capital. In this regard, the Bank applies the concept of Financial Capital, which translates into the consideration of invested money or invested purchasing power; capital is synonymous with the entity's net assets or equity.

The definition of regulatory capital was changed in December 2021, and is now defined as follows:

- Paid-in capital from subscribed and paid common shares of the Bank;
- Premium paid for instruments included in this component of capital;
- Reserves, whether from earnings or not, from depreciation of perpetual bonds and expiry of perpetual bonds;
- Items under "other accumulated comprehensive income";
- Retained earnings from prior periods, profit (loss) for the year, net of provisions for minimum dividends, revaluation of perpetual bonds, and payment of interest and/or dividends on regulatory capital financial instruments issued;
- Non-controlling interest as indicated in the CASB.

Objectives

The Bank's main objectives in Capital Management include:

- Meeting internal capital and capital adequacy goals;
- Complying with regulatory requirements;
- Aligning the Bank's strategic plan with the capital expectations of external stakeholders (rating agencies, shareholders and investors, clients, supervisors, etc.);
- Supporting business growth and any strategic opportunities that may arise.

Policies

The Bank has an Asset and Liability Committee (ALCO), which is responsible for supervising, authorizing, establishing policies, and evaluating all aspects related to capital and solvency. The Board of Directors has delegated to ALCO the oversight and assessment of capital levels and returns consistent with the Bank's strategy. The Integral Risk Committee (IRC) monitors and is responsible for the primary and secondary metric limits based on the risk appetite.

Additionally, the Bank has developed the necessary policies to support the management and fulfillment of capital management strategies and objectives, including:

- Capital Adequacy Policy;
- Capital Planning Policy;
- Policy for Managing Capital Deterioration Situations;
- Capital Monitoring Policy;
- Dividend Policy and Basel III Implementation.

NOTE 48 - INFORMATION ON REGULATORY CAPITAL AND CAPITAL ADEQUACY INDICATORS, continued**Capital Management Processes**

Capital is managed in accordance with the risk environment, Chile's economic performance, and the economic cycle. The relevant Committee may adjust our current capital policies to address changes in the aforementioned risk environment.

Capital management is based on a Capital Framework aimed at ensuring that the level, structure, and composition of capital are adequate at all times, considering the Bank's risk profile and various scenarios. This framework ensures compliance with both minimum regulatory requirements and the Bank's risk appetite and Recovery Plan, aligning with the interests of all stakeholders and supporting the growth strategy defined by the Bank.

The capital model defines the functional and governance aspects related to capital planning, budget execution and monitoring, capital adequacy analysis, capital measurement, and capital-related reporting and disclosure. This model covers the main capital management activities:

1. Setting solvency and capital contribution targets aligned with minimum regulatory requirements and internal policies, to ensure a solid capital level consistent with the Bank's risk profile, and efficient use of capital to maximize shareholder value.
2. Developing a capital plan to meet these objectives in line with the strategic plan.
3. Assessing capital adequacy to ensure the capital plan aligns with the Bank's risk profile and risk appetite (including stress scenarios).
4. Developing the capital budget as part of the Bank's budgeting process.
5. Monitoring and controlling budget execution and developing action plans to correct any deviations from the budget.
6. Calculating capital metrics.
7. Preparing internal capital reports, as well as reports for supervisory authorities and the market.

Compliance with Capital Management Objectives

The Bank continuously evaluates its risk-return ratios through its core capital, effective equity, economic capital, and return on capital. Regarding capital adequacy, the Bank conducts its internal process based on the FMC standards in effect since December 1, 2021 (Basel III). Economic capital refers to the capital required to support all the risk arising from business activities at a given level of solvency.

The monitoring and oversight of capital metrics and their limits are carried out by the ALCO, which also evaluates capital levels and risk appetite on a monthly basis, in addition to monitoring the solvency ratio "Regulatory Capital / Risk-Weighted Assets," which, as of December 1, 2025, has been monitored on a fully loaded basis, considering capital requirements at 100% enforceability.

Quantitative Data on Capital Management

The Bank primarily manages its capital by increasing its effective equity through the accumulation of earnings. This approach enables it to maintain a minimum regulatory capital-to-risk-weighted-assets ratio of 16.61%, which is 3.98% percentage points above the required minimum

External Requirements*Minimum Required Capital*

According to the General Banking Law, as amended by Law 21,130, a bank must maintain a minimum of UF 800,000 (approximately Ch\$32,656 million or US\$35 million as of March 31, 2026) in paid-in capital and reserves, calculated in accordance with FMC regulations.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 48 - INFORMATION ON REGULATORY CAPITAL AND CAPITAL ADEQUACY INDICATORS, continued*Capital regulatory framework and updates*

According to the new General Banking Law (as updated by Law 21,130), the minimum capital requirements have increased both in amount and quality. The total regulatory capital remains at 8% of risk-weighted assets, but now includes credit, market, and operational risks. The minimum Tier 1 capital requirement has increased from 4.5% to 6.0% of risk-weighted assets, of which up to 1.5% can consist of Additional Tier 1 (AT1) capital—such as preferred shares or perpetual bonds, which may be convertible into common shares. Tier 2 capital is now set at 2% of risk-weighted assets. Chapter 21-1 of the UCBR defines the components of regulatory equity.

Additional capital requirements are incorporated through a capital conservation buffer of 2.5% of risk-weighted assets (UCBR 21-12). Furthermore, the Central Bank, subject to prior agreement with the FMC, may establish an additional countercyclical buffer of up to 2.5% of risk-weighted assets, in accordance with FMC regulations (UCBR 21-12). Both buffers must be composed of Common Equity Tier 1 capital. In addition, the FMC has been authorized—subject to the favorable agreement of the Board of the Central Bank of Chile to define, through regulation, new methodologies for calculating risk-weighted assets for credit risk (UCBR 21-6), market risk (UCBR 21-7), and operational risk (UCBR 21-8); the conditions for issuing hybrid AT1 instruments; the determination of capital charges for domestic systemically important banks; prudential deductions from regulatory capital; and to require additional measures, including higher capital, for banks that exhibit deficiencies in the supervisory capital assessment process (Pillar II).

Pillar II aims to ensure that banks maintain a level of capital consistent with their risk profile and to promote the development and use of sound risk monitoring and management processes. To this end, banks are responsible for developing an internal capital adequacy assessment process, and supervisors must review banks' strategies and internal assessments and intervene at an early stage if they are not satisfied with the outcome of this process. Supervisors may require additional capital above the minimum required to ensure a sufficient level to withstand risks, particularly during adverse credit cycles

According to the General Banking Law, banks must maintain a regulatory capital of at least 8% of risk-weighted assets, net of required credit losses, and a requirement for paid-in capital and reserves ("core capital") of at least 3% of total assets, also net of credit losses. Regulatory capital is defined as the aggregate of:

- The bank's paid-in capital and reserves, excluding capital attributable to subsidiaries and foreign branches, or core capital;
- Perpetual bonds and preferred shares referred to in Article 55 bis of the GBL, issued by the bank and valued at the issuance price, up to one-third of its core capital;
- Subordinated bonds, valued at their issuance price, with a 20% annual reduction starting six years before maturity, up to 50% of its core capital; and
- Additional provisions for credit losses, up to 1.25% of credit risk-weighted assets.

On January 16, 2026, the FMC reported on the application of the capital requirement under Pillar II. The statement indicated that the board approved Exempt Resolution No. 862 regarding this application, which stipulates that the Bank must maintain the additional capital requirement of 0.25%, applicable at the 50 percent level it has maintained since June 30, 2025.

On March 30, 2026, the FMC reported on the annual rating of systemically important banks and established requirements. The statement indicated that the board approved Resolution No. 3,399 regarding this rating, thus maintaining, for another year, the requirement for an additional 1.5% core capital charge for the bank.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 48 - INFORMATION ON REGULATORY CAPITAL AND CAPITAL ADEQUACY INDICATORS, continued

On April 30, 2026, the FMC announced that, following the completion of two public consultation processes, it had issued regulations updating the minimum capital, guarantee, liquidity, and leverage requirements applicable to Securities Intermediaries and Commodity Exchange Brokers. The regulations introduce a risk-weighted asset methodology, in accordance with the amendments introduced by Law No. 21,521 to Laws No. 18,045 and No. 19,220. These regulations, which also repeal General Rule No. 18 (NCG No. 18), Circular No. 632, and Circular No. 695, will become effective on March 1, 2027.

At its Financial Policy Meeting (FPM) held on November 19, 2024, the Board of the Central Bank of Chile agreed to maintain the Countercyclical Capital Buffer (CCyB) at 0.5% of risk-weighted assets, which had been activated on May 24, 2023. This requirement remained unchanged as of the end of June 2026. On May 18, 2026, the BCCh decided to continue the convergence of the CCyB toward its neutral level, setting it at 1% of risk-weighted assets, effective as of May 2028.

Compliance with external requirements

Regulatory capital and core capital are calculated based on the Interim Consolidated Financial Statements prepared in accordance with the CASB issued by the FMC. As a result of the merger between two predecessor institutions with a significant market share in the Chilean financial market, our current minimum regulatory requirement consists of a minimum regulatory capital-to-risk-weighted assets ratio of 12.63%. As of the reporting date, the Bank maintains a regulatory capital-to-risk-weighted assets ratio of 16.61%.

Period-to-period changes

Schedule of changes to minimum capital requirements:

	June 30, 2026	December 31, 2025
	%	%
Requirements		
Pillar II charge	0.13%	0.13%
Systemic Charge	1.50%	1.50%
Counter-cyclical Capital buffer	0.50%	0.50%
Capital Conservation	2.50%	2.50%
Tier T2	2.00%	2.00%
AT1	1.50%	1.50%
CET1	4.50%	4.50%
Total	12.63%	12.63%

As of December 1, 2025, the regulatory adjustments and exclusions set forth in UCBR 21-1 increased from a 65% to a 100% deduction, in accordance with the transitional provisions, thereby completing the phased implementation process of Basel III.

Other Announcements and Statements

Pillar III promotes market discipline and financial transparency through the disclosure of meaningful and timely information. This enables users to better understand the risk profile and capital structure of local banking institutions, thereby reducing information asymmetries.

On July 8, 2025, the FMC published Circular No. 2,365 - Adjustments to Chapter 21-13 of the UCBR for the determination of additional regulatory capital requirements for banking entities, as a result of the supervisory process known as Pillar II of Basel III. The new regulatory adjustments published introduce improvements to Chapter 21-13 of the UCBR, with the objective of facilitating the supervisory process and clarifying some aspects of the capital evaluation process. The adjustments will be incorporated partially, with an initial application starting with the reports reported in December 2025 and will finalize in the review of the ICAAP, which will be delivered in April 2027.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 48 - INFORMATION ON REGULATORY CAPITAL AND CAPITAL ADEQUACY INDICATORS, continued

- a. Refers to the value of investments in subsidiaries that are not consolidated. This applies only under local consolidation when the bank has foreign subsidiaries, with their value fully deducted from assets and CET1.
- b. Refers to the value of asset items that are deducted from regulatory capital, in accordance with section (a) of Title No. 3 of Chapter 21-30 of the UCBR.
- c. Refers to credit equivalents of derivative instruments, as per section (b) of Title No. 3 of Chapter 21-30 of the UCBR.
- d. Refers to contingent exposures, as established in section (c) of Title No. 3 of Chapter 21-30 of the UCBR.
- e. Refers to assets related to the intermediation of financial instruments on the bank's own behalf for third parties, which are within the bank's consolidation perimeter, as outlined in section (d) of Title No. 3 of Chapter 21-30 of the UCBR.
- f. Refers to credit risk-weighted assets, estimated according to Chapter 21-6 of the UCBR. If the bank is not authorized to use internal methodologies, it must report field 8.b as zero and include 8.a in field 11.a. If it is authorized, 8.b should be added to 11.a.
- g. Refers to market risk-weighted assets, as estimated under Chapter 21-7 of the UCBR.
- h. Refers to operational risk-weighted assets, estimated under Chapter 21-8 of the UCBR.
- i. Refers to non-controlling interest, based on the level of consolidation, up to 20% of shareholders' equity.
- j. Refers to assets classified as goodwill.
- k. Refers to asset balances from investments in non-core business entities not included in consolidation, in excess of 5% of owners' equity.
- l. For CET1 and T2, banks must estimate the equivalent value for each capital level as well as the fully applied value according to Chapter 21-1 of the UCBR. The difference between the equivalent and fully applied value must be weighted by the discount factor in effect at the reporting date, as per the transitional provisions in Chapter 21-1 of the UCBR. For AT1, any applicable discounts are applied directly.
- m. Provisions and subordinated bonds assigned to Additional Tier 1 capital (AT1), as defined in Chapter 21-2 of the UCBR.
- n. Provisions and subordinated bonds assigned to the equivalent definition of Tier 2 capital (T2), as set out in Chapter 21-1 of the UCBR.
- o. In accordance with transitional provisions, starting December 1, 2022, solvency requirements are also applied at the local consolidated level. Data at this level should be reported in this column. Banks without foreign subsidiaries should not complete these fields.
- p. Refers to additional core capital (CET1) for the creation of the capital conservation buffer, as established in Chapter 21-12 of the UCBR.
- q. Refers to additional core capital (CET1) for the establishment of the countercyclical buffer, per Chapter 21-12 of the UCBR.
- r. Refers to additional core capital (CET1) for banks classified as systemically important, according to Chapter 21-11 of the UCBR.
- s. Refers to additional capital for assessing the adequacy of effective equity (Pillar II), in accordance with Chapter 21-13 of the UCBR.

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

As of June 30, 2026, and 2025, and as of December 31, 2025

NOTE 48 - INFORMATION ON REGULATORY CAPITAL AND CAPITAL ADEQUACY INDICATORS, continued

- a. In the case of the leverage ratio, the minimum level is 3%, without prejudice to any additional requirements for systemically important banks that may be established pursuant to Chapter 21-30 of the UCBR. In the case of Common Equity Tier 1 capital, the Bank must maintain a minimum requirement equivalent to 4.5% of risk-weighted assets (RWA). In addition, the Bank applies the applicable systemically important bank surcharge of 1.5% and the Pillar II requirement of 0.08%. In the case of Tier 1 capital, the Bank must maintain a minimum requirement of 6%, plus the 1.5% systemically important bank surcharge and the Pillar II requirement of 0.01%. Finally, at the total regulatory capital level, the Bank must maintain a minimum requirement equivalent to 8% of RWA, plus the 1.5% systemically important bank surcharge and the Pillar II requirement of 0.13%.
- b. The capital buffer shortfall must be estimated in accordance with the provisions of Chapter 21-12 of the UCBR. This value determines the restriction on dividend distributions, if positive, pursuant to the provisions of the aforementioned Chapter. In the case of total regulatory capital, the capital conservation buffer of 2.5% and the countercyclical buffer of 0.5% must also be added.
- c. If the Bank is subject to an effective capital requirement pursuant to Article 35 bis of the General Banking Law, it must disclose such amount in this cell in accordance with the transitional provisions.
- d. Corresponds to the solvency classification established under Article 61 of the General Banking Law.
- e. Limit of 1.25%; the Bank uses standardized methodologies (field T1_8.a) in the estimation of credit risk-weighted assets (CRWA).
- f. Subordinated bonds recognized as Tier 2 capital may not exceed 50% of Common Equity Tier 1 capital (CET1), considering the deductions applied to these instruments pursuant to Chapter 21-1 of the UCBR.
- g. Additional Tier 1 capital (AT1) may not exceed one-third of Common Equity Tier 1 capital.
- h. Additional provisions and subordinated bonds could be temporarily recognized as AT1 capital through November 2023 for up to 1% of RWA, effective from December 1, 2021. This amount decreased annually by 0.5% in accordance with the transitional provisions of Chapter 21-2 of the UCBR.
