Flying through the city — safely!

[Airbus](#) imagined it. We built it.

MetroAir's Multicruiser is a next-gen guarded eVTOL powered by patented Rimfoil ducted rotor technology — 2/3 less drag, contained tip vortices, built for dense urban environments.

But we're not just building an aircraft.

We have patented the full system: Multicruiser + Hub Vertiports + AI-managed air corridors.

3 U.S. patents. Built in Korea. Raising now on Wefunder.
